Welcome to the world-wide family of Volvo owners. We trust that you will enjoy many years of safe driving in your Volvo, an automobile designed with your safety and comfort in mind. We encourage you to familiarize yourself with the equipment descriptions and operating instructions in this manual.

We also urge you and your passengers to wear seat belts at all times in this (or any other) vehicle. And, of course, please do not operate a vehicle if you may be affected by alcohol, medication or any impairment that could hinder your ability to drive.

Your Volvo is designed to meet all applicable federal safety and emission standards. If you have any questions regarding your vehicle, please contact your Volvo retailer or see the section "Contacting Volvo" in this manual’s "Introduction" chapter for information on getting in touch with Volvo in the United States and Canada.

About this manual
- Before you operate your vehicle for the first time, please familiarize yourself with the information found in the chapters "Your Driving Environment" and "During Your Trip."
- Information contained in the balance of the manual is extremely useful and should be read after operating the vehicle for the first time.
- The manual is structured so that it can be used for reference. For this reason, it should be kept in the vehicle for ready access.

Footnotes
Certain pages of this manual contain information in the form of footnotes at the bottom of the page. This information supplements the text that the footnote number refers to (a letter is used if the footnote refers to text in a table).

Display texts
There are several displays in the driver’s field of vision that show messages generated by various systems and functions in the vehicle. These texts are indicated in the Owner’s Manual by being in slightly larger type than the surrounding text and are printed in gray, (for example: Change doors unlock setting).

Decals
There are various types of decals in the vehicle whose purpose is to provide important information in a clear and concise way. The importance of these decals is explained as follows, in descending order of importance.

Risk of injury

Black ISO symbols on a yellow warning background, white text/image on a black background. Decals of this type are used to indicate potential danger. Ignoring a warning of this type could result in serious injury or death.
Risk of damage to the vehicle

White ISO symbols and white text/image on a black or blue warning background and space for a message. If the information on decals of this type is ignored, damage to the vehicle could result.

Information

White ISO symbols and white text/image on a black background. These decals provide general information.

NOTE

The decals shown in the Owner’s Manual are examples only and are not intended to be reproductions of the decals actually used in the vehicle. The purpose is to give an indication of how they look and their approximate location in the vehicle. The applicable information for your particular vehicle can be found on the respective decals in the vehicle.

Types of lists used in the manual

Procedures

Procedures (step-by-step instructions), or actions that must be carried out in a certain order, are arranged in numbered lists in this manual.

1 If there is a series of illustrations associated with step-by-step instructions, each step in the procedure is numbered in the same way as the corresponding illustration.

A Lists in which letters are used can be found with series of illustrations in cases where the order in which the instructions are carried out is not important.

1 Arrows with or without numbers are used to indicate the direction of a movement.

A Arrows containing letters are used to indicate movement.

If there are no illustrations associated with a step-by-step list, the steps in the procedure are indicated by ordinary numbers.

Position lists

1 Red circles containing a number are used in general overview illustrations in which certain components are pointed out. The corresponding number is also used in the position list’s description of the various components.
**Bullet lists**

Bullets are used to differentiate a number of components/functions/points of information that can be listed in random order.

For example:
- Coolant
- Engine oil

**Continued**

This symbol can be found at the lower right corner of an odd-numbered (right-hand) page to indicate that the current topic is continued on the following page.

**Options and accessories**

Optional or accessory equipment described in this manual is indicated by an asterisk.

Optional or accessory equipment may not be available in all countries or markets. Please note that some vehicles may be equipped differently, depending on special legal requirements.

Contact your Volvo retailer for additional information.

---

**NOTE**

- All information, illustrations and specifications contained in this manual are based on the latest product information available at the time of publication.
- Volvo reserves the right to make model changes at any time, or to change specifications or design without notice and without incurring obligation.
- Do not export your Volvo to another country before investigating that country's applicable safety and emission control requirements. In some cases it may be difficult or impossible to comply with these requirements. Modifications to the emission control system(s) may render your Volvo not certifiable for legal operation in the U.S., Canada and other countries.

---

**WARNING**

**CALIFORNIA proposition 65**

Engine exhaust, some of its constituents, and certain vehicle components contain or emit chemicals known to the state of California to cause cancer, and birth defects or other reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain or emit chemicals known to the State of California to cause cancer, and birth defects or other reproductive harm.

**WARNING**

Certain components of this vehicle such as air bag modules, seat belt pretensioners, adaptive steering columns, and button cell batteries may contain Perchlorate material. Special handling may apply for service or vehicle end of life disposal.

See [www.dtsc.ca.gov/hazardouswaste/perchlorate](http://www.dtsc.ca.gov/hazardouswaste/perchlorate).
**Shiftlock**
When your vehicle is parked, the gear selector is locked in the **P** (Park) position. To release the selector from this position, the ignition must be in mode II (see page 84) or the engine must be running. Depress the brake pedal, press the button on the front side of the gear selector and move the selector from **P** (Park).

**Anti-lock Brake System (ABS)**
The ABS system performs a brief self-diagnostic test when the engine has been started and driver releases the brake pedal. Another automatic test may be performed when the vehicle first reaches a speed of approximately 6 mph (10 km/h). The brake pedal will pulsate several times and a sound may be audible from the ABS control module. This is normal.

**Fuel filler door**
Press the button on the light switch panel (see the illustration on page 259) when the vehicle is at a standstill to unlock the fuel filler door. Please note that the fuel filler door will remain unlocked until the vehicle begins to move forward. An audible click will be heard when the fuel filler door relocks.

**Points to keep in mind**
- Do not export your Volvo to another country before investigating that country’s applicable safety and exhaust emission requirements. In some cases it may be difficult or impossible to comply with these requirements. Modifications to the emission control system(s) may render your Volvo not certifiable for legal operation in the U.S., Canada and other countries.
- All information, illustrations and specifications contained in this manual are based on the latest product information available at the time of publication. Please note that some vehicles may be equipped differently, depending on special legal requirements. Optional equipment described in this manual may not be available in all markets.
- Volvo reserves the right to make model changes at any time, or to change specifications or design without notice and without incurring obligation.

**Crash event data**
This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:
- How various systems in your vehicle were operating;
- Whether or not the driver and passenger safety belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling. These data can help provide a better understanding of the circumstances in which crashes and injuries occur.

**NOTE**
EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age, and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.
Furthermore, your vehicle is equipped with a number of computers whose task is to continuously control and monitor the vehicle’s operation. They can also register information during normal driving conditions if they detect a fault relating to the vehicle’s operation and functionality. Some of the stored information is required by technicians when carrying out service and maintenance to enable them to diagnose and rectify any faults that have occurred in the vehicle and to enable Volvo to fulfill legal and other regulatory requirements. This information may be stored in the vehicle’s computers for a certain period of time.

Volvo will not contribute to spreading the above-mentioned information to third parties without the consent of the vehicle’s owner. However, due to national legal requirements and regulations, Volvo may be compelled to provide information of this type to authorities such as law enforcement agencies or others who may assert a legal right to obtain such information.

Volvo and service and repair facilities with agreements with Volvo have access to the special technical equipment required in order to read and interpret the information stored by the vehicle’s computers. Volvo is responsible for ensuring that the information transmitted to Volvo during service and maintenance is stored and handled in a secure manner and that this handling is done in accordance with applicable legal requirements. For additional information, contact:

**Volvo Structural Parts Statement**
Volvo has always been and continues to be a leader in automotive safety. Volvo engineers and manufactures vehicles designed to help protect vehicle occupants in the event of a collision.

Volvos are designed to absorb the impact of a collision. This energy absorption system including, but not limited to, structural components such as bumper reinforcement bars, bumper energy absorbers, frames, rails, fender aprons, A-pillars, B-pillars and body panels must work together to maintain cabin integrity and protect the vehicle occupants.

The supplemental restraint system including but not limited to air bags, side curtain air bags, and deployment sensors work together with the above components to provide proper timing for air bag deployment.

Due to the above, Volvo Cars of North America does not support the use of aftermarket, alternative or anything other than original Volvo parts for collision repair.

In addition Volvo does not support the use or re-use of structural components from an existing vehicle that has been previously damaged. Although these parts may appear equivalent, it is difficult to tell if the parts have been previously replaced with non-OE parts or if the part has been damaged as a result of a prior colli-
sion. The quality of these used parts may also have been affected due to environmental exposure.

**Information on the Internet**
Additional information about your vehicle is available at [www.volvocars.com](http://www.volvocars.com).

In order to read a QR code, a QR reader is necessary, which is available as an app for a number of different cell phone and can be downloaded from the App Store or Android Market.

Volvo and the environment

Volvo is committed to the well being of its customers. As a natural part of this commitment, we care about the environment in which we all live. Caring for the environment means an everyday involvement in reducing our environmental impact. Volvo’s environmental activities are based on a holistic view, which means we consider the overall environmental impact of a product throughout its complete life cycle. In this context, design, production, product use, and recycling are all important considerations. In production, Volvo has partly or completely phased out several chemicals including CFCs, lead chromates, asbestos, and cadmium; and reduced the number of chemicals used in our plants 50% since 1991.

Volvo was the first in the world to introduce into production a three-way catalytic converter with a Lambda sond, now called the heated oxygen sensor, in 1976. The current version of this highly efficient system reduces emissions of harmful substances (CO, HC, NOx) from the exhaust pipe by approximately 95 – 99% and the search to eliminate the remaining emissions continues. Volvo is the only automobile manufacturer to offer CFC-free retrofit kits for the air conditioning system of all models as far back as the 1975 model 240. Advanced electronic engine controls and cleaner fuels are bringing us closer to our goal. In addition to continuous environmental refinement of conventional gasoline-powered internal combustion engines, Volvo is actively looking at advanced technology alternative-fuel vehicles.

When you drive a Volvo, you become our partner in the work to lessen the car’s impact on the environment. To reduce your vehicle’s environmental impact, you can:

- Maintain proper air pressure in your tires. Tests have shown decreased fuel economy with improperly inflated tires.
- Follow the recommended maintenance schedule in your Warranty and Service Records Information booklet.
- Drive at a constant speed whenever possible.
- See a trained and qualified Volvo service technician as soon as possible for inspection if the check engine (malfunction indicator) light illuminates, or stays on after the vehicle has started.
- Properly dispose of any vehicle-related waste such as used motor oil, used batteries, brake pads, etc.
- When cleaning your vehicle, please use genuine Volvo car care products. All Volvo car care products are formulated to be environmentally friendly.

Recycling

As part of Volvo’s commitment to the environment, it is essential for the vehicle to be recycled in an environmentally sound way. Almost the entire vehicle can be recycled and for that reason, the vehicle’s final owner is requested to contact a Volvo retailer for information about approved and certified recycling facilities.

FSC®

The FSC® (Forest Stewardship Council®) symbol indicates that the wood pulp used in this publication comes from FSC® certified forests and other responsible sources.
**Important warnings**

**Driver distraction**

A driver has a responsibility to do everything possible to ensure his or her own safety and the safety of passengers in the vehicle and others sharing the roadway. Avoiding distractions is part of that responsibility.

Driver distraction results from driver activities that are not directly related to controlling the vehicle in the driving environment. Your new Volvo is, or can be, equipped with many feature-rich entertainment and communication systems. These include hands-free cellular telephones, navigation systems, and multipurpose audio systems. You may also own other portable electronic devices for your own convenience. When used properly and safely, they enrich the driving experience. Improperly used, any of these could cause a distraction.

For all of these systems, we want to provide the following warning that reflects the strong Volvo concern for your safety. Never use these devices or any feature of your vehicle in a way that distracts you from the task of driving safely. Distraction can lead to a serious accident. In addition to this general warning, we offer the following guidance regarding specific newer features that may be found in your vehicle:

- Never use a hand-held cellular telephone while driving. Some jurisdictions prohibit cellular telephone use by a driver while the vehicle is moving.
- If your vehicle is equipped with a navigation system, set and make changes to your travel itinerary only with the vehicle parked.
- Never program your audio system while the vehicle is moving. Program radio presets with the vehicle parked, and use your programmed presets to make radio use quicker and simpler.
- Never use portable computers or personal digital assistants while the vehicle is moving.

**Accessory installation**

- We strongly recommend that Volvo owners install only genuine, Volvo-approved accessories, and that accessory installations be performed only by a trained and qualified Volvo service technician.
- Genuine Volvo accessories are tested to ensure compatibility with the performance, safety, and emission systems in your vehicle. Additionally, a trained and qualified Volvo service technician knows where accessories may and may not be safely installed in your Volvo. In all cases, please consult a trained and qualified Volvo service technician before installing any accessory in or on your vehicle.
- Accessories that have not been approved by Volvo may or may not be specifically tested for compatibility with your vehicle. Additionally, an inexperienced installer may not be familiar with some of your car's systems.
- Any of your car’s performance and safety systems could be adversely affected if you install accessories that Volvo has not tested, or if you allow accessories to be installed by someone unfamiliar with your vehicle.
- Damage caused by unapproved or improperly installed accessories may not be covered by your new vehicle warranty. See your Warranty and Service Records Information booklet for more warranty information. Volvo assumes no responsibility for death, injury, or expenses that may result from the installation of non-genuine accessories.
Volvo's concern for safety

Safety is Volvo's cornerstone. Our concern dates back to 1927 when the first Volvo rolled off the production line. Three-point seat belts (a Volvo invention), safety cages, and energy-absorbing impact zones were designed into Volvo vehicles long before it was fashionable or required by government regulation.

We will not compromise our commitment to safety. We continue to seek out new safety features and to refine those already in our vehicles. You can help. We would appreciate hearing your suggestions about improving automobile safety. We also want to know if you ever have a safety concern with your vehicle. Call us in the U.S. at: 1-800-458-1552 or in Canada at: 1-800-663-8255.

Occupant safety reminders

How safely you drive doesn’t depend on how old you are but rather on:

- How well you see.
- Your ability to concentrate.
- How quickly you make decisions under stress to avoid an accident.

The following suggestions are intended to help you cope with the ever changing traffic environment.

- Never drink and drive.
- If you are taking any medication, consult your physician about its potential effects on your driving abilities.
- Take a driver-retraining course.
- Have your eyes checked regularly.
- Keep your windshield and headlights clean.
- Replace wiper blades when they start to leave streaks.
- Take into account the traffic, road, and weather conditions, particularly with regard to stopping distance.
- Never send text messages while driving.
- Refrain from using or minimize the use of a cell phone while driving.

Recall information

Information regarding recalls or other service campaigns is available on our website at www.volvocars.com/us/. Select the tab YOUR VOLVO and the heading RECALL INFORMATION will be displayed at the lower left side of the screen.
Reporting safety defects in the U.S.
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Volvo Cars of North America, LLC. If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your retailer, or Volvo Cars of North America, LLC. To contact NHTSA, you may either call the Auto Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153) or write to: NHTSA, U.S. Department of Transportation, Washington D.C. 20590. You can also obtain other information about motor vehicle safety from:

http://www.safercar.gov

Volvo strongly recommends that if your vehicle is covered under a service campaign, safety or emission recall or similar action, it should be completed as soon as possible. Please check with your local retailer or Volvo Cars of North America, LLC if your vehicle is covered under these conditions.

NHTSA can be reached at:
Internet:
http://www.nhtsa.gov
Telephone:
1-888-DASH-2-DOT (1-888-327-4236).

Reporting safety defects in Canada
If you believe your vehicle has a defect that could cause a crash or could cause injury or death, you should immediately inform Transport Canada in addition to notifying Volvo Cars of Canada Corp.

Transport Canada can be contacted at:
1-800-333-0510
Teletypewriter (TTY): 613 990-4500
Fax: 1-819-994-3372
Mailing Address: Transport Canada - Road Safety, 80 rue Noël, Gatineau, (Quebec) J8Z 0A1

http://www.safercar.gov
01 Safety

Seat belts

General information

Seat belts should always be worn by all occupants of your vehicle. Children should be properly restrained, using an infant, car, or booster seat determined by age, weight and height.

Volvo also believes no child should sit in the front seat of a vehicle.

Most states and provinces make it mandatory for occupants of a vehicle to use seat belts.

Seat belt pretensioners

All seat belts are equipped with pretensioners that reduce slack in the belts. These pretensioners are triggered in situations where the front or side impact airbags deploy, and in certain impacts from the rear. The front seat belts also include a tension reducing device which, in the event of a collision, limits the peak forces exerted by the seat belt on the occupant.

Fastening a seat belt

Buckling

Pull the belt out far enough to insert the latch plate into the receptacle until a distinct click is heard. The seat belt retractor is normally "unlocked" and you can move freely, provided that the shoulder belt is not pulled out too far.

Adjusting seat belt height (front seat belts only)

The height of the shoulder section of the seat belt must be correctly adjusted. Press the button and move the upper seat belt anchor to position it as high as possible so that the shoulder section of the belt is across the seat occupant’s collarbone and not across the throat.
Seat belt retractor

The seat belt retractor will lock up in the following situations:

- if the belt is pulled out rapidly
- during braking and acceleration
- if the vehicle is leaning excessively
- when driving in turns
- if the Automatic Locking Retractor/Emergency Locking Retractor (ALR/ELR) is activated

NOTE

Each seat belt (except for the driver’s belt) is equipped with the ALR/ELR function, which is designed to help keep the seat belt taut. ALR/ELR activates if the seat belt is pulled out as far as possible. If this is done, a sound from the seat belt retractor will be audible, which is normal, and the seat belt will be pulled taut and locked in place. This function is automatically disabled when the seat belt is unbuckled and fully retracted.

See also page 38 for information about using a seat belt’s ALR/ELR function to anchor a child seat.

When wearing the seat belt remember:

- The belt should not be twisted or turned.
- The lap section of the belt must be positioned low on the hips (not pressing against the abdomen).
- Make sure that the shoulder belt is rolled up into its retractor and that the shoulder and lap belts are taut.

Unbuckling the seat belt

To remove the seat belt, press the red section on the seat belt receptacle. Before exiting the vehicle, check that the seat belt retracts fully after being unbuckled. If necessary, guide the belt back into the retractor slot.

Seat belt maintenance

Check periodically that the seat belts are in good condition. Use water and a mild detergent for cleaning. Check seat belt mechanism function as follows: attach the seat belt and pull rapidly on the strap.

WARNING

Never use a seat belt for more than one occupant. Never wear the shoulder portion of the belt under the arm, behind the back or otherwise out of position. Such use could cause injury in the event of an accident. As seat belts lose much of their strength when exposed to violent stretching, they should be replaced after any collision, even if they appear to be undamaged.

WARNING

- Never repair the belt yourself; have this work done by a trained and qualified Volvo service technician only.
- Any device used to induce slack into the shoulder belt portion of the three-point belt system will have a detrimental effect on the amount of protection available to you in the event of a collision.
- The seat back should not be tilted too far back. The shoulder belt must be taut in order to function properly.
- Do not use child safety seats or child booster cushions/backrests in the front passenger’s seat. We also recommend that children who have outgrown these devices sit in the rear seat with the seat belt properly fastened.
Seat belts

Seat belt reminder

The seat belt reminder consists of an audible signal, an indicator light near the rearview mirror and a symbol in the instrument panel that alert all occupants of the vehicle to fasten their seat belts. The indicator light will be on for a total of 6 seconds from the time the ignition is switched on. There will also be an audible signal if the driver’s seat belt is not fastened.

If the front seat belts are unbuckled while the vehicle is in motion, the audible signal and warning light will be active for a total of 6 seconds.

Rear seats

The seat belt reminder in the rear seat has two additional functions:

- It provides information about which seat belts are fastened in the rear seat. A message will appear in the information display when a belt is being used. This message will disappear after approximately 6 seconds or can be erased by pressing the OK button on the left steering wheel lever.
- It also provides a reminder if one of the occupants of the rear seat has unbuckled his/her seat belt while the vehicle is in motion. A visual and audible signal will be given. These signals will stop when the seat belt has been re-buckled or can be stopped by pressing the OK button.
- The message Unbelted in rear seat will appear in the information display if one of the rear doors has been opened.

The message in the information display can always be accessed, even if it has been erased, by pressing the OK button to display stored messages.

Seat belt use during pregnancy

The seat belt should always be worn during pregnancy. But it is crucial that it be worn in the correct way. The diagonal section should wrap over the shoulder then be routed between the breasts and to the side of the belly. The lap section should lay flat over the thighs and as low as possible under the belly. It must never be allowed to ride upward. Remove all slack from the belt and ensure that it fits close to the body without any twists.

As a pregnancy progresses, pregnant drivers should adjust their seats and steering wheel such that they can easily maintain control of the vehicle as they drive (which means they must be able to easily operate the foot pedals and steering wheel). Within this context, they should strive to position the seat with as large
Seat belts

a distance as possible between their belly and the steering wheel.

**Child seats**
Please refer to page 40 for information on securing child seats with the seat belts.
Supplemental Restraint System (SRS)

General information

As an enhancement to the three-point seat belts, your Volvo is equipped with a Supplemental Restraint System (SRS). Volvo’s SRS consists of seat belt pretensioners, front airbags, side impact airbags, a front passenger occupant weight sensor, and inflatable curtains. All of these systems are monitored by the SRS control module. An SRS warning light in the instrument panel (see the illustration) illuminates when the ignition is in modes I or II, and will normally go out after approximately 6 seconds if no faults are detected in the system.

Where applicable, a text message will also be displayed when the SRS warning light illuminates. If this warning symbol is not functioning properly, the general warning symbol illuminates and a text message will be displayed. See also page 78 and page 80 for more information about indicator and warning symbols.

WARNING

• If the SRS warning light stays on after the engine has started or if it illuminates while you are driving, have the vehicle inspected by a trained and qualified Volvo service technician as soon as possible.

• Never try to repair any component or part of the SRS yourself. Any interference in the system could cause malfunction and serious injury. All work on these systems should be performed by a trained and qualified Volvo service technician.

WARNING

If your vehicle has become flood-damaged in any way (e.g., soaked carpeting/standing water on the floor of the vehicle), do not attempt to start the vehicle or insert the remote key into the ignition slot before disconnecting the battery (see below). This may cause airbag deployment which could result in serious injury. Have the vehicle towed to a trained and qualified Volvo service technician for repairs.

Before attempting to tow the vehicle:

1. Switch off the ignition for at least 10 minutes and disconnect the battery.

2. Follow the instructions for manually overriding the shiftlock system on page 120.
Front airbags

The front airbag system
The front airbags supplement the three-point seat belts. For these airbags to provide the protection intended, seat belts must be worn at all times.

The front airbag system includes gas generators surrounded by the airbags, and deceleration sensors that activate the gas generators, causing the airbags to be inflated with nitrogen gas.

As the movement of the seats' occupants compresses the airbags, some of the gas is expelled at a controlled rate to provide better cushioning. Both seat belt pretensioners also deploy, minimizing seat belt slack. The entire process, including inflation and deflation of the airbags, takes approximately one fifth of a second.

The location of the front airbags is indicated by SRS AIRBAG embossed on the steering wheel pad and above the glove compartment, and by decals on both sun visors and on the front and far right side of the dash.

The driver’s side front airbag is folded and located in the steering wheel hub.

The passenger’s side front airbag is folded behind a panel located above the glove compartment.

WARNING

- The airbags in the vehicle are designed to be a SUPPLEMENT to—not a replacement for—the three-point seat belts. For maximum protection, wear seat belts at all times. Be aware that no system can prevent all possible injuries that may occur in an accident.
- Never drive with your hands on the steering wheel pad/airbag housing.
- The front airbags are designed to help prevent serious injury. Deployment occurs very quickly and with considerable force. During normal deployment and depending on variables such as seating position, one may experience abrasions, bruises, swellings, or other injuries as a result from deployment of one or both of the airbags.
- When installing any accessory equipment, make sure that the front airbag system is not damaged. Any interference in the system could cause malfunction.
Supplemental Restraint System (SRS)

Front airbag deployment

- The front airbags are designed to deploy during certain frontal or front-angular collisions, impacts, or decelerations, depending on the crash severity, angle, speed and object impacted. The airbags may also deploy in certain non-frontal collisions where rapid deceleration occurs.
- The SRS sensors, which trigger the front airbags, are designed to react to both the impact of the collision and the inertial forces generated by it, and to determine if the intensity of the collision is sufficient for the seat belt pretensioners and/or airbags to be deployed.

However, not all frontal collisions activate the front airbags.

- If the collision involves a nonrigid object (e.g., a snow drift or bush), or a rigid, fixed object at a low speed, the front airbags will not necessarily deploy.
- Front airbags do not normally deploy in a side impact collision, in a collision from the rear or in a rollover situation.
- The amount of damage to the bodywork does not reliably indicate if the airbags should have deployed or not.

**WARNING**

- Do not use child safety seats or child booster cushions/backrests in the front passenger's seat. We also recommend that occupants under 4 feet 7 inches (140 cm) in height who have outgrown these devices sit in the rear seat with the seat belt fastened.  
- Never drive with the airbags deployed. The fact that they hang out can impair the steering of your vehicle. Other safety systems can also be damaged.
- The smoke and dust formed when the airbags are deployed can cause skin and eye irritation in the event of prolonged exposure.

Should you have questions about any component in the SRS system, please contact a trained and qualified Volvo service technician or Volvo customer support:

1 See also the Occupant Weight Sensor information on page 27. 

Rockleigh, New Jersey 07647
1-800-458-1552
www.volvocars.us
NOTE

- Deployment of front airbags occurs only one time during an accident. In a collision where deployment occurs, the airbags and seat belt pretensioners activate. Some noise occurs and a small amount of powder is released. The release of the powder may appear as smoke-like matter. This is a normal characteristic and does not indicate fire.

- Volvo’s front airbags use special sensors that are integrated with the front seat buckles. The point at which the airbag deploys is determined by whether or not the seat belt is being used, as well as the severity of the collision.

- Collisions can occur where only one of the airbags deploys. If the impact is less severe, but severe enough to present a clear injury risk, the airbags are triggered at partial capacity. If the impact is more severe, the airbags are triggered at full capacity.

WARNING

- Children must never be allowed in the front passenger’s seat.
- Occupants in the front passenger’s seat must never sit on the edge of the seat, sit leaning toward the instrument panel or otherwise sit out of position.
- The occupant’s back must be as upright as comfort allows and be against the seat back with the seat belt properly fastened.
- Feet must be on the floor, e.g., not on the dash, seat or out of the window.
**WARNING**

- No objects or accessory equipment, e.g. dashboard covers, may be placed on, attached to, or installed near the air bag hatch (the area above the glove compartment) or the area affected by airbag deployment (see the illustration on page 23).
- There should be no loose articles, such as coffee cups on the floor, seat, or dashboard area.
- Never try to open the airbag cover on the steering wheel or the passenger's side dashboard. This should only be done by a trained and qualified Volvo service technician.
- Failure to follow these instructions can result in injury to the vehicle occupants.
General information

Occupant Weight Sensor (OWS) indicator light

Disabling the passenger’s side front airbag

Volvo recommends that ALL occupants (adults and children) shorter than 4 feet 7 inches (140 cm) be seated in the back seat of any vehicle with a front passenger side airbag, and be properly restrained for their size and weight. For child safety recommendations, see page 38.

The Occupant Weight Sensor (OWS) is designed to meet the regulatory requirements of Federal Motor Vehicle Safety Standard (FMVSS) 208 and is designed to disable (will not inflate) the passenger’s side front airbag under certain conditions.

The OWS works with sensors that are part of the front passenger’s seat and seat belt. The sensors are designed to detect the presence of a properly seated occupant and determine if the passenger’s side front airbag should be enabled (may inflate) or disabled (will not inflate).

The OWS will disable (will not inflate) the passenger’s side front airbag when:

- the front passenger’s seat is unoccupied, or has small/medium objects in the front seat,
- the system determines that an infant is present in a rear-facing infant seat that is installed according to the manufacturer’s instructions,
- the system determines that a small child is present in a forward-facing child restraint that is installed according to the manufacturer’s instructions,
- the system determines that a small child is present in a booster seat,
- a front passenger takes his/her weight off of the seat for a period of time,
- a child or a small person occupies the front passenger’s seat.

The OWS uses a PASSENGER AIRBAG OFF indicator lamp which will illuminate and stay on to remind you that the passenger’s side front airbag is disabled. The PASSENGER AIRBAG OFF indicator lamp is located in the overhead console, near the base of the rearview mirror.

NOTE

When the ignition is switched on, the OWS indicator light will go on for up to 10 seconds while the system performs a self-diagnostic test.

However, if a fault is detected in the system:

- The OWS indicator light will stay on
- The SRS warning light (see page 22) will come on and stay on
- The message Pass. Airbag OFF Service urgent will be displayed in the information display.

WARNING

If a fault in the system is detected and indicated as described, be aware that the passenger’s side front airbag will not deploy in the event of a collision. In this case, the SRS system and Occupant Weight Sensor should be inspected by a trained and qualified Volvo service technician as soon as possible.
**01 Safety**

### Occupant Weight Sensor

**WARNING**

- Never try to open, remove, or repair any components in the OWS system. This could result in system malfunction. Maintenance or repairs should only be carried out by an a trained and qualified Volvo service technician.
- The front passenger’s seat should not be modified in any way. This could reduce pressure on the seat cushion, which might interfere with the OWS system’s function.

<table>
<thead>
<tr>
<th>Passenger’s seat occupancy status</th>
<th>OWS indicator light status</th>
<th>Passenger’s side front airbag status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Seat unoccupied</td>
<td>OWS indicator light lights up.</td>
<td>Passenger’s side front airbag disabled</td>
</tr>
<tr>
<td>Seat occupied by low weight occupant/object&lt;sup&gt;A&lt;/sup&gt;</td>
<td>OWS indicator light lights up</td>
<td>Passenger’s side front airbag disabled</td>
</tr>
<tr>
<td>Seat occupied by heavy occupant/object&lt;sup&gt;A&lt;/sup&gt;</td>
<td>OWS indicator light is not lit</td>
<td>Passenger’s side front airbag enabled</td>
</tr>
</tbody>
</table>

<sup>A</sup> Volvo recommends that children always be properly restrained in appropriate child restraints in the rear seats. Do not assume that the passenger’s side front airbag is disabled unless the PASSENGER AIRBAG OFF indicator lamp is lit. Make sure the child restraint is properly installed. If there is any doubt as to the status of the passenger’s side front airbag, move the child restraint to the rear seat.

The OWS is designed to enable (may inflate) the passenger’s side front airbag in the event of a collision anytime the system senses that a person of adult size is sitting properly in the front passenger’s seat. The PASSENGER AIRBAG OFF indicator lamp will be off and remain off.

If a person of adult size is sitting in the front passenger’s seat, but the PASSENGER AIRBAG OFF indicator lamp is on, it is possible that the person isn’t sitting properly in the seat. If this happens:

- Turn the vehicle off and ask the person to place the seatback in an upright position.
- Have the person sit upright in the seat, centered on the seat cushion, with the person’s legs comfortably extended.
- Restart the vehicle and have the person remain in this position for about two minutes. This will allow the system to detect that person and enable the passenger’s frontal airbag.
- If the PASSENGER AIRBAG OFF indicator lamp remains on even after this, the person should be advised to ride in the rear seat.

This condition reflects limitations of the OWS classification capability. It does not indicate OWS malfunction.

### Modifications

If you are considering modifying your vehicle in any way to accommodate a disability, for example by altering or adapting the driver’s or front passenger’s seat(s) and/or airbag systems, please contact Volvo at:
In the USA
Volvo Cars of North America, LLC
Customer Care Center

Rockleigh, New Jersey 07647
1-800-458-1552

In Canada
Volvo Cars of Canada Corp.
National Customer Service
175 Gordon Baker Road North York, Ontario M2H 2N7
1-800-663-8255

WARNING
• No objects that add to the total weight on the seat should be placed on the front passenger's seat. If a child is seated in the front passenger's seat with any additional weight, this extra weight could cause the OWS system to enable the airbag, which might cause it to deploy in the event of a collision, thereby injuring the child.
• The seat belt should never be wrapped around an object on the front passenger's seat. This could interfere with the OWS system's function.
• The front passenger's seat belt should never be used in a way that exerts more pressure on the passenger than normal. This could increase the pressure exerted on the weight sensor by a child, and could result in the airbag being enabled, which might cause it to deploy in the event of a collision, thereby injuring the child.

WARNING
• Keep the following points in mind with respect to the OWS system. Failure to follow these instructions could adversely affect the system's function and result in serious injury to the occupant of the front passenger's seat:
• The full weight of the front seat passenger should always be on the seat cushion. The passenger should never lift him/herself off the seat cushion using the armrest in the door or the center console, by pressing the feet on the floor, by sitting on the edge of the seat cushion, or by pressing against the backrest in a way that reduces pressure on the seat cushion. This could cause OWS to disable the front, passenger's side airbag.
**Occupant Weight Sensor**

**WARNING**

- Do not place any type of object on the front passenger’s seat in such a way that jamming, pressing, or squeezing occurs between the object and the front seat, other than as a direct result of the correct use of the Automatic Locking Retractor/Emergency Locking Retractor (ALR/ELR) seat belt (see page 38).

- No objects should be placed under the front passenger’s seat. This could interfere with the OWS system’s function.
General information

Location of the side impact (SIPS) airbags (front seats only)

As an enhancement to the structural side impact protection built into your vehicle, it is also equipped with Side Impact Protection System (SIPS) airbags.

The SIPS airbag system is designed to help increase occupant protection in the event of certain side impact collisions. The SIPS airbags are designed to deploy only during certain side-impact collisions, depending on the crash severity, angle, speed and point of impact.

Components in the SIPS airbag system

This SIPS airbag system consists of a gas generator, the side airbag modules built into the outboard sides of both front seat backrests, and electronic sensors/wiring.

NOTE

SIPS airbag deployment (one airbag) occurs only on the side of the vehicle affected by the impact. The airbags are not designed to deploy in all side impact situations.
01 Safety

Side impact protection (SIPS) airbags

**WARNING**

- The SIPS airbag system is a supplement to the structural Side Impact Protection System and the three-point seat belt system. It is not designed to deploy during collisions from the front or rear of the vehicle or in rollover situations.
- The use of seat covers on the front seats may impede SIPS airbag deployment.
- No objects, accessory equipment or stickers may be placed on, attached to or installed near the SIPS airbag system or in the area affected by SIPS airbag deployment.
- Never try to open or repair any components of the SIPS airbag system. This should be done only by a trained and qualified Volvo service technician.
- In order for the SIPS airbag to provide its best protection, both front seat occupants should sit in an upright position with the seat belt properly fastened.
- Failure to follow these instructions can result in injury to the occupants of the vehicle in the event of an accident.
General information

This system consists of inflatable curtains located along the sides of the roof liners, stretching from the center of both front side windows to the rear edge of the rear side door windows. It is designed to help protect the heads of the occupants of the front seats and the occupant of the outboard rear seating positions in certain side impact collisions.

In certain side impacts, both the Inflatable Curtain (IC) and the Side Impact Airbag System (SIPS airbag) will deploy. The IC and the SIPS airbag deploy simultaneously.

NOTE
If the inflatable curtain deploys, it remains inflated for approximately 3 seconds.

WARNING
- The IC system is a supplement to the Side Impact Protection System. It is not designed to deploy during collisions from the rear of the vehicle.
- Never try to open or repair any components of the IC system. This should be done only by a trained and qualified Volvo service technician.
- Never hang heavy items from the ceiling handles. This could impede deployment of the Inflatable Curtain.
- The rear seat should not be loaded to a level higher than 2 in. (5 cm) below the upper edge of the rear side windows. Objects placed higher than this level could impede the function of the Inflatable Curtain.

WARNING
In order for the IC to provide its best protection, both front seat occupants and both outboard rear seat occupants should sit in an upright position with the seat belt properly fastened; adults using the seat belt and children using the proper child restraint system. Only adults should sit in the front seats. Children must never be allowed in the front passenger seat, see page 38 for guidelines. Failure to follow these instructions can result in injury to the vehicle occupants in an accident.
**General information**

**Whiplash Protection System (WHIPS) – front seats only**

The WHIPS system consists of specially designed hinges and brackets on the front seat backrests designed to help absorb some of the energy generated in a collision from the rear (when the vehicle is rear-ended).

In the event of a collision of this type, the hinges and brackets of the front seat backrests are designed to change position slightly to allow the backrest/head restraint to help support the occupant's head before moving slightly rearward. This movement helps absorb some of the forces that could result in whiplash.

**WARNING**

- The WHIPS system is designed to supplement the other safety systems in your vehicle. For this system to function properly, the three-point seat belt must be worn. Please be aware that no system can prevent all possible injuries that may occur in an accident.
- The WHIPS system is designed to function in certain collisions from the rear, depending on the crash severity, angle and speed.

- Occupants in the front seats must never sit out of position. The occupant’s back must be as upright as comfort allows and be against the seat back with the seat belt properly fastened.
- If your vehicle has been involved in a rear-end collision, the front seat backrests must be inspected by a trained and qualified Volvo service technician, even if the seats appear to be undamaged. Certain components in the WHIPS system may need to be replaced.
- Do not attempt to service any component in the WHIPS system yourself.
WARNING

- Boxes, suitcases, etc. wedged behind the front seats could impede the function of the WHIPS system.
- If the rear seat backrests are folded down, cargo must be secured to prevent it from sliding forward against the front seat backrests in the event of a collision from the rear. This could interfere with the action of the WHIPS system.

WARNING

Any contact between the front seat backrests and the folded rear seat or a rear-facing child seat could impede the function of the WHIPS system. If the rear seat is folded down, the occupied front seats must be adjusted forward so that they do not touch the folded rear seat.
Driving after a collision
If the vehicle has been involved in a collision, the text Safety mode See manual may appear in the information display. This indicates that the vehicle’s functionality has been reduced.

NOTE
This text can only be shown if the display is undamaged and the vehicle’s electrical system is intact.

Safety mode is a feature that is triggered if one or more of the safety systems (e.g. front or side airbags, an inflatable curtain, or one or more of the seat belt pretensioners) has deployed. The collision may have damaged an important function in the vehicle, such as the fuel lines, sensors for one of the safety systems, the brake system, etc.

WARNING
- Never attempt to repair the vehicle yourself or to reset the electrical system after the vehicle has displayed Safety mode See manual. This could result in injury or improper system function.
- Restoring the vehicle to normal operating status should only be done by a trained and qualified Volvo service technician.
- After Safety mode See manual has been displayed, if you detect the odor of fuel vapor, or see any signs of fuel leakage, do not attempt to start the vehicle. Leave the vehicle immediately.

Attempting to start the vehicle
If damage to the vehicle is minor and there is no fuel leakage, you may attempt to start the vehicle. To do so:
1. Remove the remote key from the ignition slot and open the driver’s door. If a message is displayed that the ignition is on, press the start button.
2. Close the driver’s door and reinsert the remote key in the ignition slot.
3. Try to start the vehicle.

If the message Safety mode See manual is still displayed, the vehicle should not be driven and must be towed. Concealed faults may make the vehicle difficult to control.

Moving the vehicle
If the message Normal mode is displayed when Safety mode See manual is no longer displayed, the vehicle may be moved carefully from its present position, if for example, it is blocking traffic. It should, however, not be moved farther than is absolutely necessary.

WARNING
Even if the vehicle appears to be drivable after Safety mode has been set, it should not be driven or towed (pulled by another vehicle). There may be concealed damage that could make it difficult or impossible to control. The vehicle should be transported on a flatbed tow truck to a trained and qualified Volvo service technician for inspection/repairs.
Children should be seated safely

Volvo recommends the proper use of restraint systems for all occupants including children. Remember that, regardless of age and size, a child should always be properly restrained in a vehicle.

Your vehicle is also equipped with ISOFIX/LATCH attachments, which make it more convenient to install child seats.

Some restraint systems for children are designed to be secured in the vehicle by lap belts or the lap portion of a lap-shoulder belt. Such child restraint systems can help protect children in vehicles in the event of an accident only if they are used properly. However, children could be endangered in a crash if the child restraints are not properly secured in the vehicle. Failure to follow the installation instructions for your child restraint can result in your child striking the vehicle’s interior in a sudden stop.

Holding a child in your arms is NOT a suitable substitute for a child restraint system. In an accident, a child held in a person’s arms can be crushed between the vehicle’s interior and an unrestrained person. The child could also be injured by striking the interior, or by being ejected from the vehicle during a sudden maneuver or impact. The same can also happen if the infant or child rides unrestrained on the seat. Other occupants should also be properly restrained to help reduce the chance of injuring or increasing the injury of a child.

All states and provinces have legislation governing how and where children should be carried in a vehicle. Find out the regulations existing in your state or province. Recent accident statistics have shown that children are safer in rear seating positions than front seating positions when properly restrained. A child restraint system can help protect a child in a vehicle.

Here’s what to look for when selecting a child restraint system:

It should have a label certifying that it meets applicable Federal Motor Vehicle Safety Standards (FMVSS 213) – or in Canada, CMVSS 213.

Make sure the child restraint system is approved for the child’s height, weight and development – the label required by the standard or regulation, or instructions for infant restraints, typically provide this information.

In using any child restraint system, we urge you to carefully look over the instructions that are provided with the restraint. Be sure you understand them and can use the device properly and safely in this vehicle. A misused child restraint system can result in increased injuries for both the infant or child and other occupants in the vehicle.

When a child has outgrown the child safety seat, you should use the rear seat with the standard seat belt fastened. The best way to help protect the child here is to place the child on a cushion so that the seat belt is properly located on the hips (see the illustration on page 46). Legislation in your state or province may mandate the use of a child seat or cushion in combination with the seat belt, depending on the child’s age and/or size. Please check local regulations.

A specially designed and tested booster cushion and backrest can be obtained from your Volvo retailer.

**USA:** for children weighing 33 – 80 lbs. (15 – 36 kg) and 38 – 54 inches (97 – 137 cm) in height

**Canada:** for children weighing 40 – 80 lbs. (18 – 36 kg) and 40 – 54 inches (102 – 137 cm) in height
Child safety

**WARNING**

- Do not use child safety seats or child booster cushions/backrests in the front passenger's seat. We also recommend that children under 4 feet 7 inches (140 cm) in height who have outgrown these devices sit in the rear seat with the seat belt fastened.

- Keep vehicle doors and trunk locked and keep remote controls out of a child’s reach. Unsupervised children could lock themselves in an open trunk and risk injury. Children should be taught not to play in vehicles.

- On hot days, the temperature in the vehicle interior can rise very quickly. Exposure to these high temperatures for even a short period of time can cause heat-related injury or death. Small children are particularly at risk.

Child seat should always be registered. See page 39 for more information.

**Automatic Locking Retractor/ Emergency Locking Retractor (ALR/ ELR)**

To make child seat installation easier, each seat belt (except for the driver’s belt) is equipped with a locking mechanism to help keep the seat belt taut.

**When attaching the seat belt to a child seat:**

1. Attach the seat belt to the child seat according to the child seat manufacturer’s instructions.

2. Pull the seat belt out as far as possible.

3. Insert the seat belt latch plate into the buckle (lock) in the usual way.

4. Release the seat belt and pull it taut around the child seat.

A sound from the seat belt retractor will be audible at this time and is normal. The belt will now be locked in place. This function is automatically disabled when the seat belt is unlocked and the belt is fully retracted.

**WARNING**

Do not use child safety seats or child booster cushions/backrests in the front passenger’s seat. We also recommend that children who have outgrown these devices sit in the rear seat with the seat belt properly fastened.

**Volvo's recommendations**

Why does Volvo believe that no child should sit in the front seat of a car? It’s quite simple really. A front airbag is a very powerful device designed, by law, to help protect an adult. Because of the size of the airbag and its speed of inflation, a child should never be placed in the front seat, even if he or she is properly belted or strapped into a child safety seat. Volvo has been an innovator in safety for over seventy-five years, and we’ll continue to do our part. But we need your help. Please remember to put your children in the back seat, and buckle them up.

**Volvo has some very specific recommendations:**

- Always wear your seat belt.
- Airbags are a SUPPLEMENTAL safety device which, when used with a three-point seat belt can help reduce serious injuries during certain types of accidents.
Volvo recommends that you do not disconnect the airbag system in your vehicle.

- Volvo strongly recommends that everyone in the vehicle be properly restrained.
- Volvo recommends that ALL occupants (adults and children) shorter than 4 feet 7 inches (140 cm) be seated in the back seat of any vehicle with a front passenger side airbag.
- Drive safely!

Child restraint registration and recalls

Registering a child restraint
Child restraints could be recalled for safety reasons. You must register your child restraint to be reached in a recall. To stay informed about child safety seat recalls, be sure to fill out and return the registration card that comes with new child restraints.

Child restraint recall information is readily available in both the U.S. and Canada. For recall information in the U.S., call the U.S. Government’s Auto Safety Hotline at 1-800-424-9393. In Canada, visit Transport Canada’s Child Safety website at http://www.tc.gc.ca/roadsafety/childsafety/menu.htm.
Child restraint systems

Child restraints

There are three main types of child restraint systems: infant seats, convertible seats, and booster cushions. They are classified according to the child’s age and size.

The following section provides general information on securing a child restraint using a three-point seat belt. Refer to page 47–48 for information on securing a child restraint using ISOFIX/LATCH lower anchors and/or top tether anchorages.

[Image of Infant seat]

**Infant seat**

A child seat should never be used in the front passenger seat of any vehicle with a front passenger airbag – not even if the “Passenger airbag off” symbol near the rear-view mirror is illuminated (on vehicles equipped with Occupant Weight Sensor). If the severity of an accident were to cause the airbag to inflate, this could lead to serious injury or death to a child seated in this position.

[Image of Convertible seat]

**WARNING**

A child seat should never be used in the front passenger seat of any vehicle with a front passenger airbag – not even if the “Passenger airbag off” symbol near the rear-view mirror is illuminated (on vehicles equipped with Occupant Weight Sensor). If the severity of an accident were to cause the airbag to inflate, this could lead to serious injury or death to a child seated in this position.

[Image of Booster cushion]

**WARNING**

Always refer to the child restraint manufacturer’s instructions for detailed information on securing the restraint.
**WARNING**

- When not in use, keep the child restraint system secured or remove it from the passenger compartment to help prevent it from injuring passengers in the event of a sudden stop or collision.
- A small child's head represents a considerable part of its total weight and its neck is still very weak. Volvo recommends that children up to age 4 travel, properly restrained, facing rearward. In addition, Volvo recommends that children should ride rearward facing, properly restrained, as long as possible.
### Infant seats

#### Securing an infant seat with a seat belt

1. Place the infant seat in the rear seat of the vehicle.
2. Attach the seat belt to the infant seat according to the manufacturer’s instructions.

**NOTE**

Refer to page 47–48 for information on securing a child restraint using ISOFIX/LATCH lower anchors and/or top tether anchorages.

**WARNING**

- An infant seat must be in the rear-facing position only.
- The infant seat should not be positioned behind the driver’s seat unless there is adequate space for safe installation.

3. Fasten the seat belt by inserting the latch plate into the buckle (lock) until a distinct click is audible.

**WARNING**

A child seat should never be used in the front passenger seat of any vehicle with a front passenger airbag – not even if the “Passenger airbag off” symbol near the rear-view mirror is illuminated (on vehicles equipped with Occupant Weight Sensor). If the severity of an accident were to cause the airbag to inflate, this could lead to serious injury or death to a child seated in this position.
4. Pull the shoulder section of the seat belt out as far as possible to activate the belt’s automatic locking function.

**NOTE**
The locking retractor will automatically release when the seat belt is unbuckled and allowed to retract fully.

5. Press the infant seat firmly in place, let the seat belt retract and pull it taut. A sound from the seat belt retractor’s automatic locking function will be audible at this time and is normal. The seat belt should now be locked in place.

6. Push and pull the infant seat along the seat belt path to ensure that it is held securely in place by the seat belt.

**WARNING**
It should not be possible to move the child restraint (child seat) more than 1 in. (2.5 cm) in any direction along the seat belt path.

The infant seat can be removed by unbuckling the seat belt and letting it retract completely.
Convertible seats

Securing a convertible seat with a seat belt

DO NOT place the convertible seat in the front passenger’s seat

NOTE
Refer to pages 47 and 48 for information on securing a child restraint using ISOFIX/LATCH lower anchors and/or top tether anchorages.

Convertible seats can be used in either a forward or rearward-facing position, depending on the age and size of the child.

WARNING
Always use a convertible seat that is suitable for the child’s age and size. See the convertible seat manufacturer’s recommendations.

1. Place the convertible seat in the rear seat of the vehicle.

WARNING
- A small child’s head represents a considerable part of its total weight and its neck is still very weak. Volvo recommends that children up to age 4 travel, properly restrained, facing rearward. In addition, Volvo recommends that children should ride rearward facing, properly restrained, as long as possible.
- Convertible child seats should be installed in the rear seat only.
- A rear-facing convertible seat should not be positioned behind the driver’s seat unless there is adequate space for safe installation.

2. Attach the seat belt to the convertible seat according to the manufacturer’s instructions.
Fasten the seat belt

3. Fasten the seat belt by inserting the latch plate into the buckle (lock) until a distinct click is audible.

4. Pull the shoulder section of the seat belt out as far as possible to activate the belt’s automatic locking function.

NOTE

The locking retractor will automatically release when the seat belt is unbuckled and allowed to retract fully.

5. Press the convertible seat firmly in place, let the seat belt retract and pull it taut. A sound from the seat belt retractor’s automatic locking function will be audible at this time and is normal. The seat belt should now be locked in place.

Pull out the shoulder section of the seat belt

6. Push and pull the convertible seat along the seat belt path to ensure that it is held securely in place by the seat belt.

WARNING

It should not be possible to move the child restraint (child seat) more than 1 in. (2.5 cm) in any direction along the seat belt path.

The convertible seat can be removed by unbuckling the seat belt and letting it retract completely.

WARNING

A child seat should never be used in the front passenger seat of any vehicle with a front passenger airbag – not even if the “Passenger airbag off” symbol near the rear-view mirror is illuminated. If the severity of an accident were to cause the airbag to inflate, this could lead to serious injury or death to a child seated in this position.
Booster cushions

Securing a booster cushion

1. Place the booster cushion in the rear seat of the vehicle.
2. With the child properly seated on the booster cushion, attach the seat belt to or around the cushion according to the manufacturer's instructions.
3. Fasten the seat belt by inserting the latch plate into the buckle (lock) until a distinct click is audible.
4. Ensure that the seat belt is pulled taut and fits snugly around the child.

**WARNING**

- The hip section of the three-point seat belt must fit snugly across the child's hips, not across the stomach.
- The shoulder section of the three-point seat belt should be positioned across the chest and shoulder.
- The shoulder belt must never be placed behind the child's back or under the arm.
Using the ISOFIX/LATCH lower child seat anchors

Lower anchors for ISOFIX/LATCH-equipped child seats are located in the rear, outboard seats, hidden below the backrest cushions. Symbols on the seat back upholstery mark the anchor positions as shown. To access the anchors, kneel on the seat cushion and locate the anchors by feel. Always follow your child seat manufacturer’s installation instructions, and use both ISOFIX/LATCH lower anchors and top tethers whenever possible.

To access the anchors
1. Put the child restraint in position.
2. Kneel on the child restraint to press down the seat cushion and locate the anchors by feel.

3. Fasten the attachment on the child restraint’s lower straps to the ISOFIX/LATCH lower anchors.

4. Firmly tension the lower child seat straps according to the manufacturer’s instructions.

**WARNING**

Volvo’s ISOFIX/LATCH anchors conform to FMVSS/CMVSS standards. Always refer to the child restraint system’s manual for weight and size ratings.

**NOTE**

- The rear seat’s center position is not equipped with ISOFIX/LATCH lower anchors. When installing a child restraint in this position, attach the restraint’s top tether strap (if it is so equipped) to the top tether anchorage point and secure the restraint with the vehicle’s center seat belt.
- Always follow your child seat manufacturer’s installation instructions, and use both ISOFIX/LATCH lower anchors and top tethers whenever possible.

**WARNING**

- Be sure to fasten the attachment correctly to the anchor (see the illustration). If the attachment is not correctly fastened, the child restraint may not be properly secured in the event of a collision.
- The ISOFIX/LATCH lower child restraint anchors are only intended for use with child seats positioned in the outboard seating positions. These anchors are not certified for use with any child restraint that is positioned in the center seating position. When securing a child restraint in the center seating position, use only the vehicle’s center seat belt.
Your Volvo is equipped with child restraint top tether anchorages in the rear seat. They are located on the rear parcel shelf.

**Securing a child seat**

1. Place the child restraint on the rear seat.
2. Fold up the plastic cover over the anchorage to be used.
3. Route the top tether strap under the head restraint and attach it to the anchor.
4. Fold down the outboard head restraints or lower the center head restraint for easier access to the ISOFIX/LATCH anchor.
5. Attach lower tether straps to the lower ISO-FIX/LATCH anchors. If the child restraint is not equipped with lower tether straps, or the restraint is used in the center seating position, follow instructions for securing a child restraint using the Automatic Locking Retractor seat belt (see page 38).
6. Firmly tension all straps.

Refer also to the child seat manufacturer’s instructions for information on securing the child seat.

**WARNING**

- Never route a top tether strap over the top of the head restraint. The strap should be routed beneath the head restraint.
- Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used for adult seat belts or harnesses. The anchorages are not able to withstand excessive forces on them in the event of collision if full harness seat belts or adult seat belts are installed to them. An adult who uses a belt anchored in a child restraint anchorage runs a great risk of suffering severe injuries should a collision occur.
- Do not install rear speakers that require the removal of the top tether anchors or interfere with the proper use of the top tether strap.
Child safety locks

Child safety locks – rear doors
The controls are located on the rear door jambs. Use the remote control’s key blade or a screwdriver to adjust these controls.

A  The rear doors can only be opened from the outside when the slot is in the horizontal position.

B  The rear doors can be opened from the inside when the slot is in the vertical position.

LOCKS AND ALARM
Introduction
Two remote keys or optional Personal Car Communicators (PCC) are provided with your vehicle. They enable you to unlock the doors and trunk, and also function as ignition keys to start the vehicle or operate electrical components. The remote keys contain detachable metal key blades for manually locking or unlocking the driver’s door and the glove compartment. The visible ends of these key blades are unique to make it easier to identify "your" remote key. Up to six remotes can be programmed for use on the same vehicle.

The PCCs have enhanced functionality compared with the standard remote key.

NOTE
In the remainder of this chapter, all references to the remote key also pertain to the PCC unless otherwise stated.

WARNING
Never leave the remote key in the ignition slot if children are to remain in the vehicle.

See page 84 for more information on the various ignition modes.

Detachable key blade
Each remote key or PCC contains a detachable metal key blade for mechanically locking or unlocking the driver’s door and the glove compartment, and to enable the valet locking function. See page 57 for more information on the key blade and see page 60 for information on the valet locking function. The key blades have a unique code, which is used if new ones need to be produced. This code is available at an authorized Volvo retailer.

The visible ends of these key blades are unique to make it easier to identify "your" remote key.

Loss of a remote key
If either of the remote keys is lost, the other should be taken with the car to a Volvo retailer. As an anti-theft measure, the code of the lost remote key must be erased from the system.

NOTE
Additional or duplicate remote control keys can be obtained from any Authorized Volvo Retailer.

You can also obtain additional or duplicate remote control keys from certain independent repair facilities and locksmiths that are qualified to make remote control keys. Each key must be programmed to work with your vehicle.

California Only:
A list of independent repair facilities and/or locksmiths known to Volvo that can cut and code replacement keys can be found:

- by calling Volvo Customer Care at 1-800-458-1552

The number of registered keys for the vehicle can be found by pressing MY CAR and going into Information ➔ Number of keys. See page 189 for a description of the menu system.

Operation is subject to the following conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Key memory: door mirrors and driver’s seat
The position of the side door mirrors and power driver’s seat* are stored in the remote keys when the vehicle is locked. The next time the driver’s door is unlocked with the same remote key and the door is opened within 2 minutes, the power driver’s seat and side door mirrors will automatically move to the position that they were in when the doors were most recently locked with the same remote key. If the seat/mirrors have not been readjusted since the vehicle was locked, they will already be in the position stored in that particular remote key and will not move. See page 87 for more information. See also page 88 for more information on this feature.

This feature can be activated or deactivated in the vehicle’s menu by pressing MY CAR and going into Settings ➔ Car settings ➔ Car key memory. See page 189 for a description of the menu system.

See also page 61 for information regarding vehicles with the optional keyless drive.

Confirmation when locking/unlocking the vehicle
Settings can be made in the menu system for audible and visual confirmation when the vehicle has been locked or unlocked. With these functions activated, the following will occur when the vehicle is locked/unlocked:

Locking confirmation
- The turn signals flash once, an audible signal sounds and the door mirrors will fold* in.

Unlocking confirmation
- The turn signals will flash twice and the door mirrors will fold* out.

Making a setting
Different alternatives for locking/unlocking confirmation can be selected in the menus by pressing MY CAR on the center console control panel.

- To activate visual confirmation: go to Settings ➔ Car settings ➔ Light settings and select Door lock confirmation light and/or Unlock confirmation light by pressing OK/MENU.
- To activate audible confirmation: go to Settings ➔ Car settings ➔ Lock settings and select Audible confirmation by pressing OK/MENU.

See page 189 for a description of the menu system.

NOTE
If you do not receive confirmation when locking the vehicle, check whether a door or the trunk is ajar, or if this feature has been turned off in the menu.

* Option/accessory, for more information, see Introduction.
Remote key and key blade

Lock indicator

A flashing indicator light at the base of the windshield verifies that the vehicle is locked.

Immobilizer (start inhibitor)
Each of the keys supplied with your vehicle contains a coded transponder. The code in the key is transmitted to an antenna in the ignition slot where it is compared to the code stored in the start inhibitor module. The vehicle will start only with a properly coded key. If you misplace a key, take the other keys to a trained and qualified Volvo service technician for reprogramming as an anti-theft measure. The following messages (which may appear in the instrument panel display) are related to the immobilizer:

<table>
<thead>
<tr>
<th>Message</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insert car key</td>
<td>Remote key not recognized during start. Try to start the vehicle again.</td>
</tr>
<tr>
<td>Car key not found</td>
<td>PCC with keyless drive only. Remote key not recognized during start. Try to start the vehicle again. If the problem continues, insert the remote key into the ignition slot and try to start the vehicle again.</td>
</tr>
<tr>
<td>Immobilizer Try start again</td>
<td>Remote key fault during start. Contact an authorized Volvo workshop.</td>
</tr>
</tbody>
</table>

**CAUTION**

Never use force when inserting the remote key in the ignition slot. The vehicle cannot be started if the transponder is damaged.

This device complies with part 15 of the FCC rules. Operation is subject to the following condition: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

**NOTE**

The remote key’s range is normally approximately 60 ft (20 m) from the vehicle.

USA–FCC ID: LTQWFS 125VO

Replacing the battery in the remote key
The batteries should be replaced if:

- The information symbol illuminates and Low battery in remote control. Please change batteries. is shown in the display and/or
- if the locks do not react after several attempts to unlock or lock the vehicle.

See page 113 for information on starting the vehicle.
Remote key/Personal Car Communicator (PCC) - common functions*

Standard remote key
- Lock
- Unlock
- Approach lighting
- Trunk unlock/open
- Panic alarm

Buttons on the remote
- **Lock** – Press the Lock button on the remote once to lock all doors and the trunk. The turn signals will flash once to confirm locking.
- **Unlock** – Press the Unlock button on the remote once to unlock the driver’s door.

Personal Car Communicator (PCC)*
- **Lock**
- **Unlock**
- **Approach lighting**
- **Trunk unlock/open**
- **Panic alarm**

After a short pause, press the Unlock button a second time within 10 seconds to unlock the other doors and the trunk.

This function can be changed so that all doors unlock at the same time by pressing My Car and going to Settings → Car settings → Lock settings → Change doors unlock setting. See page 189 for a description of the menu system.

- **Approach lighting** – As you approach the vehicle, press the button on the remote key to light the interior lighting, parking lights, license plate lighting and the lights in the door mirrors*.

These lights will switch off automatically after 30, 60 or 90 seconds. See page 189 for a description of the menu system.

- **Unlock/open trunk**

  **Press once:** This unlocks the trunk (but does not open it) and disarms the alarm and optional movement sensor (the alarm indicator light on the dashboard will go out). If the trunk is not opened within two minutes it will automatically relock and the alarm will be rearmed.

  **Press twice:** This both unlocks the trunk and pops it open slightly.

* Option/accessory, for more information, see Introduction.
02 Locks and alarm

Remote key and key blade

**NOTE**
Any excess weight (snow, etc.) on the trunk lid may prevent it from opening.

See also page 67 for information on opening the trunk from the passenger compartment. After closing, the trunk will not automatically relock. Press Lock to relock it and rearm the alarm.

**Panic alarm** – This button can be used to attract attention during emergency situations. To activate the panic alarm, press and hold this button for at least 3 seconds or press it twice within 3 seconds. The turn signals and horn will be activated. The panic alarm will stop automatically after 2 minutes and 45 seconds. To deactivate, wait approximately 5 seconds and press the button again.

The Panic alarm button will not unlock the vehicle.

**Range**
The remote key has a range of approximately 60 ft. (20 m) from the vehicle.

**NOTE**
Buildings or other obstacles may interfere with the function of the remote key. The vehicle can also be locked or unlocked with the key blade, see page 57.

If the remote key is removed from the vehicle while the engine is running or if the ignition is in mode I or II and all of the doors are closed, a message will appear in the instrument panel display and there will be an audible signal.

When the remote key is returned to the vehicle, the message will be erased and the audible signal will stop after one of the following has been done:
- The remote key is inserted in the ignition slot
- The vehicle’s speed exceeds 20 mph (30 km/h)
- The OK button on the left steering wheel lever is pressed

Unique functions—PCC*

1. Information button
2. Indicator lights

Pressing the information button provides certain information about the vehicle with the help of the indicator lights.

**Using the information button**
1. Press the information button *.
2. All of the indicator lights will flash sequentially for approximately 7 seconds to indicate that the PCC is receiving information from the vehicle. If any of the buttons are pressed during this 7-second period, transmission of information to the PCC will be interrupted.

* Option/accessory, for more information, see Introduction.
NOTE
If none of the indicator lights flash when the information button has been pressed several times from different places in relation to the vehicle, contact an authorized Volvo service technician.

The indicator lights provide information according to the illustration:

1. Steady green light: the vehicle is correctly locked.
2. Steady yellow light: the vehicle is not locked.
3. Steady red light: the alarm has been triggered since the vehicle was most recently locked.
4. Both red lights flash alternatively: the alarm was triggered less than 5 minutes ago.

Range
The PCC’s lock and unlock functions have a range of approximately 60 ft. (20 m) from the vehicle.

NOTE
- The approach lighting, panic alarm, and the functions controlled by the information button have a range of approximately 300 ft (100 m) from the vehicle.
- Radio waves, buildings or other obstacles may interfere with the function of the PCC.

If the vehicle does not provide confirmation when a button has been pressed, try moving closer and pressing the button again.

Outside of the PCC’s range
If the PCC is more than approximately 300 ft (100 m) from the vehicle when the information button is pressed, no new information will be received. The PCC most recently used to lock or unlock the vehicle will show the vehicle’s most recently received status. The indicator lights will not flash when the information button is pressed while the PCC is out of range.

If more than one PCC is used to lock/unlock the vehicle, only the one used most recently will show the correct locking status.

NOTE
If none of the indicator lights illuminate when the information button is pressed, this may be because the most recent transmission between the vehicle and the PCC was interrupted or impeded by buildings or other objects.

Keyless drive
Vehicles equipped with the optional Personal Car Communicator have the keyless drive function, see page 61 for detailed information.

Detachable key blade
The key blade can be removed from the remote key. When removed, the key blade can be used to:
- Lock/unlock the driver’s door if the remote key is not functioning properly
- Lock/unlock the glove compartment (see page 67)
- Override the transmission’s shiftlock system (see page 120)
- Enable/disable the valet locking function (see page 60)
Remote key and key blade

- The front passenger’s door and the rear side doors can be locked manually if necessary
- The trunk can be opened manually if necessary (see page 67)

Removing the key blade

1. Slide the spring loaded catch to the side.
2. Pull the key blade straight out of the remote key.

Reinserting the key blade in the remote key
1. Hold the remote key with the slot for the key blade up.
2. Carefully slide the key blade into its groove.
3. Gently press the key blade in the groove until it clicks into place.

Unlocking the doors with the detached key blade
Insert the key blade as far as possible in the driver’s door lock. Turn the key blade clockwise approximately one-quarter turn to unlock the driver’s door only.

NOTE
After unlocking the driver’s door with the key blade, opening the door will trigger the alarm.

To disable the alarm:
Insert the remote key in the ignition slot. This also applies to vehicles equipped with the optional keyless drive.

Replacing batteries in the remote key/PCC
The battery/batteries in the remote key/PCC should be replaced if:
- The information symbol lights up and a text appears in the information display.
- the vehicle’s locks repeatedly do not react when a button on the remote key/PCC is pressed within approximately 60 ft (20 m) from the vehicle.

Battery type CR 2430, 3 V (one battery in the remote key, two batteries in the PCC)
Opening the remote key/PCC

1. Slide the spring loaded catch to the side.
2. Pull the key blade straight out of the remote key.
3. Insert a small screwdriver in the hole behind the spring loaded catch and carefully pry up the cover.

NOTE
Turn the remote key with the buttons upward so that the batteries do not fall out when the cover is removed.

Replacing the batteries

CAUTION
When handling batteries, avoid touching their contact surfaces as this could result in poor battery function in the remote key.

3. Note the position of the battery’s (+) or (−) sides.

Remote key (one battery)
1. Use a screwdriver to pry out the old battery.
2. Insert a new one with the (+) side downward.

PCC (two batteries)
1. Use a screwdriver to pry out the old battery.
2. Insert the first new battery with the (+) side upward.
3. Insert the plastic spacer over the battery. Insert the second new battery on top of the plastic spacer, with the + side downward.

Re-assembling the remote key
1. Press the remote key’s cover into place.
2. Hold the remote key with the slot for the key blade up.
3. Carefully slide the key blade into its groove.
4. Gently press the key blade in the groove until it clicks into place.

Old batteries should be properly recycled.
**Valet locking**

**Blocking access to the trunk**

By utilizing the remote key with the key blade removed, the valet locking feature enables you to block access to the trunk and glove compartment for e.g., valet parking or when the vehicle is brought to the retailer for service.

**With the valet locking function activated:**

1. The vehicle's doors can be locked or unlocked with the remote
2. The engine can be started
3. The glove compartment cannot be unlocked
4. Access to the trunk is blocked (the trunk lid cannot be unlocked or opened with the remote, and the rear seat backrests cannot be lowered)

**Activating the valet locking function**

1. Insert the key blade in the glove compartment lock.
2. Turn the key blade 180 degrees clockwise.
3. Remove the key blade from the lock. A message will appear in the instrument panel display.

**Deactivating the valet locking function**

Turn the key blade 180 degrees counterclockwise in the glove compartment lock to deactivate valet locking.

See page 67 for information on locking the glove compartment normally, without activating the valet locking function.
Keyless drive (models with Personal Car Communicator only)

Keyless locking and unlocking

This system makes it possible to unlock and lock the vehicle without having to press any buttons on the Personal Car Communicators (PCC). It is only necessary to have a keyless drive remote key in your possession to operate the central locking system.

Range of the keyless drive remote key—5 ft (1.5 meters)

Both of the PCCs provided with the vehicle have the keyless function, and additional ones can be ordered. The system can accommodate up to six PCCs.

The red rings in the illustration indicate the area around the vehicle that is within range of the keyless drive antennas.

Unlocking the vehicle

- A keyless drive remote key must be on the same side of the vehicle as the door to be opened, and be within 5 feet (1.5 meters) of the door's lock or the trunk (see the shaded areas in the illustration).
- Pull a door handle to unlock and open the door or press the trunk opening control on the trunk lid.

The number of doors that are unlocked at the same time can be set in the vehicle's menu system. Press MY CAR and go to Car settings.

NOTE

- The gear selector must in the P position before the vehicle can be locked and the alarm can be armed.
- The buttons on the keyless drive remote key can also be used to lock and unlock the vehicle, see page 55 for more information.

NOTE

- The buttons on the keyless drive remote key can also be used to lock and unlock the vehicle, see page 55 for more information.

Unlocking the vehicle with the key blade

If the PCC does not function normally (weak battery, etc.), the vehicle can be unlocked with the detachable key blade. See page 58 for instructions on detaching the key blade from the PCC. To access the keyhole in the driver's door:

Keyless drive keyhole cover
1. Press the key blade approx. 0.5 in. (1 cm) straight up in the hole on the underside of the keyhole cover.  
> The cover will come off due to the pressure exerted when the key blade is pushed upward.

2. Insert the key blade as far as possible in the driver's door lock. Turn the key blade to unlock the driver's door only. This will trigger the alarm. Press the remote key into the ignition slot to turn off the alarm.

3. Press the cover back into place after the door has been unlocked.

### Locking the vehicle

Models with keyless drive have a pressure-sensitive area on the outside door handles and a rubber-covered button next to the trunk opening control.

The doors and the trunk can be locked by pressing the pressure-sensitive area on each of the outside door handles or the rubber-covered button next to the trunk opening control. The lock indicator on the dash will begin to flash.

### Keyless drive remote key and driver's seat/door mirror memory

- When you leave the vehicle with a PCC in your possession and lock any door, the position of the driver's seat and door mirrors will be stored in the seat's memory.
- The next time a door is opened by a person with the same PCC in his/her possession, the driver's seat and door mirrors will automatically move to the position that they were in when the door was most recently locked.

### NOTE

On keyless drive vehicles, the gear selector must be in the Park (P) position, all doors and the trunk must be closed and the ignition must be switched off before the vehicle can be locked.

### NOTE

If several people carrying PCCs approach the vehicle at the same time, the driver's seat and door mirrors will assume the positions they were in for the person who opens the driver's door.

See also page 87 for information on adjusting and storing the seat's position in the seat memory.

### Keyless drive information messages

If all of the PCCs are removed from the vehicle while the engine is running or if the ignition is in mode II (see page 84) and all of the doors are closed, a message will appear in the instrument panel display and an audible signal will sound.

When at least one PCC has been returned to the car, the message will be erased in the display and the audible signal will stop when:

- A door has been opened and closed
- The PCC has been inserted in the ignition slot
- The OK button (see page 187 for the location of this button) has been pressed.
CAUTION

- Keyless drive remote keys should never be left in the vehicle. In the event of a break-in, a remote found in the vehicle could make it possible to start the engine.
- Electromagnetic fields or metal obstructions can interfere with the keyless drive system. The remote key should never be placed closer than approximately 4-6 in. (10-15 cm) to cell phones, metallic objects or e.g., stored in a metal briefcase.

NOTE
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept interference received, including interference that may cause undesired operation.

CAUTION
Changes or modifications not expressly approved by the manufacturer could void the user’s authority to operate the equipment.

Siemens VDO
5WK48891

Tested To Comply With FCC Standards
For Automobile Use
Canada – IC:267T-5WK48952, 267T-5WK48964, 267T-5WK48891

NOTE
This device complies with RSS -210 of Industry Canada. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept interference received, including interference that may cause undesired operation.

CAUTION
Changes or modifications not expressly approved by the manufacturer could void the user’s authority to operate the equipment.

Siemens VDO
5WK48891

Location of the keyless drive antennas

The keyless drive system has a number of antennas located at various points in the vehicle.

1. On the inside center of the rear bumper
2. Left rear door handle
3. Center of the parcel shelf, on the underside
4. Right rear door handle
5. Under the rear section of the center console
6. Under the front section of the center console
People with implanted pacemakers should not allow the pacemaker to come closer than 9 inches (22 cm) to any of the keyless drive system’s antennas. This is to help prevent interference between the pacemaker and the keyless drive system.
Locking and unlocking the vehicle

From outside the vehicle
The remote key locks and unlocks all of the doors and the trunk.

Before the vehicle can be locked from the outside with the remote key, the driver’s door must be closed. Any other door/trunk that is open will be locked and the alarm will be armed.

**NOTE**
Be sure the remote key is outside of the vehicle before the other doors/trunk are closed to help avoid locking the remote inside the vehicle.

If the vehicle is equipped with the optional keyless drive system, all doors/trunk must be closed before the vehicle can be locked.

The first press on the unlock button unlocks the driver’s door and a second press unlocks the other doors and the trunk (see also page 55). This setting can be changed in the menu system. See page 189 for a description.

If the locks repeatedly do not react when the unlock button is pressed, it may be necessary to replace the batteries in the remote, see page 54. In this case the vehicle can be unlocked with the detachable key blade. See page 58.

**Manual locking**
In certain situations (e.g., if there is no electrical current in the vehicle), the doors can be locked manually.

The detachable key blade (see page 58) can be used in the lock cylinder in the driver’s door to lock that door.

The other doors do not have lock cylinders and the slot on the rear edge of each door has to be used to lock it. This will lock the door from the outside but it can still be opened from inside the vehicle. To do so:

- Insert the key blade into the slot and turn it 90 degrees to lock that door (the slot in a particular door locks that door only).

**NOTE**
If the manual child safety lock (see page 49) is activated for a rear side door and that door is also locked manually, the door cannot be opened from the outside or inside. The door can only be unlocked with the remote key or the central locking button.

From inside the vehicle (central locking button)

The lock buttons on the door panel can be used to lock or unlock all doors and the trunk at the
same time. Press \( \text{lock} \) to lock and \( \text{unlock} \) to unlock.

**Unlocking**

The vehicle can be unlocked from inside the vehicle in two ways:

- By pressing the unlock button \( \text{unlock} \).
- The front doors can be unlocked and opened by pulling the door handle once. The rear doors can be unlocked by pulling the door handle once and opened by pulling the handle again.

**Locking**

- Press the lock button \( \text{lock} \): all of the doors that are closed will lock.

**Alternative locking when parking**

The central locking button on the driver’s door can also be used to lock the vehicle when you leave it. To do so:

1. Open the door.
2. Press the lock section of the button.
3. Close the door. This will lock the vehicle completely and arm the alarm.

**NOTE**

Please be aware that locking the vehicle in this way makes it possible to lock the remote key in the passenger compartment. To help avoid this, lock the vehicle from the outside by pressing the lock button on the remote key.

If the vehicle is locked using the central locking button, be sure that the remote key is in your possession before closing the door.

**Indicator light in the lock buttons**

There are two versions of the central locking system that affect the indicator light in the driver’s door central locking button.

If only the driver’s door has a central locking button:

- If the light is on, this indicates that all of the doors are locked.

If there are central locking buttons in both front doors and electric lock buttons in the rear side doors:

- If a light is on in one of the buttons, this means that only that door is locked. When the lights are on in all of the buttons, all of the doors are locked.

**Lock buttons in the rear side doors**

The indicator light in the button is on when the door is locked

The button in each of the rear side doors locks that door only.

To unlock the door:

- The door can be unlocked by pulling the door handle once and opened by pulling the handle again.

**Automatic relocking**

If the doors are unlocked, the locks will automatically reengage (re-lock) and the alarm will rearm after 2 minutes unless a door or the trunk has been opened.

**Automatic locking**

When the vehicle starts to move, the doors and trunk can be locked automatically. This feature
Locks and alarm

# Locks

can be turned on or off by pressing `MY CAR` and going to `Car settings ➔ Lock settings ➔ Automatic door locking`. See page 189 for a description of the menu system.

## Glove compartment

The glove compartment can only be locked and unlocked using the detachable key blade in the remote key. See page 57 for information on removing the key blade from the remote key.

1. Insert the key blade in the glove compartment lock.
2. Turn the key blade 90 degrees clockwise.
3. Remove the key blade from the lock.

## Opening the trunk manually

The trunk is held closed by an electronic locking mechanism. To open:

1. Press lightly on the rubberized plate under the handle to release the lock.
2. Lift the handle to open the trunk lid.

### CAUTION

- When pressing the rubberized plate, only light pressure is necessary to release the trunk’s electronic locking mechanism.
- When opening the trunk lid, pull it up using the handle. Too much pressure on the rubberized plate can damage its electrical connections.

## Locking/unlocking the trunk

### Unlocking the trunk with the remote key

- Press the trunk unlock button on the remote.

- **Press once:** This unlocks but does not open the trunk. The trunk can then be opened by pressing the rubber plate near the trunk lock. If the trunk is not opened within two minutes it will automatically relock and the alarm will be rearmed.

- **Press twice:** This both unlocks the trunk and pops it open slightly.

### NOTE

Any excess weight (snow, etc.) on the trunk lid may prevent it from opening.
The alarm indicator light on the dashboard will stop flashing to indicate that the alarm is not monitoring the entire vehicle. The accessory movement and inclination sensors will be automatically disconnected.

When the trunk is closed again (which has to be done manually), it will have to be relocked and the alarm rearmed by pressing the lock button on the remote key.

Unlocking/opening the trunk from the passenger compartment

- Press the button on the lighting panel (1) to unlock and pop open the trunk

**NOTE**
The taillights will illuminate automatically for a short period when the trunk has been opened.

**Unlocking the trunk with the key blade**

1. Pull out the cover over the trunk’s keyhole.
2. Unlock the trunk by inserting the key blade in the keyhole and turning a half turn counterclockwise as shown in the illustration.

**Locking the trunk with the remote key**

- Press the lock button on the remote, see page 55

The alarm indicator on the dashboard will begin flashing to show that the vehicle is locked and that the alarm has been armed.

**NOTE**
- If the doors are locked while the trunk is open, the trunk will remain unlocked until the vehicle is relocked by pressing the Lock button on the remote key.
- On keyless drive vehicles, the gear selector must be in the Park (P) position, all doors and the trunk must be closed and the ignition must be switched off before the vehicle can be locked.
Opening the trunk from the inside (U.S. models only)

The vehicle is equipped with a florescent handle on the inside of the trunk lid, which can be used in an emergency situation to open the trunk from the inside. Pull the handle down to release the trunk lid. After use, the handle must be pushed back into its original position before the trunk can be closed.

This handle is not intended to be used to anchor the trunk lid when long loads are being transported.

**WARNING**

- Keep vehicle doors and trunk locked and keep keys out of a child’s reach. Unsupervised children could lock themselves in an open trunk and risk injury. Children should be taught not to play in vehicles.
- On hot days, the temperature in the trunk or vehicle interior can rise very quickly. Exposure of people to these high temperatures for even a short period of time can cause heat-related injury or death. Small children are particularly at risk.
**The alarm system**

The alarm is automatically armed whenever the vehicle is locked with the remote key or optional Personal Car Communicator.

When armed, the alarm continuously monitors a number of points on the vehicle. The following conditions will trigger the alarm:

- The hood is forced open.
- The trunk is forced open.
- A door is forced open.
- The ignition slot is tampered with.
- An attempt is made to start the vehicle with a non-approved key (a key not coded to the car’s ignition).
- If there is movement in the passenger compartment (if the vehicle is equipped with the accessory movement sensor).
- The vehicle is lifted or towed (if the vehicle is equipped with the accessory inclination sensor).
- The battery is disconnected (while the alarm is armed).
- The siren is disconnected when the alarm is disarmed.

A message will appear in the information display if a fault should occur in the alarm system. Contact a trained and qualified Volvo service technician.

### NOTE

Do not attempt to repair any of the components in the alarm system yourself. This could affect the insurance policy on the vehicle.

**Arming the alarm**

- Press the Lock button on the remote key. One long flash of the turn signals will confirm that the alarm is armed.

Alarm confirmation settings can be changed in **MY CAR**, under **Car settings ➔ Lock settings ➔ Keyless entry**. See page 189 for a description of the menu system.

**USA FCC ID: MAYDA 5823(3)**

This device complies with part 15 of the FCC rules. Operation is subject to the following conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

**Canada IC: 4405A-DA 5823(3)**

Movement sensor DA5823 by Dynex Operation is subject to the following conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
Disarming the alarm
– Press the Unlock button on the remote key.
  > Two short flashes from the car’s direction indicators confirm that the alarm has been deactivated and that all doors are unlocked.

Turning off (stopping) the alarm
If the alarm is sounding, it can be stopped by pressing the Unlock button on the remote key or by inserting the remote key in the ignition slot. Two short flashes from the car’s direction indicators confirm that the alarm has been turned off.

Other alarm-related functions
Automatic re-arming
If the doors are unlocked, the locks will automatically reengage (re-lock) and the alarm will re-arm after 2 minutes unless a door or the trunk has been opened.

Audible/visual alarm signal
• An audible alarm signal is given by a battery powered siren. The alarm cycle lasts for 30 seconds.
• The visual alarm signal is given by flashing all turn signals for approximately 5 minutes or until the alarm is turned off.

Remote key not functioning
If the remote key is not functioning properly, the alarm can be turned off and the vehicle can be started as follows:
1. Open the driver’s door with the key blade (see page 58 for information on detaching the key blade).
  > This will trigger the alarm.
2. Insert the remote key into the ignition slot (also on vehicles with the optional keyless drive). This will turn off the alarm.
3. Start the engine (see page 113 for instructions).

Reduced alarm function
Turning off the accessory alarm sensors
In certain situations it may be desirable to turn off the accessory inclination and movement alarm sensors if, for example, you drive your vehicle onto a ferry where the rocking of the boat could trigger the alarm or if a pet is left in the vehicle with the doors locked.

The vehicle’s menu system is used for turning off these sensors (see page 189 for a description of the menu system).
1. Go into the menu under Car settings.
2. Select Reduced Guard (Press OK/MENU to choose).
3. Two alternatives are now available:
   • Activate once. If this alternative is selected, Reduced guard See manual will appear in the instrument panel display and the accessory inclination and movement alarm sensors will be deactivated when the vehicle is locked.
   • Ask when exiting. If this alternative is selected, a message will appear in the center console display each time the engine is turned off. Press OK/MENU to accept and the accessory inclination and movement alarm sensors will be
deactivated when the vehicle is locked. Press EXIT to cancel.

4. Press OK/MENU and lock the vehicle.

The next time the engine is started, the alarm system will be reset and Full guard will appear in the instrument panel display. The accessory inclination and movement alarm sensors will be reactivated.

In either of the alternatives, if you prefer not to deactivate the accessory inclination and movement alarm sensors, do not make a choice in the menu or press EXIT and lock the vehicle.

### Information displays

*Option/accessory, for more information, see Introduction.*
03 Your driving environment

Instruments and controls

Gauges

Gauges in the instrument panel

1 Speedometer

2 Fuel gauge. Please note that the fuel level indicator in the gauge moves from right to left as the amount of fuel in the tank decreases. The arrow indicates the side of the vehicle that the fuel filler door is on. See also the section on refueling beginning on page 257. See page 203 for more information on fuel level and consumption.

3 The tachometer shows engine speed in thousands of revolutions per minute (rpm). Do not drive continuously with the needle in the red area of the gauge. The engine management system will automatically prevent excessively high engines speeds.

This will be noticeable as a pronounced unevenness in engine speed.

Indicator and warning symbols

1 High beam and turn signal indicators

2 Indicator and warning symbols

3 Information and warning symbols

4 Indicator and warning symbols

Function check

All indicator and warning symbols light up in ignition mode II or when the engine is started. When the engine has started, all the symbols should go out except the parking brake symbol, which only goes out when the brake is disengaged.

If the engine does not start or if the function check is carried out in ignition mode II, all symbols go out after 5 seconds except the symbol for faults in the vehicle’s emissions system and the symbol for low oil pressure.

Certain symbols may not have their functions illustrated, depending on the vehicle’s equipment.

Indicator symbols

</tr>
<tr>
<td>DSTC SPORT</td>
<td><img src="image" alt="DSTC SPORT" /></td>
</tr>
</tbody>
</table>

The stability system’s Sport mode is activated.

A malfunction indicator (CHECK ENGINE) light may have many causes. Sometimes, you may not notice a change in your car’s behavior. Even so, an uncorrected condition could hurt fuel economy, emission controls, and drivability. Extended driving without correcting the cause could even damage other components in your vehicle.

This light may illuminate if the fuel filler cap is not closed tightly or if the engine was running while the vehicle was refueled.

**Fault in the Active Bending Light (ABL) system**
This symbol will illuminate if there is a fault in the ABL system. See page 96 for more information about this system.

**Malfunction Indicator Light**
As you drive, a computer called On-Board Diagnostics II (OBDII) monitors your vehicle’s engine, transmission, electrical and emission systems.

The malfunction indicator (CHECK ENGINE) light will illuminate if the computer senses a condition that potentially may need correcting. When this happens, please have your vehicle checked by a trained and qualified Volvo service technician as soon as possible.

A malfunction indicator (CHECK ENGINE) light may have many causes. Sometimes, you may not notice a change in your car’s behavior. Even so, an uncorrected condition could hurt fuel economy, emission controls, and drivability. Extended driving without correcting the cause could even damage other components in your vehicle.

This light may illuminate if the fuel filler cap is not closed tightly or if the engine was running while the vehicle was refueled.

**Rear fog light**
This symbol indicates that the rear fog light (located in the driver’s side tail light cluster) is on.

**Stability system**
This indicator symbol flashes when the DSTC (Dynamic Stability and Traction Control system) is actively working to stabilize the vehicle, see page 130 for more detailed information.

**Tire pressure monitoring system (TPMS)**
This symbol illuminates to indicate that tire pressure in one or more tires is low, see page 298 for detailed information.

**Low fuel level**
When this light comes on, the vehicle should be refueled as soon as possible. See page 257 for information about fuel and refueling.

**Information symbol**
The information symbol lights up and a text message is displayed to provide the driver with necessary information about one of the vehicle’s systems. The message can be erased and the symbol can be turned off by pressing the OK button (see page 187 for information) or this will take place automatically after a short period.
03 Your driving environment

Instruments and controls

Time (the length of time varies, depending on the function affected).

The information symbol may also illuminate together with other symbols.

**High beam indicator**

This symbol illuminates when the high beam headlights are on, or if the high beam flash function is used.

**Left turn signal indicator**

**Right turn signal indicator**

**NOTE**

- Both turn signal indicators will flash when the hazard warning flashers are used.
- If either of these indicators flash faster than normal, the direction indicators are not functioning properly.

**Sport mode**

This symbol illuminates to indicate that the stability system’s **Sport** mode has been activated to help provide maximum tractive force, for example when driving with snow chains, or driving in deep snow or loose sand.

### Warning symbols

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="icon" alt="Symbol" /></td>
<td>Low oil pressure</td>
</tr>
<tr>
<td><img src="icon" alt="Symbol" /></td>
<td>Parking brake applied</td>
</tr>
<tr>
<td><img src="icon" alt="Symbol" /></td>
<td>SRS airbags</td>
</tr>
<tr>
<td><img src="icon" alt="Symbol" /></td>
<td>Seat belt reminder</td>
</tr>
<tr>
<td><img src="icon" alt="Symbol" /></td>
<td>Generator not charging</td>
</tr>
<tr>
<td><img src="icon" alt="Symbol" /></td>
<td>Fault in the brake system</td>
</tr>
<tr>
<td><img src="icon" alt="Symbol" /></td>
<td>Warning symbol</td>
</tr>
</tbody>
</table>

**Low oil pressure**

If the light comes on while driving, stop the vehicle, stop the engine immediately, and check the engine oil level. Add oil if necessary. If the oil level is normal and the light stays on after restart, have the vehicle towed to the nearest trained and qualified Volvo service technician.

**Parked brake applied**

This symbol illuminates when the parking brake is applied. This symbol flashes while the brake is being applied and then glows steadily when the parking brake has been set.

If the symbol continues to flash after the brake has been set, this indicates that a fault has been detected. See the message in the information display.

**Canadian models are equipped with this symbol.**

See page 124 for more information about using the parking brake.

**Airbags – SRS**

If this light comes on while the vehicle is being driven, or remains on for longer than approximately 10 seconds after the vehicle has been started, the SRS system’s diagnostic functions have detected a fault in a seat belt lock or pretensioner, a front airbag, side impact airbag, and/or an inflatable curtain. Have the system(s) inspected by a trained and qualified Volvo service technician as soon as possible.

See page 22 for more information about the airbag system.

**Seat belt reminder**

This symbol comes on for approximately 6 seconds if the driver has not fastened his or her seat belt.
Generator not charging
This symbol comes on during driving if a fault has occurred in the electrical system. Contact an authorized Volvo workshop.

Engine temperature
Engine overheating can result from low oil or coolant levels, towing or hard driving at high heat and altitude, or mechanical malfunction. Engine overheating will be signaled with text and a red warning triangle in the middle of the instrument display. The exact text will depend on the degree of overheating. It may range from High engine temp Reduce speed to High engine temp Stop engine. If appropriate, other messages, such as Coolant level low, Stop safely will also be displayed. If your engine does overheat so that you must stop the engine, always allow the engine to cool before attempting to check oil and coolant levels.

Canadian models are equipped with this symbol.
If the BRAKE and ABS symbols come on at the same time, there may be a fault in the brake force distribution system.
1. Stop the vehicle in a safe place and turn off the engine.
2. Restart the engine.
• If both symbols extinguish, continue driving.
• If the symbols remain on, check the level in the brake fluid reservoir, see page 310. If the brake fluid level is normal but the symbols are still lit, the vehicle can be driven, with great care, to an authorized Volvo workshop to have the brake system checked.
• If the level in the reservoir is below MIN, the vehicle should be transported to an authorized Volvo workshop to have the brake system checked.

WARNING
• If the fluid level is below the MIN mark in the reservoir or if a warning message is displayed in the text window: DO NOT DRIVE. Have the vehicle towed to a trained and qualified Volvo service technician and have the brake system inspected.
• If the ABS and Brake system lights are on at the same time, there is a risk of reduced vehicle stability.

Warning symbol
The red warning symbol lights up to indicate a problem related to safety and/or drivability. A message will also appear in the main instruments panel’s display. The symbol remains visible until the fault has been rectified but the text message can be cleared with the OK button, see page 187. The warning symbol can also come on in conjunction with other symbols.

Action:
1. Stop in a safe place. Do not drive the vehicle further.
2. Read the information on the information display. Implement the action in accordance with the message in the display. Clear the message using OK.

Canadian models are equipped with this symbol.
If this symbol lights, the brake fluid level may be too low. Stop the vehicle in a safe place and check the level in the brake fluid reservoir, see page 310. If the level in the reservoir is below MIN, the vehicle should be transported to an authorized Volvo workshop to have the brake system checked.
03 Your driving environment

Instruments and controls

Reminder – doors not closed
If one of the doors, the hood or trunk lid is not closed properly, the information or warning symbol comes on together with an explanatory text message in the instrument panel. Stop the vehicle in a safe place as soon as possible and close the door, hood or trunk.

⚠ If the vehicle is driven at a speed lower than approximately 5 mph (7 km/h), the information symbol comes on.

⚠ If the vehicle is driven at a speed higher than approximately 5 mph (7 km/h), the warning symbol comes on.

Road Sign Information (RSI)
Road Sign Information (RSI) is a feature that helps the driver see road signs with information such as current speed. See page 133 for detailed information.

Trip odometers
- Odometer display
- Button for toggling between T1 and T2, and for resetting the odometer
The trip odometers are used to measure short distances. The distance is shown in the display. A short press the button toggles between the two trip odometers T1 and T2. A long press (more than 2 seconds) resets the currently displayed trip odometer to zero.

Clock
- Display
- Control for setting the clock
Turn the control clockwise/counterclockwise to set the time. The set time is shown in the information display.

The clock may be temporarily replaced by a symbol in conjunction with a message, see page 187.

Setting the clock in MY CAR
In addition to setting the clock manually as described above, it can also be set in the MY CAR menu system. See page 189 for additional information about these menus.
1. Go to Settings ➔ System options ➔ Time.
2. The hour box will be selected. Press OK to activate this box.
3. Turn TUNE to set the correct hour and press OK to confirm the setting and deactivate this box.
4. Turn TUNE to select the minute box (A) and press OK to activate this box (B).
5. Turn TUNE to set the correct minute and press OK to confirm the setting and deactivate this box.
6. Turn TUNE to select OK and press OK to complete the procedure.

Use the menu selection Settings ➔ System options ➔ Time format to display the time in the 24-hour format or the 12-hour format (AM/PM).
03 Your driving environment

Ignition modes

Inserting and removing the remote key

Inserting the remote key
Holding the end of the remote key with the base of the key blade, insert the remote key into the ignition slot as shown in the illustration and press it in as far as possible.

CAUTION
Foreign objects in the ignition slot can impair function or cause damage.

Removing the remote key
The remote key can be removed from the ignition slot by pulling it out.

Functions
The remote key has 3 modes: 0, I, and II that can be used without starting the engine. The following table shows examples of which functions are available in the respective modes.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>The odometer, clock and temperature gauge are illuminated. Power seats* can be adjusted and the infotainment system can be used for a limited time (to minimize battery drain see page 212).</td>
</tr>
<tr>
<td>I</td>
<td>The Moonroof*, power windows, 12-volt sockets in the passenger compartment, navigation system*, climate system blower, windshield wipers can be used.</td>
</tr>
<tr>
<td>II</td>
<td>The headlights/tailights illuminate. Warning/indicator lights illuminate for 5 seconds. Other systems are activated. However, the heated seats* and heated rear window function can only be activated when the engine is running. Mode II should only be used for very short periods to help avoid draining the battery.</td>
</tr>
</tbody>
</table>

1 Not necessary in vehicles with the optional keyless drive.

Ignition modes

Ignition mode 0
– The vehicle is unlocked.

Ignition mode I
– With the remote key fully pressed into the ignition slot\(^1\), press START/STOP ENGINE briefly.

Ignition mode II
– With the remote key fully pressed into the ignition slot\(^1\), press START/STOP ENGINE for approximately 2 seconds.

Returning to mode 0
To return to mode 0 from mode II or I, press START/STOP ENGINE briefly.

Starting and stopping the engine
See page 113 for information on starting the engine and switching it off.

---

Emergency towing
See page 269 for important information about the remote key when the vehicle is being towed.

---

\(^1\) Not necessary in vehicles with the optional keyless drive.
Seats

Front seats

1. Lumbar support: turn the control for firmer or softer lumbar support.
2. Front-rear adjustment: lift the bar and move the seat to the position of your choice.
3. Raise/lower front edge of seat cushion, pump up/down.
4. Backrest tilt: turn the control to adjust the angle of the backrest.
5. Raise/lower the seat, pump up/down.
6. Control panel for power seat*.

WARNING
- Do not adjust the seat while driving. The seat should be adjusted so that the brake pedal can be depressed fully. In addition, position the seat as far rearward as comfort and control allow.
- Check that the seat is securely locked into position after adjusting.

Folding the front seat backrest

1. Move the seat as far back and down as possible.
2. Adjust the backrest to an upright position.
3. Lift the catches on the rear of the backrest.
4. Without releasing the catches, push the backrest forward.

Move the seat as far forward as possible so that the head restraint slides under the glove compartment.

WARNING
- When transporting long objects, cover sharp edges on the load to help prevent injury to occupants. Secure the load to help prevent shifting during sudden stops.
- When the seat’s backrest is returned to the upright position, push and pull it to be sure that it is securely locked in this position.
03 Your driving environment

Seats

Power seat

1. Front edge of seat cushion up/down
2. Seat forward/rearward and up/down
3. Backrest tilt

Operation
The seats can be adjusted for a short period after unlocking the door with the remote control without the key in the ignition slot. Seat adjustment is normally made when the ignition is on and can always be made when the engine is running.

Notes
- Only one of the power seat’s controls can be used at the same time.
- The power seats have an overload protector that activates if a seat is blocked by any object. If this occurs, switch off the ignition (key in position 0) and wait for a short period before operating the seat again.

Power seat memory function

1. Button for storing a position
2. Button for storing a position
3. Button for storing a position
4. M (memory) button

Programming the seat's memory
Three different seating and door mirror positions can be stored in the driver seat’s memory. The following example explains how button (1) can be programmed. Buttons (2) and (3) are programmed in the same way.

To program (store) a seat and door mirror position in button (1):
1. Move the seat (and door mirrors) to the desired positions using the seat and mirror adjustment controls.
2. Press and hold down the M (memory) button (4).
3. With the memory button depressed, press button (1) briefly to store the current position for the seat/mirrors.

To move the seat and mirrors to the position that they were in when a button was programmed:
- Press and hold down button (1) until the seat and mirrors stop moving.

1 Optional on certain models
Seats

NOTE
As a safety precaution, the seat will stop automatically if the button is released before the seat has reached the preset position.

Remote key memory and the power driver's seat* and door mirrors2

Each remote key has a feature that enables it to store (remember) the position of the power driver’s seat and door mirrors when the vehicle is locked with that remote key.

This feature has to be activated for each of the remote keys used in the vehicle as follows:

1. Insert a remote key in the ignition slot.
2. Go into the MY CAR menu and go to Settings ➔ Car settings ➔ Car key memory
3. To activate the remote key memory feature, press ENTER (check the box).
   > The remote key is now ready to store the position of the power driver’s seat and door mirrors.

Repeat this procedure for each of the vehicle’s remote keys.

See page 189 for a description of the menu system.

Storing the positions of the power driver's seat/mirrors in the remote key

1. Move the seat and door mirrors to the desired position using the seat and mirror adjustment controls.
2. Exit the vehicle and lock the doors with the remote key (or close the driver’s door and press the lock button on the door handle with the remote key in your possession on vehicles with the optional keyless drive).
   > The positions of the power driver’s seat and door mirrors are now stored in the remote key’s memory.

NOTE
The remote key’s memory feature and the power driver's seat memory function (the settings made using the buttons on the side of the seat, see the section "Power seat memory function" on page 87) work independently of each other.

Returning the seat/mirrors to the stored positions

To move the seat and door mirrors to the position stored in the remote key:

1. Unlock the driver’s door with the same remote key (the one used to lock the doors). For models equipped with the optional keyless drive, you must have the same remote key in your possession.
2. Open the driver’s door within 2 minutes.

The driver’s seat and door mirrors will automatically move to the position in which you left them (if the vehicle has been unlocked with one of the other keys and new seat/mirror adjustments have been made).

2 This information also applies to vehicles with the optional keyless drive.

* Option/accessory, for more information, see Introduction.
03 Your driving environment

Seats

NOTE
- The seat will move to this position even if someone else has moved it to a different position and locked the vehicle with a different remote key.
- This feature will work in the same way with all of the remote keys that you use with your vehicle.

Emergency stop

WARNING
- Because the driver’s seat can be adjusted with the ignition off, children should never be left unattended in the vehicle.
- Movement of the seat can be STOPPED at any time by pressing any button on the power seat control panel.
- Do not adjust the seat while driving. The seat should be adjusted so that the brake pedal can be depressed fully. In addition, position the seat as far rearward as comfort and control allow.
- The seat rails on the floor must not be obstructed in any way when the seat is in motion.

Heated seats*
See page 199.

Rear seats

Rear center head restraint

The center head restraint should be adjusted according to the passenger’s height. The restraint should be carefully adjusted to support the occupant’s head.
- Pull the head restraint up as required.
- To lower, press the button at the base of the head restraint’s left support while pressing the head restraint down carefully.

* Option/accessory, for more information, see Introduction.
Seats

**WARNING**
The center rear seat head restraint should only be in its lowest position when this seat is NOT occupied. When the center position is occupied, the head restraint should be correctly adjusted to the passenger’s height. The upper edge of the head restraint should be at least on a level with the upper-most point of the seat occupant's ear.

Automatically folding down the rear seat's outboard head restraints

1. The ignition must be in mode II.
2. Press the button to lower the rear head restraints for improved visibility.

**NOTE**
- The head restraint must be returned to the upright position manually.
- The outboard head restraints cannot be folded down on models that are not equipped with this button.

**CAUTION**
The rear head restraints should not be kept folded down for prolonged periods. This could result in pressure marks in leather upholstery.

**WARNING**
For safety reasons, no one should be allowed to sit in the outboard rear seat positions if the head restraints are folded down. If these positions are occupied, the head restraints should be in the upright (fixed) position.

**Folding down the rear seat backrests**

1. Pull the release control handle(s).
2. Fold the backrest forward. Adjust the center seat head restraint if necessary.

**NOTE**
When the backrests are folded down, move the outboard head restraints forward slightly so that they do not catch on the seat cushion.
To help avoid damage to the upholstery, there should be no objects on the rear seat and the seat belt should not be buckled when the backrest is folded down.

Keep vehicle doors and trunk locked and keep keys out of a child’s reach. Unsupervised children could lock themselves in an open trunk and risk injury. Children should be taught not to play in vehicles.

On hot days, the temperature in the trunk or vehicle interior can rise very quickly. Exposure of people to these high temperatures for even a short period of time can cause heat-related injury or death. Small children are particularly at risk.

When one or more sections of the backrest is returned to the upright position, check that it is properly locked in place by pushing and pulling it. The red indicators should also not be visible.

Return the outboard head restraints to the upright position.

Long loads should always be securely anchored to help avoid injury in the event of a sudden stop.

Always turn the engine off and apply the parking brake when loading/unloading the vehicle.

Place the transmission in the Park (P) position to help prevent inadvertent movement of the gear selector.

On hot days, the temperature in the vehicle interior can rise very quickly. Exposure of people to these high temperatures for even a short period of time can cause heat-related injury or death. Small children are particularly at risk.
03 Your driving environment

Steering wheel

Adjusting

1. Lever for releasing/locking the steering wheel
2. Possible positions

The steering wheel can be adjusted for both height and reach:
1. Pull the lever toward you to release the steering wheel.
2. Adjust the steering wheel to the position that suits you.
3. Push back the lever to lock the steering wheel in place. If the lever is difficult to push into place, press the steering wheel lightly at the same time as you push the lever.

WARNING
Never adjust the steering wheel while driving.

With the optional speed-dependent power steering the level of steering force can be adjusted, see page 205.

Keypads

1. Cruise control, see page 135. Adaptive cruise control*, see page 137.
2. Infotainment controls, see page 214.

Horn

– Press the steering wheel hub to sound the horn.

* Option/accessory, for more information, see Introduction.
03 Your driving environment

Lighting

Lighting panel

Overview, light switches

1 Thumb wheel for adjusting display and instrument lighting
2 Rear fog light
3 Headlights/parking lights

Instrument lighting

Illumination of the display and instrument lights will vary, depending on ignition mode.

The display lighting is automatically subdued in darkness and the sensitivity is set with the thumb wheel.

The intensity of the instrument lighting is adjusted with the thumb wheel.

High/low beam headlights

Headlight switch and lever

1 High beam flash
2 Toggle between high and low beams

</tr>
<tr>
<td></td>
<td>Low beams/high beams/high beam flash</td>
</tr>
</tbody>
</table>

Volvo recommends using the AUTO position whenever weather conditions allow the use of the "Active high beam"** function (see page 95).

High beam flash
Move the lever toward the steering wheel to position 1. The high beams come on until the lever is released.

High/low beam headlights
Continuous high beams
1. Set the ignition to mode II.
2. With the light switch in position 0 or , pull the turn signal lever toward the steering wheel to position 2 to toggle between high and low beams (this also applies on models equipped with the optional Active Bending Lights).

> The symbol illuminates in the instrument panel to indicate that the high beams are on.

Low beams
When the engine is started, the low beams are activated automatically (daytime running lights) if the headlight control is in position 0 or .

Daytime running lights can be deactivated in the MY CAR menu system under Settings → Car settings → Light settings → Daytime running lights.

However, please be aware that these lights may not be deactivated in Canada.

NOTE
- The use of daytime running lights is mandatory in Canada.
- Continuous high beams cannot be activated when the headlight switch is in position . High beam flash will function in this position.
Active high beams – AHB*

AHB is a feature that uses a camera at the upper edge of the windshield to detect the headlights of oncoming vehicles or the tail-lights of a vehicle directly ahead. When this happens, the headlights will automatically switch from high beams to low beams. When the camera no longer detects the headlights/taillights of other vehicles, your headlights will switch back to high beams after several seconds.

To activate this feature, turn the light switch to the AUTO position. Activation will occur if the engine has been running for at least 20 seconds and the vehicle’s speed is at least 12 mph (20 km/h).

Activate/deactivate AHB by pulling the left steering wheel lever rearward (toward the steering wheel) as far as possible and releasing it. If AHB is deactivated while the high beams are on, the headlights will switch to low beams.

When AHB is activated, the symbol will illuminate in the instrument panel. The high beam indicator in the instrument panel will also illuminate when the high beams are on.

NOTE

- Keep the windshield in front of the camera free of ice, snow, dirt, etc.
- Do not mount or in any way attach anything on the windshield that could obstruct the camera.

If the symbol illuminates in the instrument panel and AHB unavailable is displayed, switching between high and low beams will have to be done manually. The light switch can remain in the AUTO position. The same applies if Windscreen Sensors blocked is displayed and the symbol is displayed. The symbol will go out when these messages are displayed.

AHB may be temporarily unavailable (e.g., in heavy fog or rain). When AHB becomes active again or if the sensors in the windshield are no longer obscured, the messages will disappear and the symbol will illuminate.
03 Your driving environment

Lighting

**CAUTION**
In the following situations, it may be necessary to switch between high and low beams manually:

- In heavy fog or rain
- In blowing snow or slush
- In bright moonlight
- In freezing rain
- In areas with dim street lighting
- When oncoming vehicles have dim front lighting
- If there are pedestrians on or near the road
- If there are reflective objects, such as signs, near the road
- When oncoming vehicles’ lights are obscured by e.g., fences, bushes, etc.
- When there are vehicles on connecting roads
- At the top of hills or in dips in the road
- In sharp curves

See page 161 for more information about the camera’s limitations.

**Tunnel detection (standard on models with a rain sensor)**
The optional rain sensor reacts to the change in lighting conditions when, for example, the vehicle is driven into a tunnel. If the daytime running lights have been deactivated, tunnel detection will activate the low beam headlights while the vehicle is in the tunnel. The low beams will be switched off approx. 20 seconds after the vehicle leaves the tunnel.

The rain sensor does not have to be activated for tunnel detection to function.

**Active Bending Lights (ABL)**

When this function is activated, the headlight beams adjust laterally to help light up a curve according to movements of the steering wheel (see the right-pointing beam in the illustration).

ABL is activated automatically¹ when the engine is started.

The function can be deactivated/reactivated in the **MY CAR** menu system under **My S60 ➔ Active Bending Lights** or under **Settings ➔ Car settings ➔ Light settings ➔ Active Bending Lights**.

See page 189 for a description of the menu system.

**NOTE**
This function is only active in twilight or dark conditions, and only when the vehicle is in motion.

If a fault should occur in the system, the symbol will illuminate and a message will be displayed as shown in the table.

¹ The factory default setting is on.
03 Your driving environment

Lighting

### Symbol | Display | Explanation
---|---|---
![](image1) | Headlamp failure | Service required

The system is not functioning properly and should be inspected/repaired by a trained and qualified Volvo service technician.

#### Auxiliary lights

If the vehicle is fitted with auxiliary lights, the driver can use the MY CAR menu system to choose to deactivate and turn these lights on and off along with the high beam headlights.

#### Parking lights

*Headlight control in position for parking lights*

The parking lights (the license plate lights also come on) can be turned on even when the ignition is switched off.

Turn the headlight control to the center position (the license plate lighting comes on at the same time).

In dark ambient lighting conditions, the rear parking lights also illuminate when the trunk is opened to alert anyone traveling behind your vehicle. This happens regardless of the position that the headlight control is in or which mode the ignition is in.

#### Rear fog light

The single rear fog light is located in the driver's side taillight cluster. The rear fog light will only function in combination with the high/low beam headlights.

- Press the button to switch the rear fog light on/off.

  > The rear fog light indicator symbol on the instrument panel and the light in the button come on when the rear fog light is switched on.

---

2 The auxiliary lights must be connected to the vehicle’s electrical system, which should only be done by a trained and authorized Volvo service technician. See page 189 for more information about the menu system.

* Option/accessory, for more information, see Introduction.
NOTE
The rear fog light is considerably brighter than the normal taillights and should be used only when conditions such as fog, rain, snow, smoke or dust reduce visibility for other vehicles to less than 500 ft. (150 meters).

Hazard warning flashers

The hazard warning flasher should be used to indicate that the vehicle has become a traffic hazard.

- To activate the flashers, press the button in the center dash. Press the button again to turn off the flashers.

NOTE
- Regulations regarding the use of the hazard warning flasher may vary, depending on where you live.
- The hazard warning flashers will be activated automatically if an airbag deploys.

When turning

Move the lever as far up or down as possible to start the turn signals. The turn signals will be cancelled automatically by the movement of the steering wheel, or the lever can be returned to its initial position by hand.

NOTE
- Regulations regarding the use of the hazard warning flasher may vary, depending on where you live.
- The hazard warning flashers will be activated automatically if an airbag deploys.

Turn signals

When changing lanes

The driver can automatically flash the turn signals 3 times by moving the turn signal lever up or down to the first position and releasing it.

NOTE
- This automatic flashing sequence can be interrupted by immediately moving the lever in the opposite direction.
- If the turn signal indicator flashes faster than normal, check for a burned-out turn signal bulb.
Interior lighting, front

Light switches, front roof lighting

1 Drivers side front reading light, on/off
2 Passenger’s side front reading light, on/off
3 Overhead courtesy lighting.

The lighting in the front part of the passenger compartment is controlled with the buttons (1) and (2) in the roof console.

Switch (3) has three positions for all passenger compartment lighting:

- **Off**: right side depressed, automatic lighting off.
- **Neutral position**: automatic lighting is on.
- **On** – left side depressed, passenger compartment lighting on.

"Theater lighting"

When the overhead courtesy lighting has gone out and the engine is running, several LEDs located near the roof console illuminate to provide faint lighting for the occupants of the front seats. This lighting goes out just after the overhead courtesy lighting when the vehicle is locked.

Interior lighting, rear

Rear reading lights

The lights are switched on or off by pressing each respective button.

Courtesy lights/door step lighting*

The courtesy lights/door step lighting switch on/off automatically when one of the front doors is opened/closed.

Glove compartment lighting

The glove compartment lighting switches on/off automatically when the lid is opened/closed.

Overhead courtesy lighting

The passenger compartment lighting is switched on and off automatically when button (3) is in the neutral position.

The lighting comes on and remains on for 30 seconds if:

- the vehicle is unlocked from the outside with the key or remote control
- the engine is switched off and the ignition is in mode 0.

The lighting switches off when:

- the engine is started
- the vehicle is locked from the outside.

The lighting comes on and remains on for two minutes if one of the doors is open.

The passenger compartment lighting can be switched on and off manually within 30 minutes after the vehicle has been unlocked.

If the lighting is switched on manually and the vehicle is locked, the courtesy lighting will switch off automatically after one minute.
Lighting

Trunk lighting
The trunk lighting comes on automatically when the trunk lid is opened.

Home safe lighting
When you leave your vehicle at night, you can make use of the home safe lighting function to illuminate the area in front of the vehicle.

1. Remove the key from the ignition slot to put the ignition in mode 0 (see page 85 for information about the ignition modes).
2. Pull the turn signal lever as far as possible towards the steering wheel and release it.
3. Exit the vehicle and lock the doors.

The headlights, parking lights, turn signals, lights in the door mirrors, license plate lights, and footwell lighting will illuminate and remain on for 30, 60 or 90 seconds. The time interval can be set in MY CAR under Settings ➔ Car settings ➔ Light settings ➔ Home safe light duration. See page 189 for a description of the menu system.

Approach lighting
Approach lighting is activated by pressing the approach light button on the remote key (see the illustration on page 55).

When the function has been activated, the parking lights, indicator lights, door mirror lights, license plate lighting, dome lighting and door step lighting come on.

The time interval for this lighting can be set by pressing MY CAR and going to Car settings ➔ Light settings ➔ Approach light duration. See page 189 for a description of the menu system.

3 Factory setting
Windshield wipers/washers

1. Rain sensor* on/off
2. Thumb wheel sensitivity/frequency

**CAUTION**
- Use ample washer fluid when washing the windshield. The windshield should be thoroughly wet when the wipers are in operation.
- Before using the wipers, ice and snow should be removed from the windshield/rear window. Be sure the wiper blades are not frozen in place.

**Windshield wipers off**
Move the lever to position 0 to switch off the windshield wipers.

**Single sweep**
Move the lever upward from position 0 to sweep the windshield one stroke at a time for as long as the lever is held up.

**Intermittent wiping**
With the lever in this position, you can set the wiper interval by twisting the thumb wheel upward to increase wiper speed or downward to decrease the speed.

**Continuous wiping**
The wipers operate at normal speed.

**Windshield wiper service position**
The windshield wipers must be in the service position before the wiper blades can be cleaned or replaced. See page 318 for additional information.

**Rain sensor***
The rain sensor automatically regulates wiper speed according to the amount of water on the windshield. The sensitivity of the rain sensor can be adjusted moving the thumb wheel up (the wipers will sweep the windshield more frequently) or down (the wipers will sweep the windshield less frequently).

**NOTE**
The wipers will make an extra sweep each time the thumb wheel is adjusted upward.

When the rain sensor is activated, the symbol will illuminate in the instrument panel.

**Activating and setting the sensitivity**
When activating the rain sensor, the vehicle must be running or in ignition mode II and the windshield wiper lever must be in position 0 or in the single sweep position.

Activate the rain sensor by pressing the button. The windshield wipers will make one sweep.

Press the lever up for the wipers to make an extra sweep. The rain sensor returns to active mode when the stalk is released back to position 0.

**Deactivating**
Deactivate the rain sensor by pressing the button or press the lever down to another wiper position.
03 Your driving environment

Wipers and washers

The rain sensor is automatically deactivated when the key is removed from the ignition slot or five minutes after the ignition has been switched off.

**CAUTION**
The rain sensor should be deactivated when washing the car in an automatic car wash, etc. If the rain sensor function is left on, the wipers will start inadvertently in the car wash and could be damaged.

Windshield washing

Move the lever toward the steering wheel to start the windshield and headlight washers. After the lever is released the wipers make several extra sweeps.

**Heated washer nozzles**
The washer nozzles are heated automatically in cold weather to help prevent the washer fluid from freezing.

**High-pressure headlight washing**
High-pressure headlight washing consumes a large quantity of washer fluid. To save fluid, the headlights are washed using two alternatives:

- **Low/high beam headlights on.** The headlights will be washed the first time the windshield is washed. Thereafter, the headlights will only be washed once for every five times the windshield is washed within a 10-minute period.
- **Parking lights on.** Optional Active Bending Lights will be washed once for every five times the windshield is washed. Normal halogen headlights will not be washed.

**CAUTION**
- Use ample washer fluid when washing the windshield. The windshield should be thoroughly wet when the wipers are in operation.
- When approx. 1 US quart (1 liter) of washer fluid remains in the reservoir, the headlights will no longer be washed. A text message will also be displayed to remind the driver to fill the washer fluid reservoir.
03 Your driving environment

Power windows

Driver’s door control panel

1 Switch for disengaging rear door power window buttons
2 Rear door window controls
3 Front door window controls.

WARNING

• Always remove the ignition key when the vehicle is unattended to put the ignition in mode 0 (see page 85 for information about the ignition modes).
• Never leave children unattended in the vehicle.
• Make sure that the windows are completely unobstructed before they are operated.

Operating

For the power windows to function, the ignition must be in at least mode 1. When the vehicle has been running, the power windows can be operated for several minutes after the remote key has been removed from the ignition slot, or until a door has been opened.

NOTE

• Movement of the windows will stop if they are obstructed in any way.
• To reduce buffeting wind noise if the rear windows are opened, also open the front windows slightly.

Manual up/down

– Move one of the controls up/down slightly.
  > The power windows move up/down as long as the control is held in position.

Auto up/down

– Move one of the controls up/down as far as possible and release it.
  > The window will open or close completely.

Operating the power windows

Manual up/down

Auto up/down.

All power windows can be operated using the control panel in the driver’s door. The control panels in the other doors only operate the window in the respective doors.
03 Your driving environment

**Power windows**

**Resetting**
If the battery has been disconnected, the auto open function must be reset so that it will work properly.

1. Gently raise the front section of the button to close the window and hold it for one second.
2. Release the button briefly.
3. Raise the front section of the button again for one second.

When not in use, release the hooks and hold the sun shade while it retracts.

---

**Integrated rear sun shade***

*Option/accessory, for more information, see Introduction.

*Integrated sun shade*

- Pull up the sun shade and attach its hooks to the ceiling clips.
  - The sun shade's spring-loading will pull it taut.
Power door mirrors

Retractable power door mirrors*
The mirrors can be retracted for parking/driving in narrow spaces:
1. Press down the L and R buttons at the same time.
2. Release them after approximately one second. The mirrors automatically stop in the fully retracted position.

Fold out the mirrors by pressing down the L and R buttons at the same time. The mirrors automatically stop in the fully extended position.

Storing the position*
The mirror positions are stored in the key memory when the vehicle has been locked with the remote key. When the vehicle is unlocked with the same remote control the mirrors and the driver’s seat adopt the stored positions when the driver’s door is opened.

The function can be activated/deactivated in MY CAR under Settings ➔ Car settings ➔ Side mirror settings ➔ Tilt left mirror or Tilt right mirror. See page 189 for a description of the menu system.

The door mirror will reset to its normal position:
• after 10 seconds when reverse is disengaged and the car remains stopped.
• immediately when reverse is disengaged and the vehicle’s forward speed exceeds approximately 6 mph (10 km/h).
• immediately if you press the corresponding L or R button again.
• when the engine is turned off.
• when the side mirrors are folded in.

NOTE
Only one mirror can be tilted down at a time.

Automatically tilting the door mirrors when parking
The door mirrors can tilt down automatically to help give the driver a better view along the sides of the vehicle, for example when parallel parking. When the transmission is no longer in

WARNING
Objects seen in the mirrors may appear further away than they actually are.

Adjusting
1. Press the L button for the left door mirror or the R button for the right door mirror. The light in the button comes on.
2. Adjust the position with the joystick in the center.
3. Press the L or R button again. The light should no longer be on.
Mirrors

Reverse, the mirrors will automatically return to their original position.

This function can be activated/deactivated in MY CAR under Settings ➔ Car settings ➔ Side mirror settings ➔ In reverse gear tilt left mirror or In reverse gear tilt right mirror. See page 189 for information about the MY CAR menu system.

Automatic retraction when locking
When the vehicle is locked/unlocked with the remote key the door mirrors are automatically retracted/extended.

The function can be activated/deactivated in MY CAR under Settings ➔ Car settings ➔ Side mirror settings ➔ Retract side mirrors when locking. See page 189 for a description of the menu system.

Resetting to neutral
Mirrors that have been moved out of position by an external force must be electrically reset to the neutral position for electric retracting/extending to work.

- Retract the mirrors with the L and R buttons.
- Fold them out again with the L and R buttons.

The mirrors are now reset in neutral position.

Home safe and approach lighting
The light on the door mirrors comes on when approach lighting or home safe lighting is selected, see page 100.

Rear window and door mirror defrosters

Use the defroster to quickly remove fog and ice from the rear window and the door mirrors.

Press the button once to start simultaneous rear window and door mirror defrosting. The light in the button indicates that the function is active. Switch the function off when then windows have cleared to help avoid battery drain.

The rear window is defogged/de-iced automatically if the vehicle is started in an outside temperature lower than 48 °F (9 °C). Auto-defrosting can be selected in MY CAR under Settings ➔ Climate settings ➔ Automatic rear defroster. See page 189 for a description of the menu system.

Interior rearview mirror

Auto-dim function
An integrated sensor reacts to headlights from following traffic and automatically reduces glare in the mirror.
Operation

The rearview mirror has an integrated display that shows the compass direction in which the vehicle is pointing. Eight different directions are shown with the abbreviations: N (north), NE (north east), E (east), SE (southeast), S (south), SW (southwest), W (west) and NW (northwest).

Calibration

The compass will need to be calibrated if the vehicle is driven into a new magnetic zone (see the magnetic zones on the map at the end of this section). To do so:

1. Stop the vehicle in a large open area, safely out of traffic and away from steel structures and high-tension electrical wires.
2. Start the vehicle.

3. Using a pen or similar object, press and hold the button on the underside of mirror until C is shown again in the mirror (after approx. 6 seconds).
4. Drive as usual. C disappears from the display when calibration is complete.

Alternative calibration method:

Drive slowly in a circle at a speed of no more than 5 mph (8 km/h) until C disappears from the display when calibration is complete.

Selecting a magnetic zone

The earth is divided into 15 magnetic zones. The correct zone must be selected for the compass to work correctly.

1. Put the ignition in mode II.
2. Using a pen or similar object, press and hold the button on the rear side of mirror for at least 3 seconds. The number for the current area will be shown.
3. Press the button repeatedly until the number for the required geographic area (1 – 15) is shown.
4. The display will revert to showing the compass direction after several seconds.
03 Your driving environment

Power moonroof

Introduction
The moonroof\(^1\) controls are located in the ceiling console near the rearview mirror. The moonroof can be opened vertically and horizontally. The vehicle’s ignition must be in mode I or II for the moonroof to be operated.

CAUTION
- Remove ice and snow before opening the moonroof.
- Do not operate the moonroof if it is frozen closed.
- Never place heavy objects on the moonroof.

Sliding moonroof

Opening, automatic
Opening, manual
Closing, manual
Closing, automatic

Automatic opening
- Pull the switch as far back as possible (to the position for automatic opening) and release it to automatically fully slide open the moonroof.

Manual opening
- Pull the switch back to the first stop (the position for manual opening) and hold it until the moonroof has opened to the position of your choice.

Manual closing
- Push the switch forward to the first stop (the position for manual closing) and hold it until the moonroof has closed to the position of your choice, or has closed completely.

Automatic closing
- Push the switch as far forward as possible (the position for automatic closing) and release it to automatically close the moonroof.

\(^1\) Option on certain models
WARNING

- During manual closing, if the moonroof is obstructed, immediately open it again.
- Never open or close the moonroof if it is obstructed in any way.
- Never allow a child to operate the moonroof.
- Never leave a child alone in a vehicle.
- When leaving the vehicle, ensure that the ignition is in mode 0 (see page 84 for information about the various ignition modes) to disable the moonroof. Never leave the remote key/PCC* in the vehicle.
- Never extend any object or body part though the open moonroof, even if the vehicle’s ignition is completely switched off.

Tilt position

- **Tilt position, raised at the rear edge**

  1. Open by pressing the rear edge of the control upward.
  2. Close by pulling the rear edge of the control downward and hold it until the moonroof has closed completely.

Visor

The moonroof features a sliding visor. The visor slides open automatically when the moonroof is opened, and must be closed manually.

Wind blocker

The moonroof is equipped with a wind blocker that folds up when the moonroof is open.
### Introduction

The HomeLink® Wireless Control System provides a convenient way to replace up to three hand-held radio-frequency (RF) transmitters used to activate devices such as gate operators, garage door openers, entry door locks, security systems, even home lighting. Additional HomeLink information can be found on the Internet at www.homelink.com or by phoning the hotline at 1–800–355–3515.

### WARNING

- If you use HomeLink to open a garage door or gate, be sure no one is near the gate or door while it is in motion.
- When programming a garage door opener, it is advised to park outside of the garage.
- Do not use HomeLink with any garage door opener that lacks safety stop and reverse features as required by U.S. federal safety standards (this includes any garage door opener model manufactured before April 1, 1982). A garage door that cannot detect an object - signaling the door to stop and reverse - does not meet current U.S. federal safety standards. For more information, contact HomeLink at: www.homelink.com.

Retain the original transmitter of the RF device you are programming for use in other vehicles as well as for future HomeLink programming. It is also suggested that upon the sale of the vehicle, the programmed HomeLink buttons be erased for security purposes. Refer to “Resetting HomeLink Buttons” on page 112.

### Programming HomeLink

**NOTE**

Some vehicles may require the ignition to be switched on or be in the “accessories” position for programming and/or operation of HomeLink. It is also recommended that a new battery be placed in the hand-held transmitter of the device being programmed to HomeLink for quicker training and accurate transmission of the radio-frequency signal. The HomeLink buttons must be reset first. When this has been completed, HomeLink is in learning mode so that you can perform programming.

1. Position the end of your hand-held transmitter 1–3 inches (5–14 cm) away from the HomeLink button you wish to program while keeping the indicator light in view.
2. Simultaneously press and hold both the chosen HomeLink and hand-held transmitter buttons until the HomeLink indicator light changes from a slow to a rapidly blinking light. Now you may release both the HomeLink and hand-held transmitter buttons.

---

1 HomeLink and the HomeLink house are registered trademarks of Johnson Controls, Inc.
3. Firmly press, hold for five seconds and release the programmed HomeLink button up to two separate times to activate the door. If the door does not activate, press and hold the just-trained HomeLink button and observe the indicator light.

- If the indicator light stays on constantly, programming is complete and your device should activate when the HomeLink button is pressed and released.
- If the indicator light blinks rapidly for two seconds and then turns to a constant light continue with “Programming” steps 4-6 to complete the programming of a rolling code equipped device (most commonly a garage door opener).

4. At the garage door opener receiver (motor-head unit) in the garage, locate the “learn” or “smart” button. This can usually be found where the hanging antenna wire is attached to the motor-head unit.

5. Firmly press and release the “learn” or “smart” button. (The name and color of the button may vary by manufacturer.) There are 30 seconds to initiate step 6.

6. Return to the vehicle and firmly press, hold for two seconds and release the programmed HomeLink button. Repeat the “press/hold/release” sequence a second time, and, depending on the brand of the garage door opener (or other rolling code equipped device), repeat this sequence a third time to complete the programming process.

HomeLink should now activate your rolling code equipped device.

**Gate Operator/Canadian Programming**

Canadian radio-frequency laws require transmitter signals to “time-out” (or quit) after several seconds of transmission – which may not be long enough for HomeLink to pick up the signal during programming. Similar to this Canadian law, some U.S. gate operators are designed to “time-out” in the same manner.

If you live in Canada or you are having difficulties programming a gate operator or garage door opener by using the “Programming” procedures, replace “Programming HomeLink” step 2 with the following:

- Continue to press and hold the HomeLink button while you press and release - every two seconds ("cycle") your hand-held transmitter until the HomeLink indicator light changes from a slow to a rapidly blinking light. Now you may release both the HomeLink and hand-held transmitter buttons.

Proceed with “Programming” step 3 to complete.

**Using HomeLink**

To operate, simply press and hold the programmed HomeLink button until the trained device begins to operate (this may take several seconds). Activation will now occur for the trained device (i.e., garage door opener, gate operator, security system, entry door lock, home/office lighting, etc.). For convenience, the hand-held transmitter of the device may also be used at any time. In the event that there are still programming difficulties or questions, contact HomeLink at: www.homelink.com or by phoning the hotline at 1–800–355–3515.
NOTE
If the ignition is switched off, HomeLink will function for 30 minutes after the driver’s door has been opened.

Resetting HomeLink Buttons
Use the following procedure to reset (erase programming) from the three HomeLink buttons (individual buttons cannot be reset but can be “reprogrammed” as outlined in the following section):

1. Press and hold the two outer HomeLink buttons until the indicator light begins to flash.
2. Release both buttons.
   > HomeLink is now in the training (or learning) mode and can be programmed at any time beginning with “Programming” - step 1.

Reprogramming a Single HomeLink Button
To program a device to HomeLink using a HomeLink button previously trained, follow these steps:

1. Press and hold the desired HomeLink button. **DO NOT** release the button.
2. The indicator light will begin to flash after 20 seconds. Without releasing the HomeLink button, proceed with “Programming” - step 1.

For questions or comments, contact HomeLink at: www.homelink.com or phone 1–800–355–3515.

This device complies with FCC rules part 15 and Industry Canada (IC) RSS-210. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference that may be received including interference that may cause undesired operation.

NOTE
The transmitter has been tested and complies with FCC and IC rules. Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the device.

---

2 The term “IC:” before the certification/registration number only signifies that Industry Canada technical specifications were met.
03 Your driving environment

Start

Start Ignition slot with remote key inserted (see page 84 for more information on ignition modes)

**WARNING**

- Never use more than one floor mat at a time on the driver's floor. An extra mat on the driver's floor can cause the accelerator and/or brake pedal to catch. Check that the movement of these pedals is not impeded.
- Volvo's floor mats are specially manufactured for your car. They must be firmly secured in the clips on the floor so that they cannot slide and become trapped under the pedals on the driver's side.

1. Press the remote key into the ignition slot as far as possible, with the metallic key blade pointing outward (not inserted into the slot).¹
2. Depress the brake pedal.²
3. Press and release the START/STOP ENGINE button. The autostart function will operate the starter motor until the engine starts or until its overheating function stops it.

**WARNING**

Before starting the engine:
- Fasten the seat belt.
- Check that the seat, steering wheel and mirrors are adjusted properly.
- Make sure the brake pedal can be depressed completely. Adjust the seat if necessary.

**CAUTION**

If the engine does not start after the third try, wait for approximately 3 minutes before trying to start it again to give the battery time to recover its starting capacity.

**NOTE**

Keyless drive*

To start a vehicle equipped with the keyless drive feature, one of the remote keys must be in the passenger compartment. Follow the instructions in steps 2 and 3 to start the vehicle.

The starter motor operates for a maximum of 10 seconds. If the engine has not started, repeat the procedure.

¹ On vehicles with the optional keyless drive, it is only necessary to have a remote key in the passenger's compartment.
² If the vehicle is moving, it is only necessary to press the START/STOP ENGINE button to start the vehicle.

* Option/accessory, for more information, see Introduction.
Starting the engine

**WARNING**
- Always remove the remote key from the ignition slot when leaving the vehicle and ensure that the ignition in mode 0 (see page 85 for information about the ignition modes), especially if there are children in the vehicle.
- On vehicles with the optional keyless drive, never remove the remote key from the vehicle while it is being driven or towed.
- Always place the gear selector in Park and apply the parking brake before leaving the vehicle. Never leave the vehicle unattended with the engine running.
- Always open garage doors fully before starting the engine inside a garage to ensure adequate ventilation. The exhaust gases contain carbon monoxide, which is invisible and odorless but very poisonous.

**NOTE**
- After a cold start, idle speed may be noticeably higher than normal for a short period. This is done to help bring components in the emission control system to their normal operating temperature as quickly as possible, which enables them to control emissions and help reduce the vehicle's impact on the environment.

**CAUTION**
- When starting in cold weather, the automatic transmission may shift up at slightly higher engine speeds than normal until the automatic transmission fluid reaches normal operating temperature.
- Do not race a cold engine immediately after starting. Oil flow may not reach some lubrication points fast enough to prevent engine damage.
- The engine should be idling when you move the gear selector. Never accelerate until after you feel the transmission engage. Accelerating immediately after selecting a gear will cause harsh engagement and premature transmission wear.
- Selecting P or N when idling at a standstill for prolonged periods of time will help prevent overheating of the automatic transmission fluid.

---

3 If the gear selector is in the D or R positions and the car is not moving, engine speed (rpm) will be lower and it will take longer for the engine to reach normal operating temperature.
Engine Remote Start (ERS)*

Introduction
ERS is a feature that makes it possible to remotely start the engine to cool or heat the passenger compartment before driving.

The climate control system will start using the same settings as when the engine was switched off.

When the engine is started using ERS, it will run for a maximum of 15 minutes before automatically switching off again. After 2 ERS starts, the engine must be started in the normal way before ERS can be used again.

NOTE
Always adhere to applicable State, Province and or Local laws regarding engine idling when using ERS.

WARNING
Keep the following in mind before using ERS
- The vehicle should be in view.
- The vehicle should be unoccupied.
- The vehicle must not be parked indoors or in an enclosed area. Exhaust fumes are harmful to the health.

Using ERS

Remote key buttons used for remote engine start
1. Lock
2. Approach lighting
3. Information

Starting the engine
The maximum range for ERS is approximately 100 ft (30 meters) if the view of the vehicle is unobstructed. The vehicle must also be locked.

To start the engine:
1. Press button 1 briefly.
2. Immediately press button 2 for approximately 2 seconds.

If the requirements for ERS have been met, the following will occur:
1. The turn signals will flash several times.
2. The engine will start.
3. The turn signals will illuminate for 3 seconds to indicate that the engine has started.

After the engine has started, the vehicle remains locked but the alarm is disarmed.

Models with a Personal Car Communicator (PCC) remote key* (see page 56)

The indicator light for approach lighting will flash several times and then glow continuously if all of the requirements for ERS have been met. However, this does not indicate that ERS has started the engine.

To check if ERS has started the engine, press the information button (3). If the engine has started, the indicator light for button 2 will illuminate.

Active functions
When the engine is started with ERS, the following functions are activated:
- The climate control system
- The infotainment system.

4 PCC keys only, see page 56
Deactivated functions
When the engine is started with ERS, the following functions are deactivated:
• Headlights
• Parking lights
• License plate lights
• Windshield wipers

Switching off an engine started with ERS
Any of the following will switch off the engine if it has been started with ERS:
• Pressing the lock button (1) on the remote key
• Unlocking the vehicle
• Opening a door
• Depressing the throttle or brake pedal
• Moving the gear selector from the P position
• If there are less than approx. 2.5 gallons (10 liters) of fuel in the tank
• More than 15 minutes have elapsed.

If the engine has been started with ERS and switches off, the turn signals will illuminate for 3 seconds.

Message in the instrument panel display
If ERS is interrupted, a text message will be displayed in the instrument panel.

Switching off the engine
With the engine running, press the START/STOP ENGINE button.

If the gear selector is not in the P position or if the vehicle is moving, press the START/STOP ENGINE button twice or press and hold it in until the engine switches off.

Jump starting
To jump start your vehicle:
1. Switch off the ignition (set the ignition to mode 0, see page 84).
2. First connect the red jumper cable to the auxiliary battery’s positive (+) terminal (1).
3. Fold back the cover over the positive (+) terminal on your vehicle’s battery (2), marked with a “+” sign, located under a folding cover.
4. Connect the black jumper cable to the auxiliary battery’s negative (–) terminal (3) and to the ground point in your vehicle’s engine compartment (right engine mount at the top, on the outer screw) (4).
5. Start the engine in the assisting vehicle, then start the engine in the vehicle with dead battery.
6. After the engine has started, first remove the negative (–) terminal jumper cable (black). Then remove the positive (+) terminal jumper cable (red).
**WARNING**

**PROPOSITION 65 WARNING!**
Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the state of California to cause cancer and reproductive harm. Wash hands after handling.

**CAUTION**
Connect the jumper cables carefully to avoid short circuits with other components in the engine compartment.

**WARNING**
- Do not connect the jumper cable to any part of the fuel system or to any moving parts. Avoid touching hot manifolds.
- Batteries generate hydrogen gas, which is flammable and explosive.
- Battery fluid contains sulfuric acid. Do not allow battery fluid to contact eyes, skin, fabrics or painted surfaces. If contact occurs, flush the affected area immediately with water. Obtain medical help immediately if eyes are affected.
- Never expose the battery to open flame or electric spark.
- Do not smoke near the battery.
- Failure to follow the instructions for jump starting can lead to injury.
Automatic transmission

Depress the button on the front of the gear selector knob to move the gear selector between the R, N, D, and P positions.

The gear selector can be moved freely between the Geartronic (manual shifting) and Drive (D) positions while driving.

CAUTION

The transmission’s temperature is monitored to help prevent damage to the transmission or other drivetrain components. If there is a risk of overheating, the warning symbol on the instrument panel will illuminate and a text message will be displayed. Follow the instructions provided there.

Park position (P)
Select the P position when starting or parking.

Shiftlock
When P has been selected, the transmission is mechanically blocked in this position. The brake pedal must be depressed and the ignition must be in at least mode II (see page 84) before the gear lever can be moved from the P position.

WARNING

Always apply the parking brake when the vehicle is parked, particularly when parking on a hill. The transmission’s P mode may not be able to keep the vehicle stationary if it is parked on an incline.

Press the control to apply the parking brake, see page 124.

Reverse (R)
The vehicle must be stationary when position R is selected.

Neutral position (N)
No gear is engaged and the engine can be started with the gear selector in this position. Apply the parking brake if the vehicle is stationary with the gear selector in position N.

Drive (D)
D is the normal driving position. The car automatically shifts between the various forward

1 The information display (see page 77) shows the gear selector’s position or the selected gear by displaying the following: P, R, N, D, S, 1, 2, 3, 4, 5, or 6.
Your driving environment

Transmission

03

Gears, based on the level of acceleration and speed. The car must be at a standstill when shifting from position R to position D.

Geartronic–manual shifting

Geartronic allows you to manually shift among your vehicle’s six forward speeds. Geartronic can be selected at any time.

• To access the manual shifting position from Drive (D), move the gear selector to the right (to the area marked M in the illustration).

• To return to the D position from the manual shifting position, move the gear selector to the left.

While driving

• If you select the manual shifting position while driving, the gear that was being used in the Drive position will also initially be selected in the manual shifting position.

• Move the gear selector forward (toward “+”) to shift to a higher gear or rearward (toward “−”) to shift to a lower gear.

• If you hold the gear selector toward “−”, the transmission will downshift one gear at a time and will utilize the braking power of the engine. If the current speed is too high for using a lower gear, the downshift will not occur until the speed has decreased enough to allow the lower gear to be used.

• If you slow to a very low speed, the transmission will automatically shift down.

Shiftlock – Neutral (N)

If the gear selector is in the N position and the vehicle has been stationary for at least 3 seconds (irrespective of whether the engine is running) then the gear selector is locked.

To be able to move the gear selector from N to another gear position, the brake pedal must be depressed and the ignition must be in position II, see page 84.

Geartronic–Sport mode (S)

This transmission mode provides sportier shifting characteristics and enables a more active driving style by making it possible to drive at higher rpm in each gear before shifting up. The engine also responds faster when the throttle pedal is pressed.

To access Sport mode from Drive (D), move the gear selector to the right. The transmission will not switch to manual shifting mode until the gear selector is moved forward or rearward toward + or −.

Sport mode can be selected any time.

NOTE

• On vehicles equipped with Sport mode, the transmission symbol in the main instrument panel will change from D to S when the gear selector is moved to the manual shifting mode. If the gear selector is moved toward "+" or "−", the number of the gear currently being used will be displayed, see page 77.

• Please be aware that using Sport mode may result in a slight decrease in fuel economy. Driving in D can help improve fuel economy.

Geartronic–starting on slippery surfaces

Selecting 3rd gear in Geartronic’s manual shifting mode can help provide better traction when starting off on slippery surfaces. To do so:

1. Depress the brake pedal and move the gear selector to the right from the D position to the manual shifting position. The text in the instrument panel display will change from D to 1.

2. Press the gear selector forward and release it (this selects 2nd gear). Press the selector forward again and release it to select 3rd gear.

2 Certain models only
3. Release the brake pedal and press gently on the accelerator pedal.

**Shiftlock override**

If the vehicle cannot be driven, for example because of a dead battery, the gear selector must be moved from the P position before the vehicle can be moved3.

1. Lift away the rubber mat on the floor of the storage compartment behind the center console to expose the small opening for overriding the shiftlock system.

2. Insert the key blade into the opening. Press the key blade down as far as possible and keep it held down.

Move the gear selector from the P position. For information on the key blade, see page 57.

**All Wheel Drive – AWD4**

Your Volvo can be equipped with permanent All Wheel Drive, which means that power is distributed automatically between the front and rear wheels. Under normal driving conditions, most of the engine’s power is directed to the front wheels. However, if there is any tendency for the front wheels to spin, an electronically controlled coupling distributes power to the wheels that have the best traction.

### NOTE

The message AWD disabled Service required will be appear in the information display if an electrical fault should occur in the AWD system. A warning light will also illuminate in the instrument panel. If this occurs, have the system checked by a trained and qualified Volvo service technician.

3 If the battery is dead, the electric parking brake cannot be applied or released. Connect an auxiliary battery if the battery voltage is too low, see page 116.
4 Standard on certain models.
Brake system

The brake system is a hydraulic system consisting of two separate brake circuits. If a problem should occur in one of these circuits, it is still possible to stop the vehicle with the other brake circuit.

If the brake pedal must be depressed farther than normal and requires greater foot pressure, the stopping distance will be longer.

A warning light in the instrument panel will light up to warn the driver that a fault has occurred.

If this light comes on while driving or braking, stop immediately and check the brake fluid level in the reservoir.

**NOTE**

Press the brake pedal hard and maintain pressure on the pedal – do not pump the brakes.

**WARNING**

If the fluid level is below the MIN mark in the reservoir or if a brake system message is shown in the information display: **DO NOT DRIVE**. Have the vehicle towed to a trained and qualified Volvo service technician and have the brake system inspected.

Brake pad inspection

On vehicles equipped with a jack*, the condition of the brake pads can be checked by raising the vehicle (see page 294 for information about using the jack and removing a wheel) and performing a visual inspection of the brake pads.

**WARNING**

- If the vehicle has been driven immediately prior to a brake pad inspection, the wheel hub, brake components, etc., will be very hot. Allow time for these components to cool before carrying out the inspection.
- Apply the parking brake and put the gear selector in the Park (P) position.
- Block the wheels standing on the ground, use rigid wooden blocks or large stones.

**WARNING**

- Use the jack intended for the vehicle when changing a tire. For any other job, use stands to support the vehicle.
- The jack should be kept well-greased and clean, and should not be damaged.
- Be sure the jack is on a firm, level, non-slippery surface.
- No objects should be placed between the base of jack and the ground, or between the jack and the attachment bar on the vehicle.
- The jack must correctly engage the jack attachment.
- Never allow any part of your body to be extended under a vehicle supported by a jack.

Brake lights

The brake lights come on automatically when the brakes are applied.

Adaptive brake lights

The adaptive brake lights activate in the event of sudden braking or if the ABS system is activated. This function causes an additional tail-light on each side of the vehicle to illuminate to help alert vehicles traveling behind.

The adaptive brake lights activate if:
Brakes

- The ABS system activates for more than approximately a half second
- In the event of sudden braking while the vehicle is moving at speeds above approximately 6 mph (10 km/h)

When the vehicle has come to a stop, the brake lights and additional taillights remain on for as long as the brake pedal is depressed or until braking force on the vehicle is reduced.

Power brakes function only when the engine is running
The power brakes utilize vacuum pressure which is only created when the engine is running. Never let the vehicle roll to a stop with the engine switched off.

If the power brakes are not working, considerably higher pressure will be required on the brake pedal to compensate for the lack of power assistance. This can happen for example when towing your vehicle or if the engine is switched off when the vehicle is rolling. The brake pedal feels harder than usual.

Water on brake discs and brake pads affects braking
Driving in rain and slush or passing through an automatic car wash can cause water to collect on the brake discs and pads. This will cause a delay in braking effect when the pedal is depressed. To avoid such a delay when the brakes are needed, depress the pedal occasionally when driving through rain, slush, etc. This will remove the water from the brakes. Check that brake application feels normal. This should also be done after washing or starting in very damp or cold weather.

Severe strain on the brake system
The brakes will be subject to severe strain when driving in mountains or hilly areas, or when towing a trailer. Vehicle speed is usually slower, which means that the cooling of the brakes is less efficient than when driving on level roads. To reduce the strain on the brakes, shift into a lower gear and let the engine help with the braking. Do not forget that if you are towing a trailer, the brakes will be subjected to a greater than normal load.

Anti-lock braking system (ABS)
The Anti-lock Braking System (ABS) helps to improve vehicle control (stopping and steering) during severe braking conditions by limiting brake lockup. When the system "senses" impending lockup, braking pressure is automatically modulated in order to help prevent lockup that could lead to a skid.

The system performs a brief self-diagnostic test when the engine has been started and driver releases the brake pedal. Another automatic test may be performed when the vehicle first reaches a speed of approximately 6 mph (10 km/h). The brake pedal will pulsate several times and a sound may be audible from the ABS control module, which is normal.

Cleaning the brake discs
Coatings of dirt and water on the brake discs may result in delayed brake function. This delay is minimized by cleaning the brake linings.

Cleaning the brake pads is advisable in wet weather, prior to long-term parking, and after the vehicle has been washed. Do this by braking gently for a short period while the vehicle is moving.

Emergency Brake Assistance
EBA is designed to provide full brake effect immediately in the event of sudden, hard braking. The system is activated by the speed with which the brake pedal is depressed.

When the EBA system is activated, the brake pedal will go down and pressure in the brake system immediately increases to the maximum level. Maintain full pressure on the brake pedal in order to utilize the system completely. EBA is automatically deactivated when the brake pedal is released.
NOTE

• When the EBA system is activated, the brake pedal will go down and pressure in the brake system immediately increases to the maximum level. You must maintain full pressure on the brake pedal in order to utilize the system completely. There will be no braking effect if the pedal is released. EBA is automatically deactivated when the brake pedal is released.

• When the vehicle has been parked for some time, the brake pedal may sink more than usual when the engine is started. This is normal and the pedal will return to its usual position when it is released.

Symbols in the instrument panel

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>BRAKES</td>
<td>Steady glow – Check the brake fluid level. If the level is low, fill with brake fluid and check for the cause of the brake fluid loss.</td>
</tr>
<tr>
<td>ABS</td>
<td>Steady glow for two seconds when the engine is started – There was a fault in the brake system’s ABS function when the engine was last running.</td>
</tr>
</tbody>
</table>

WARNING

If ABS and BRAKES come on at the same time and the brake level is below the MIN mark in the reservoir or if a brake system-related message is shown in the information display: DO NOT DRIVE. Have the vehicle towed to a trained and qualified Volvo service technician and have the brake system inspected.
Electric parking brake
An electric parking brake has the same function as a manual parking brake.

NOTE
- A faint sound from the parking brake’s electric motor can be heard when the parking brake is being applied. This sound can also be heard during the automatic function check of the parking brake.
- The brake pedal will move slightly when the electric parking brake is applied or released.

Low battery voltage
If the battery voltage is too low, the parking brake cannot be applied or released. Connect an auxiliary battery if the battery voltage is too low, see page 116.

Applying the electric parking brake

1. Press firmly on the brake pedal.
2. Push the control.
   > The symbol in the instrument panel flashes while the parking brake is being applied, and glows steadily when the parking brake has been fully applied.
3. Release the brake pedal and ensure that the vehicle is at a standstill.
4. When the vehicle is parked, the gear selector must be in position P.

NOTE
- In an emergency the parking brake can be applied when the vehicle is moving by holding in the control. Braking will be interrupted when the accelerator pedal is depressed or the control is released.
- An audible signal will sound during this procedure if the vehicle is moving at speeds above 6 mph (10 km/h).

Parking on a hill
- If the vehicle is pointing uphill, turn the front wheels so that they point away from the curb.
- If the vehicle is pointing downhill, turn the front wheels so that they point toward the curb.

The parking brake should also be applied.
Releasing the electric parking brake

Manual release
1. Fasten the seat belt.
2. Insert the remote key in the ignition slot and press the START/STOP ENGINE button (or press the START/STOP ENGINE button with a valid remote key in the passenger compartment on vehicles with the optional keyless drive).
3. Press firmly on the brake pedal.
4. Pull the parking brake control.

Automatic release
1. Start the engine.

NOTE
- For safety reasons, the parking brake is only released automatically if the engine is running and the driver is wearing a seat belt.
- The electric parking brake will be released immediately when the accelerator pedal is pressed and the gear selector is in position D or R.

2. Fasten the seat belt.
3. Move the gear selector to position D or R and press the accelerator pedal. The parking brake will release when the vehicle begins to move.

Heavy load uphill
A heavy load, such as a trailer, can cause the vehicle to roll backward when the parking brake is released automatically on a steep incline. To help avoid this:
1. Keep the electric parking brake lever pushed in with the left hand while shifting into Drive with the right.
2. While pressing the throttle pedal to pull away, release the parking brake lever only after the vehicle begins to move.

* Option/accessory, for more information, see Introduction.
Introduction
The Dynamic Stability and Traction Control system (DSTC) consists of a number of functions designed to help reduce wheel spin, counteract skidding, and to generally help improve directional stability.

CAUTION
A pulsating sound will be audible when the system is actively operating and is normal.

Traction control (TC)
This function is designed to help reduce wheel spin by transferring power from a drive wheel that begins to lose traction to the wheel on the opposite side of the vehicle (on the same axle).
TC is most active at low speeds.
This is one of DSTC’s permanent functions and cannot be switched off.

Active Yaw Control (AYC)
This function helps maintain directional stability, for example when cornering, by braking one or more of the wheels if the vehicle shows a tendency to skid or slide laterally.
This is one of DSTC’s permanent functions and cannot be switched off.

Spin control (SC)
The spin control function is designed to help prevent the drive wheels from spinning while the vehicle is accelerating.

Corner Traction Control – CTC
CTC compensates for understeering and helps provide additional stability when accelerating through a curve by preventing the inside wheel from spinning. This is particularly useful when accelerating on a curving highway on-ramp.
CTC is most effective if the stability system’s Sport mode is selected. See the section about Sport mode.

Engine Drag Control (EDC)
EDC helps keep the engine running if the wheels show a tendency to lock, e.g., when shifting down in the Geartronic manual shifting mode or while using the engine’s braking function on a slippery surface. If the engine were to stop, power steering would not function, making the vehicle more difficult to steer.

Trailer Stability Assist – TSA*
Trailer Stability Assist helps stabilize a vehicle that is towing a trailer when the vehicle and trailer have begun to sway. See page 266 for more information.
This system is automatically deactivated if the driver selects Sport mode.

Operation

Sport mode
The stability system is always activated and cannot be switched off.

However, the driver can select Sport mode, which offers more active driving characteristics. In this mode, the engine management system monitors movement of the accelerator pedal and steering wheel for sportier driving by allowing more lateral movement of the rear wheels before DSTC is activated.

Under certain circumstances, such as when driving with snow chains, or driving in deep snow or loose sand, it may be advisable to temporarily use Sport mode for maximum tractive force.

If the driver releases pressure on the accelerator pedal, DSTC will also activate to help stabilize the vehicle.

To switch to Sport mode:
1. Press the My Car button in the center console control panel and select My S60 DSTC in the menu.
2. Unselect the symbol and leave the menu by pressing EXIT.
   > This puts DSTC in Sport mode.

Sport mode remains active until the driver switches it off in the menu or until the engine is
switched off. DSTC will return to normal mode when the engine is restarted.

04 Driver support

Stability system

⚠️ WARNING
The stability system is intended to help improve driving safety. It supplements, but can never replace, the driver’s judgment and responsibility when operating the vehicle. Speed and driving style should always be adapted to traffic and road conditions.
**Introduction**

**Examples of readable road signs**

Road Sign Information (RSI) is a feature that helps the driver see road signs with the posted speed limit.

If the vehicle passes a sign showing the speed limit, this will be displayed in the center console.

**WARNING**

RSI does not function in all situations and is only intended to provide supplementary information.

The driver is always responsible for operating the vehicle safely.

**Operation**

**Registered speed information**

When RSI registers a road sign showing the speed limit, this sign is displayed as a symbol on the instrument panel.

**Settings in MY CAR**

Displaying the speed limit indication can be deactivated. To do so:

- Deselect the alternative in **MY CAR Settings ➔ Car settings ➔ Road Sign Information** or cancel by pressing **EXIT**.

**Speed alert**

The driver can opt to be alerted if the vehicle exceeds the posted speed limit by more than 3 mph (5 km/h). The alert is given when the symbol with the posted speed limit in the instrument panel begins to flash.

To activate speed alert:

- Check the Speed alert box in **MY CAR Settings ➔ Car settings ➔ Speed alert** or cancel by pressing **EXIT**.

**Limitations**

RSI’s camera has the same limitations as the human eye. See page 161 for more information about the camera’s limitations.

Signs that indirectly indicate the speed limit (such as a sign with a town's name and the permitted speed limit) will not be registered by RSI.

Other factors that may interfere with RSI include:

- Faded signs
- Signs located in a curve
04 Driver support

Road sign information (RSI)

- Twisted or damaged signs
- Obstructed signs
- Signs that are partially covered by snow, ice, etc.
Operation

Steering wheel-mounted controls and display
1 Standby mode
2 Resume set speed
3 Deactivating
4 Activate/set speed
5 Set speed indicator (parentheses indicate standby mode)

Engaging the cruise control function
Before a speed can be set, the cruise control system must be engaged (put in standby mode).

- Press the symbol (1).

> The symbol illuminates and the text (---) mph (5) indicates that cruise control is in standby mode.

NOTE
- Putting cruise control in standby mode does not set a cruising speed.
- When cruise control is in standby mode, the driver’s seat belt must be fastened before a cruising speed can be set.

Setting a speed
Use the or buttons set the vehicle’s current speed. The set speed is shown in the display.

NOTE
- Cruise control cannot be engaged at speeds below 20 mph (30 km/h).

Adjusting the set speed
After a speed has been set, it can be increased or decreased by using the or buttons.

1. Press and hold down or until the vehicle reaches the desired speed.
   > This will become the set speed when the button is released.

2. Press or for approximately a half second and release the button to increase or decrease vehicle speed by approximately 1 mph (1.6 km/h).

NOTE
- A temporary increase in speed by pressing the accelerator pedal, for less than 1 minute (e.g. when passing another car), does not affect the current cruise control setting. The vehicle will automatically return to the previously set speed when the accelerator pedal is released.
- If one of the cruise control buttons is kept depressed for more than approx. 1 minute cruise control is disengaged. The engine must then be switched off in order to reset cruise control.

Automatic deactivation
Cruise control is automatically deactivated temporarily if one of the following occurs:
- If the speed drops below approximately 20 mph (30 km/h).
- When the brake pedal is depressed.
- If the gear selector is moved to position N.
Cruise control

- During wheel spin or wheel lock-up.
- If the vehicle's speed is increased by using the accelerator pedal for more than 1 minute.

The currently set speed will be saved in the system's memory.

**Temporary deactivation**
The driver can temporarily deactivate cruise control by pressing 0. The saved speed is shown in brackets in the information display.

**Resume set speed**
If cruise control has been deactivated temporarily, it can be reactivated by pressing 🔄. The vehicle's speed returns to the most recently set speed.

⚠️ **WARNING**
There may be a significant increase in speed after the 🔄 button has been pressed.

**Deactivation**
Cruise control is disengaged by pressing 🔄 or by switching off the engine. The set speed is cleared.

**WARNING**
Cruise control should not be used in heavy traffic or when driving on wet or slippery roads. Cruise control may not maintain set speed on steep downgrades.
Introduction

Adaptive Cruise Control (ACC) is an optional system designed to assist the driver by maintaining a set speed or a set time interval to the vehicle ahead. It is primarily intended for use on long straight roads in steady traffic, such as on highways and other main roads.

When the driver has set the desired speed and the time interval to the vehicle ahead, ACC functions as follows:

- If there are no other vehicles in the lane ahead of you, your vehicle will travel at the set speed.
- If ACC’s radar sensor detects a slower moving vehicle in the lane ahead, the system will adapt your vehicle’s speed to help maintain the set time interval to the vehicle ahead. When there are no longer slower moving vehicles ahead, your vehicle will accelerate to resume the set speed.

If ACC is switched off completely or in standby mode and your vehicle comes too close to another vehicle ahead, the driver will be warned by the Distance Alert system (see page 148).

WARNING

- Adaptive Cruise Control cannot cover all driving situations and traffic, weather and road conditions. The "Function" section provides information about limitations that the driver must be aware of before using this feature.
- This system is designed to be a supplementary driving aid. It is not, however, intended to replace the driver’s attention and judgement. The driver is responsible for maintaining a safe distance and speed and must intervene if Adaptive Cruise Control does not maintain a suitable speed or suitable distance to the vehicle ahead.
- Maintenance of ACC components may only be performed by a trained and qualified Volvo technician.

Function

Function overview

1 Warning light, braking by driver required
2 Controls in steering wheel
3 Radar sensor in front grille

Adaptive Cruise Control consists of:

- A cruise control system to maintain a set speed
- A system to maintain a set distance to the vehicle ahead, which is expressed as a time interval. For example, you can choose to remain approximately 2 seconds behind the vehicle ahead. The actual distance required to maintain a 2-second interval will vary according to the speed of the vehicles.

---

1 The illustration is schematic; details will vary, depending on the model
Adaptive Cruise Control (ACC)*

**WARNING**
- Adaptive Cruise Control is not a collision avoidance system. The driver is always responsible for applying the brakes if the system does not detect another vehicle.
- Adaptive Cruise Control does not react to people or animals, or small vehicles such as bicycles and motorcycles. It also does not react to slow moving, parked or approaching vehicles, or stationary objects.
- Do not use Adaptive Cruise Control in demanding driving conditions such as city driving or other heavy traffic situations, in slippery conditions, when there is a great deal of water or slush on the road, during heavy rain or snow, in poor visibility, on winding roads or on highway on- or off-ramps.

The distance to the vehicle ahead (in the same lane) is monitored by a radar sensor. Your vehicle’s speed is regulated by accelerating and braking. The brakes may emit a sound when they are being modulated by the adaptive cruise control system. This is normal.

**WARNING**
- The brake pedal moves when the adaptive cruise control system modulates the brakes. Do not rest your foot under the brake pedal.

The ACC system is designed to smoothly regulate speed. However, the driver must apply the brakes in situations that require immediate braking. This applies when there are great differences in speed between vehicles, or if the vehicle ahead brakes suddenly.

**WARNING**
- Due to limitations in the radar sensor, braking may occur unexpectedly or not at all, see page 143.

Adaptive Cruise Control can be put in active mode at any permitted speed. However, if the vehicle’s speed falls below 18 mph (30 km/h) or if engine speed (rpm) becomes too low, ACC disengages (goes into standby mode) and will no longer modulate the brakes². The driver will then have to maintain a safe distance to the vehicle ahead.

**WARNING**
- When Adaptive Cruise Control is in standby mode or is switched off completely, the brakes will not be modulated automatically. The driver must assume full control over the vehicle.

**Warning light—driver braking required**
Adaptive Cruise Control can exert brake force that is equivalent to approximately 40% of the vehicle’s total braking capacity. In situations requiring more brake force than ACC can provide and if the driver does not apply the brakes, an audible signal from the Collision Warning system will sound and warning light will illuminate (see page 158) in the windshield to alert the driver to react.

**NOTE**
- Strong sunlight, reflections, extreme light contrasts, the use of sunglasses, or if the driver is not looking straight ahead may make the visual warning signal in the windshield difficult to see.

² Does not apply to vehicles with the optional Queue Assist. See page 141 for more information.
WARNING
Adaptive Cruise Control only warns of vehicles detected by the radar sensor, see page 143. In some cases there may be no warning or the warning may be delayed. The driver should always apply the brakes when necessary.

Steep inclines and/or heavy loads
ACC is primarily intended for use on fairly level roads. The system may have difficulty maintaining the correct distance to a vehicle ahead on steep inclines, if the vehicle is carrying a heavy load or is towing a trailer. In these situations, the driver should always be prepared to apply the brakes if necessary.

Operation

Putting ACC in standby mode
Before ACC can be used to regulate speed and/or the distance to a vehicle ahead, it must first be put in standby mode.

To do so:
Press \( \text{ACC} \).

The \( \text{ACC} \) symbol appears in the display and parentheses (---) indicate that ACC is in standby mode.

NOTE
The driver's door must be closed and the driver's seat belt must be fastened before ACC can be put in active mode. If the driver's seat belt is taken off or if the driver's door is opened, ACC will return to standby mode.

Setting a speed
Once ACC has been put in standby mode, use the \( + \) or \( - \) buttons to store (set) the vehicle's current speed. This puts the system in active mode. The set speed, for example 55 mph, is shown in the display.

Controls and display
1. Resume previous settings, increase speed (each additional press increases speed by 1 mph (approximately 2 km/h).
2. Standby mode on/off
3. Set time interval
4. Put in active mode and set a speed
5. Set speed (parentheses indicate standby mode)
6. Time interval while it is being set
7. Time interval after it has been set

* Option/accessory, for more information, see Introduction.
Adaptive Cruise Control (ACC)*

When the symbol on the left side of the display changes to , the radar sensor has detected another vehicle ahead. The distance to a vehicle ahead is only regulated when this symbol  is illuminated.

Changing the set speed
After a speed has been set, it can be increased or decreased by using the or buttons. Each time one of these buttons is pressed, the vehicle's speed changes by 5 mph (approximately 8 km/h).

When the system is in active mode, the button has the same function as , but results in a smaller increase in speed.

Setting a time interval
The set time interval to vehicles ahead can be increased by pressing and decreased by pressing . The current time interval is shown briefly in the display following adjustment.

Different time intervals can be selected and are shown in the display as 1–5 horizontal bars. The greater the number of bars, the longer the time interval. One bar represents a time interval of approximately 1 second; 5 bars is approximately 3 seconds. At low speeds, when the distance to the vehicle ahead is short, ACC increases the time interval slightly. In order to follow the vehicle ahead as smoothly as possible, ACC allows the time interval to vary considerably in certain situations.

NOTE
- If one of the Adaptive Cruise Control buttons is pressed for more than approximately one minute, ACC will be deactivated. The engine must then be switched off and restarted to reset ACC.
- In some situations Adaptive Cruise Control cannot be put in active mode. Cruise control Unavailable is shown in the display, see page 146.

WARNING
- Only use a time interval that is suitable in current traffic conditions.
- A short time interval gives the driver limited reaction time if an unexpected situation occurs in traffic.

Standby mode (temporary deactivation)
Press to temporarily deactivate cruise control (put it in standby mode). The set speed, for example 55 mph, is then shown in parentheses.

The previously set speed and time interval are resumed by pressing .

WARNING
- There may be a significant increase in speed after the button has been pressed.

When ACC is in active mode, the vehicle's speed increases by approximately 1 mph (1 km/h) each additional time is pressed.
Standby mode due to action by the driver
ACC is temporarily deactivated and put in standby mode:
• if the brakes are applied
• if the gear selector is moved to N
• if the driver drives at a speed higher than the set speed for more than 1 minute.
In this happens, the driver will have to regulate the vehicle’s speed.

NOTE
If the accelerator pedal is only depressed for a short time, such as when passing another vehicle, ACC is deactivated temporarily and is reactivated when the pedal is released.

Automatic standby mode
Adaptive cruise control is linked to other systems such as the stability and traction control system (DSTC). If this system is not functioning properly, adaptive cruise control is automatically deactivated and will go into standby mode.
In the event of automatic deactivation, an audible signal will sound and the message Cruise control Cancelled is shown in the display. The driver must then intervene and adapt the vehicle’s speed to the surrounding traffic and regulate the distance to the vehicle ahead.

An automatic switch to standby mode may be caused if:
• engine speed (rpm) is too high/low
• the vehicle’s speed goes below 18 mph (30 km/h)\(^3\)
• the wheels lose traction
• brake temperature is high
• the radar sensor is obstructed by, for example, wet snow or rain.

Resuming the set speed
If ACC is in standby mode, it can be reactivated by pressing the \(\bigcirc\) button on the steering wheel keypad. The vehicle will return to the most recently set speed.

WARNING
The vehicle may accelerate quickly after \(\bigcirc\) has been pressed if its current speed is considerably lower than the set speed.

Passing another vehicle
If your vehicle’s speed is being regulated by ACC and the driver indicates that he/she would like to pass the vehicle ahead by using the left turn signal, ACC can assist by accelerating briefly.
This function is active at speeds above approximately 45 mph (70 km/h).

WARNING
Please be aware that this function will also cause the vehicle to accelerate briefly in certain situations other than passing another vehicle, for example using the left turn signal to indicate a lane change or a turn toward a highway exit at speeds above approximately 45 mph (70 km/h).

Queue Assist
Queue Assist is an added ACC feature that is linked to your vehicle’s automatic transmission.
Queue Assist consists of the following functions:
• Enhanced speed interval (including when the vehicle is at a complete stop or is moving at speed below 18 mph (30 km/h))
• Automatic standby mode when ACC changes target vehicles
• No automatic braking when at a standstill
• The parking brake is applied automatically

\(^3\) Does not apply to vehicles equipped with the optional Queue Assist
Please note that the lowest speed that can be set is 18 mph (30 km/h), although ACC can maintain a set speed/distance to a vehicle ahead down to a standstill. Queue Assist consists of the following features:

Enhanced speed interval

**NOTE**

The driver’s door must be closed and the driver’s seat belt must be fastened before ACC can be put in active mode. If the driver’s seat belt is taken off or if the driver’s door is opened, ACC will return to standby mode.

Your vehicle can maintain the set time interval to the vehicle ahead at any permissible speed, including a complete stop.

In order to activate ACC at speeds below 18 mph (30 km/h):

- The vehicle ahead must be within a reasonable distance (not farther away than approx. 100 ft/30 meters)
- The lowest speed that can be selected is 18 mph (30 km/h), although ACC will also help maintain the set time interval to the vehicle ahead at lower speeds, including a complete stop.

During short stops (less than approximately 3 seconds) in slow-moving traffic, your vehicle will begin moving again automatically as soon as the vehicle ahead begins to move.

If it takes more than 3 seconds for the vehicle ahead to begin moving, ACC will be automatically go into standby mode.

The driver will then have to reactivate ACC in one of the following ways:

- By pressing ☑
- By accelerating up to at least 3 mph (4 km/h). ACC will then resume following the vehicle ahead.

Your vehicle will then resume following the vehicle ahead at the set time interval.

**NOTE**

ACC can remain active and keep your vehicle at a standstill for up to 4 minutes. After 4 minutes have elapsed, the parking brake will be engaged and ACC will go into standby mode. To reactivate ACC, the driver must release the parking brake (see page 125).

**Automatic standby mode when ACC changes target vehicles**

If the vehicle ahead turns suddenly, there may be a stationary vehicle ahead

The following only applies at speeds below approximately 18 mph (30 km/h):

If ACC changes target vehicles (the vehicle that the radar sensor has detected) from a moving vehicle to a stationary one, the system will apply the brakes in your vehicle.

**WARNING**

At speeds above 18 mph (30 km/h), ACC will not react to a stationary vehicle and apply the brakes but will instead accelerate to the previously set speed. The driver must actively apply the brakes to stop the vehicle.

ACC disengages and goes into standby mode if:
Adaptive Cruise Control (ACC)*

- Your vehicle's speed goes below 10 mph (15 km/h) and ACC cannot determine if the target object is a stationary vehicle or some other type of object such as e.g., a speed bump.
- Your vehicle's speed goes below 10 mph (15 km/h) and the vehicle ahead turns so that ACC no longer has a target vehicle to follow.

No automatic braking when at a standstill
In certain situations, ACC will no longer apply the brakes and go into standby mode while the vehicle is not moving. This means that the driver will have to apply the brakes.

This happens if:
- The driver presses the brake pedal
- The parking brake is activated
- The gear selected is moved to P, N or R
- The driver presses the button to put ACC in standby mode

The parking brake is applied automatically
In certain situations, ACC will apply the parking brake in order to continue keeping the vehicle at a standstill.

This happens if:
- The driver opens the door or takes off his/her seat belt
- DSTC is put in Sport mode (see page 130)
- ACC has kept the vehicle at a standstill for more than 2 minutes
- The engine has been switched off
- The brakes have overheated

Turning ACC off completely
- From standby mode, press once.
- From active mode, press twice.

The set speed and time interval are then cleared from the system's memory and cannot be resumed by pressing .

The radar sensor and its limitations
In addition to being used by ACC, the radar sensor is also used by Distance Alert (see page 148) and Collision Warning with Full Auto-brake and Pedestrian Detection (see page 157). This sensor is designed to detect cars or larger vehicles driving in the same direction as your vehicle, in the same lane.

WARNING
Accessories or other objects, such as extra headlights, must not be installed in front of the grille.
Modification of the radar sensor could make its use illegal.

The radar sensor’s capacity to detect vehicles ahead is impeded:
- if the radar sensor is obstructed and cannot detect other vehicles, for example in heavy rain, or if snow or other objects are obscuring the radar sensor.

NOTE
Keep the area in front of the radar sensor clean.

- if the speed of vehicles ahead is significantly different from your own speed.

* Option/accessory, for more information, see Introduction.
Adaptive Cruise Control (ACC)*

Situations where ACC may not function optimally

**WARNING**

- The radar sensor has a limited field of vision. In some situations it may detect a vehicle later than expected or not detect other vehicles at all.
- If ACC is not functioning properly, cruise control will also be disabled.

In curves, the radar sensor may detect the wrong vehicle or lose sight of the target vehicle.

**WARNING**

- Adaptive Cruise Control cannot cover all driving situations and traffic, weather and road conditions. The "Function" section provides information about limitations that the driver must be aware of before using this feature.
- This system is designed to be a supplementary driving aid. It is not, however, intended to replace the driver’s attention and judgement. The driver is responsible for maintaining a safe distance and speed and must intervene if Adaptive Cruise Control does not maintain a suitable speed or suitable distance to the vehicle ahead.
- Maintenance of ACC components may only be performed by a trained and qualified Volvo technician.

1 In certain situations, the radar sensor cannot detect vehicles at close quarters, for example a vehicle that suddenly enters the lane between your vehicle and the target vehicle.

2 Small vehicles, such as motorcycles, or vehicles not driving in the center of the lane may remain undetected.

Radar sensor’s field of vision (shown in pink)
# Adaptive Cruise Control (ACC)*

## WARNING

- Adaptive Cruise Control is not a collision avoidance system. The driver is always responsible for applying the brakes if the system does not detect another vehicle.
- Adaptive Cruise Control does not react to people or animals, or small vehicles such as bicycles and motorcycles. It also does not react to slow moving, parked or approaching vehicles, or stationary objects.
- Do not use Adaptive Cruise Control in demanding driving conditions such as city driving or other heavy traffic situations, in slippery conditions, when there is a great deal of water or slush on the road, during heavy rain or snow, in poor visibility, on winding roads or on highway on- or off-ramps.

## Fault tracing and actions

If the message Radar blocked See manual is displayed, this means that the radar signals from the sensor have been obstructed and that a vehicle ahead cannot be detected.

This, in turn, means that the functions of the ACC, Distance Alert, and Collision Warning System with Auto-brake and Pedestrian Detection will not function.

The table lists possible causes for this message being displayed, and suitable actions.

<table>
<thead>
<tr>
<th>Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The surface of the radar in the grille is dirty or obstructed in some way.</td>
<td>Clean the radar surface, or remove the object causing the obstruction.</td>
</tr>
<tr>

Introduction
Distance Alert is part of Adaptive Cruise Control and is a function that provides information about the time interval to the vehicle ahead.

Distance Alert is active at speeds above approximately 18 mph (30 km/h). Time interval information is only given for a vehicle that is driving ahead of your vehicle in the same direction. No information is provided for vehicles driving toward you, moving very slowly, or at a standstill.

NOTE
Distance Alert only monitors distance to the vehicle ahead while Adaptive Cruise Control is in standby mode or off.

WARNING
Distance Alert only indicates the distance to the vehicle ahead. It does not affect the speed of your vehicle.

Operation
Press the button in the center instrument panel to switch this function on or off. The indicator light in the button illuminates when the function is on.

Setting a time interval
Press \( \text{to increase the interval or } \) \( \text{to decrease it.} \)

Amber warning light\(^1\).
An amber warning light in the windshield glows steadily if your vehicle is closer to the one ahead than the set time interval.

Depending on the optional equipment selected, there may not be room for a Distance Alert button in the center console. In this case, the function is controlled through the menu system. Press MY CAR and go to Settings ➔ Car settings ➔ Distance alert ➔ On/Off.

Controls and display
\( \text{Time interval: Increase/decrease} \)
\( \text{Time interval: On, while it is being set} \)
\( \text{Time interval: On, after it has been set} \)

\(^1\) The illustration is schematic - certain details may vary from model to model
Five different time intervals can be selected and are shown in the display as 1–5 horizontal bars. The greater the number of bars, the longer the time interval. One bar represents approximately 1 second to the vehicle ahead; 5 bars is approximately 2.5 seconds.

The number of bars indicating the selected time interval are shown while the setting is being made and for several seconds afterward. A smaller version of the symbol is then shown to the right in the display. The same symbol is displayed when Adaptive Cruise Control (ACC) is activated.

**NOTE**

- The higher your vehicle’s speed, the greater the distance to the vehicle ahead, measured in feet (meters), for a given time interval.
- The set time interval is also used by Adaptive Cruise Control, see page 139.

**WARNING**

Only use a time interval that is suitable in current traffic conditions.

**Limitations**

Distance Alert uses the same radar sensor used by Adaptive Cruise Control and the Collision Warning system. See page 143 for more information on the radar sensor’s limitations.

**WARNING**

- Bad weather or winding roads may affect the radar sensor’s capacity to detect vehicles ahead.
- The size of the vehicle ahead, such as a motorcycle, may also make it difficult to detect. This may result in the warning light illuminating at a shorter distance than the one that has been set, or that the light will not come on at all.

**NOTE**

Strong sunlight, reflections, extreme light contrasts, the use of sunglasses, or if the driver is not looking straight ahead may make the visual warning signal in the windshield difficult to see.

Introduction

City Safety™ is a support system designed to help the driver avoid low speed collisions when driving in slow-moving, stop-and-go traffic.

City Safety™ is not active if your vehicle’s speed is below approximately 2 mph (4 km/h). This means that City Safety™ will not react if your vehicle approaches another vehicle at very low speed, for example, when parking.

The function is active at speeds up to approximately 30 mph (50 km/h) and assists the driver by applying the brakes automatically, thereby avoiding or helping to reduce the effects of a collision.

City Safety™ is designed to intervene as late as possible to help avoid unnecessary activation.

City Safety™ triggers brief, forceful braking if a low-speed collision is imminent. However, the system will not intervene in situations where the driver actively steers the vehicle or applies the brakes, even if a collision cannot be avoided. This is done in order to always give the driver’s actions highest priority.

City Safety™ activates in situations where the driver has not applied the brakes in time, which means that the system cannot help the driver in all situations.

City Safety™ should not be used to alter the way in which the driver operates the vehicle. The driver should never rely solely on this system to safely stop the vehicle.

Normally, the occupants of the vehicle will not be aware of City Safety™ except when the system intervenes when a low-speed collision is imminent.

If the vehicle is also equipped with the optional Collision Warning with Full Auto-brake and Pedestrian Detection system, the two systems interact. For more information about the Collision Warning with Auto-brake system, see page 157.

WARNING

- City Safety™ only reacts to vehicles traveling in the same direction as your vehicle and does not react to small vehicles, bicycles or motorcycles or to people or animals.
- City Safety™ is not activated when your vehicle is backing up.
- City Safety™ functions at speeds up to 30 mph (50 km/h). This system can help prevent a collision if the difference in speed between your vehicle and the vehicle ahead is less than 9 mph (15 km/h). If the difference in speed is greater, a collision cannot be avoided but the speed at which the collision occurs can be reduced. The driver must apply the vehicle’s brakes for full braking effect.
- City Safety™ will not intervene in a potential collision situation if the vehicle is being driven actively. The driver is always responsible for maintaining a safe distance to a vehicle or object ahead.

1 City Safety is a registered trademark of the Volvo Car Corporation
04 Driver support

City Safety™

Function

Location of the laser sensor in the windshield

City Safety™ monitors traffic ahead of you using a laser sensor mounted in the upper section of the windshield. If a collision is imminent, City Safety™ will automatically apply the brakes, which may feel like hard braking.

If the difference in speed between your vehicle and the vehicle ahead is more than approximately 9 mph (15 km/h), City Safety™ alone cannot prevent a collision from taking place. The driver must apply the brakes to help avoid a collision or reduce its effect.

When the function activates and applies the brakes, a message will appear in the information display to indicate that the system is/has been active.

NOTE

- When City Safety™ applies the brakes, the brake lights will illuminate.
- In cases where City Safety™ has stopped the vehicle, the system will then release the brakes. The driver must apply the brakes to keep the vehicle at a standstill.

Using City Safety™

NOTE

The City Safety™ function is activated automatically each time the engine has been switched off and restarted.

On and Off

In certain situations, it may be desirable to switch City Safety™ off, such as when driving in close quarters where leaves, branches, etc. may obscure the hood and windshield.

When the engine is running, City Safety™ can be switched off as follows:

Press My Car in the center console control panel and go to Settings ➔ Car settings ➔ Driver support systems ➔ City Safety. Select Off.

If the engine is switched off, City Safety™ will reactivate when the engine is restarted.

WARNING

The laser sensor emits light when the ignition is in mode II or higher, even if City Safety™ has been switched off.

To switch City Safety™ on again:

- Follow the same procedure as for switching City Safety™ off but select On.

Limitations

The sensor used by City Safety™ is designed to detect cars and other larger motor vehicles ahead of your vehicle in both daylight and darkness.

---

2 The illustration is schematic; details will vary, depending on the model
**WARNING**

The laser sensor has certain limitations and its function may be reduced (or it may not function at all) in conditions such as heavy rain or snowfall, or by dense fog or thick, blowing dust or snow. Condensation, dirt, ice or snow on the windshield may also interfere with the sensor’s function.

Objects such as warning flags hanging from long objects on the roof or accessories such as auxiliary lights or protective arches on the front of the vehicle that are higher than the hood may also impede the sensor’s function.

Braking distance to the vehicle ahead increases on slippery road surfaces, which may reduce City Safety’s capacity to avoid a collision. In situations like this, the DSTC system (see page 130) will help provide the best possible braking capacity and stability.

City Safety™ emits a laser beam and measures the way in which the light is reflected. Therefore, vehicles or objects with low-reflective surfaces may not be detected. Normally, the license plate and taillight reflectors give the rear section of a vehicle ahead sufficient reflective surfaces to be detected.

**NOTE**

- Keep the windshield in front of the laser sensor free of ice, snow, dirt, etc. See page 152.
- Snow or ice on the hood deeper than 2 inches (5 cm) may obstruct the sensor. Keep the hood free of ice and snow.
- Do not mount or in any way attach anything on the windshield that could obstruct the laser sensor.

**NOTE**

- Keep the windshield in front of the sensor free of ice, snow, dirt, etc. See page 152.
- Snow or ice on the hood deeper than 2 inches (5 cm) may obstruct the sensor. Keep the hood free of ice and snow.
- Do not mount or in any way attach anything on the windshield that could obstruct the laser sensor.

**Troubleshooting**

If **Windscreen Sensors blocked** appears in the information display, this indicates that the City Safety™ laser sensor is obstructed in some way and cannot detect vehicles ahead of you, which means that the system is not functioning.

However, this message will not be displayed in all situations in which the sensor is obstructed. For this reason, the driver must ensure that the area of the windshield in front of the sensor is always kept clean.

The following table shows some of the situations that can cause the message to be displayed and suggested actions.

<table>
<thead>
<tr>
<th>Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The area of the windshield in front of the sensor is dirty or covered by ice or snow.</td>
<td>Clean the windshield or remove the ice/snow.</td>
</tr>
<tr>
<td>The laser sensor’s field of view is obstructed.</td>
<td>Remove the obstruction.</td>
</tr>
</tbody>
</table>
CAUTION

If a crack, scratch or stone chip should occur in the section of the windshield in front the laser sensor, contact a trained and qualified Volvo service technician to repair or replace the windshield (see the illustration showing the location of the sensor on page 152). Failing to do so may result in reduced City Safety™ functionality.

To help prevent reduced functionality, please also observe the following:

- Before the windshield is replaced, contact a Volvo retailer to ensure that the correct windshield is ordered and installed. If the wrong type of windshield is used, this may cause City Safety™ to function improperly or not at all. Volvo recommends the use of only Genuine Volvo Replacement Windshields.
- When replacing windshield wipers, use the same type or ones approved by Volvo.

The laser sensor

The upper decal describes the laser beam’s classification and contains the following text:

Invisible Laser radiation – Do not view directly with optical instruments (magnifiers) – Class 1M laser product.

The lower decal describes the laser beam’s physical data and contains the text:

The laser beam’s physical data is listed in the following table:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum pulse energy</td>
<td>2.64 μJ</td>
</tr>
<tr>
<td>Maximum average output</td>
<td>45 mW</td>
</tr>
<tr>
<td>Pulse length</td>
<td>33 ns</td>
</tr>
<tr>
<td>Divergence (horizontal × vertical)</td>
<td>28° × 12°</td>
</tr>
</tbody>
</table>

NOTE

The function of aftermarket laser detectors may be affected by City Safety’s laser sensor.

WARNING

The laser sensor emits light when the ignition is in mode II or higher, even if City Safety™ has been switched off.
WARNING

Eye injury may occur if any of the following points are not followed:

- It is essential that all pertinent instructions be followed when handling laser instruments. Testing, repairing, removing, adjusting and/or replacing any components in the laser sensor may only be done by a trained and qualified Volvo service technician.
- Do not remove the laser sensor (including removal of the lenses). A laser sensor that has been removed belongs to laser class 3B according to standard IEC 60825-1. Devices in laser class 3B present a risk of injury to the eyes.
- The laser sensor’s connector must be disconnected before the sensor is removed from the windshield.
- The laser sensor must be mounted in place on the windshield before connecting the sensor’s connector.
- Do not view the laser sensor (which emits spreading, invisible laser beams) with optical instruments from a distance of less than 4 inches (100 mm).

Symbols and messages in the display

When City Safety™ automatically applies the brakes, one or more of the symbols in the main instrument panel may illuminate and its associated message will be displayed.

A text message can be erased by pressing briefly on the OK button on the turn signal lever.

Introduction
Collision Warning with Full Auto-brake and Pedestrian Detection is designed to assist the driver if there is a risk of a collision with a pedestrian, a vehicle ahead that is at a standstill or one that is moving in the same direction as your vehicle.

Collision Warning consists of the following three functions:

- **Collision Warning** warns the driver of a potential collision situation.
- **Brake Support** helps the driver brake efficiently in a critical situation.
- **Auto-brake** brakes the vehicle automatically if a collision with a pedestrian or another vehicle cannot be avoided and the driver does not apply the brakes in time or steer around the person/vehicle. Auto-brake can help prevent a collision or reduce the speed at which a collision occurs.

Since Collision Warning with Full Auto-brake and Pedestrian Detection is activated in circumstances where the driver should have begun braking much sooner, the system will not be able to assist the driver in all situations.

This system is designed to activate as late as possible to help avoid unnecessary intervention.

The system should not be used in such a way that the driver changes his/her way of operating the vehicle. If the driver relies entirely on the system, the chances of an accident eventually occurring increase considerably.

The Collision Warning and City Safety™ systems supplement each other. See page 151 for detailed information about City Safety™.

**WARNING**
No automatic system can be guaranteed to function 100% correctly in all situations. For that reason, never test the Auto-brake system by driving toward a person or object. This could result in serious injury or death.

**WARNING**
- Collision Warning does not work in all driving, traffic, weather and road conditions. It does not react to vehicles not traveling in the same direction as your vehicle.
- Collision Warning does not react to animals.
- Warnings are only provided when the risk of collision is high. The "Function" section provides information about limitations that the driver must be aware of before using Collision Warning.
- Collision Warning will not provide a warning or brake the vehicle for pedestrians at speeds above 50 mph (80 km/h).
Collision warning with Full Auto-brake and Pedestrian Detection*

**WARNING**

- Collision Warning will not provide a warning or brake the vehicle for pedestrians in darkness or in tunnels, even if there is street lighting in the area.
- The auto-brake function can help prevent a collision or reduce the speed at impact but the driver should always apply the brakes for the best possible braking effect, even if auto-brake is actively applying the brakes.
- Never wait for a collision warning. This system is designed to be a supplementary driving aid. It is not, however, intended to replace the driver’s attention and judgement. The driver is responsible for maintaining a safe distance and speed, even when the collision warning system is in use.
- Maintenance of the Collision Warning system’s components must only be performed by a trained and qualified Volvo technician.

### Function

![Function overview](image)

**1** Audio-visual warning signals, collision risk

**2** Radar sensor

**3** Camera

### Collision Warning

The radar sensor and the camera work together to detect a pedestrian, stationary vehicles and vehicles that are moving in the same direction as your vehicle. If there is a risk of collision with a vehicle or a pedestrian, the driver is alerted by a flashing red warning light and an audible warning signal. Collision warning is active at speeds above 3 mph (4 km/h).

### Brake Support

If the risk of collision continues to increase after the collision warning has been given, Brake Support is activated. Brake Support prepares the brake system to react quickly, and the brakes are applied slightly. This may be experienced as a light tug.

If the brakes are applied quickly, full braking effect will be provided. Brake Support also increases brake force if the system determines that the driver has not applied adequate pressure on the brake pedal.

### Auto-brake

If a collision is imminent and the driver has not applied the brakes or begun to steer around the vehicle or pedestrian, the auto-brake function is activated without the driver pressing the brake pedal. Full brake force is applied to help reduce the vehicle's speed when the collision occurs or limited brake force is applied if this is sufficient to avoid the collision.

**NOTE**

The auto-brake and brake support functions are always on and cannot be turned off.

* Option/accessory, for more information, see Introduction.
Collision warning with Full Auto-brake and Pedestrian Detection*

Operation
Settings are made by pressing MY CAR on the center console control panel and using the menus displayed.

Activating/deactivating both warning signals
To switch Collision Warning's audible and visual signals on or off at the same time, press MY CAR on the center console control panel and go to Settings ➔ Car settings ➔ Driver support systems ➔ Collision Warning. If Collision Warning is on, the system will perform a self-test each time the engine is started by briefly illuminating the warning light. See page 189 for a description of the menu system.

When the engine is switched on, the Collision Warning setting that was being used when it was switched off will be the default setting.

Activating/deactivating the audible warning signal only
The audible warning signal can be activated/deactivated by pressing MY CAR on the center console control panel and going to Settings ➔ Car settings ➔ Driver support systems ➔ Warning sound if risk of collision.

Setting a warning distance
This setting determines the distance at which the visual and audible warnings are triggered. Select Long, Normal or Short by pressing MY CAR on the center console control panel and going to Settings ➔ Car settings ➔ Driver support systems ➔ Collision Warning ➔ Warning distance.

The warning distance determines the level of sensitivity used by the system. The warning distance Long provides an earlier warning. Begin by using Long and if the system gives too many warnings, try changing to Normal.

NOTE
The auto-brake and pedestrian detection features are always on, even if the audible and visual warning signals have been deactivated.

WARNING
- The setting Short should only be used in situations where traffic is light and moving at low speeds.
- Collision Warning alerts the driver to the risk of a collision but this function cannot reduce the driver’s reaction time.
- For Collision Warning to be as effective as possible, it is recommended that Distance Alert be set to 4 or 5, see page 148.

NOTE
- When Adaptive Cruise Control is used, the warning light and signal will be used by that function, even if the warnings provided by Collision Warning have been deactivated by the driver.
- In situations where traffic is moving at considerably different speeds, or if the vehicle ahead brakes suddenly, warnings may be considered to be late, even if the setting Long has been selected.

Checking settings
The current Collision Warning settings can be checked by pressing MY CAR on the center console control panel and going to Settings ➔ Car settings ➔ Driver support systems ➔ Collision Warning.

Limitations
Strong sunlight, reflections, extreme light contrasts, the use of sunglasses, or if the driver is not looking straight ahead may make the visual warning signal in the windshield difficult to see. For this reason, always activate the audible warning signal.

Slippery driving conditions increase braking distance, which can reduce the system’s...
Capacity to avoid a collision. In these conditions, the ABS and DSTC systems provide the best possible braking effect while helping to maintain stability.

**NOTE**
The visual warning signal may be temporarily disengaged in the event of high passenger compartment temperature due to strong sunlight, etc. If this occurs, the audible warning signal will be used, even if it has been deactivated in the menu system.

**WARNING**
- In certain situations, the system cannot provide warnings or warnings may be delayed if traffic conditions or other external factors make it impossible for the radar sensor or camera to detect a pedestrian or a vehicle ahead.
- Warnings may not be provided if the distance to the vehicle ahead is short, or if movements of the steering wheel/brake pedal are great, such as during active driving.
- The sensor system has a limited range for pedestrians and provides warnings and braking effect most effectively at speeds up to 30 mph (50 km/h). For stationary or slow-moving vehicles, the system functions best if your vehicle’s speed is below approximately 45 mph (70 km/h).
- Warnings for stationary or slow-moving vehicles may not be provided in dark conditions or in poor visibility.

The Collision Warning system uses the same radar sensors as Adaptive Cruise Control. For more information on the radar sensor and its limitations, see page 143.

**NOTE**
If warnings are given too frequently, the warning distance can be reduced (see page 159). This causes the system to provide later warnings, which decreases the total number of warnings provided.

**WARNING**
- The system is not activated at speeds under approx. 2 mph (4 km/h). Therefore, it will not brake your vehicle if you approach a vehicle ahead at very low speed, such as when parking.
- The driver’s actions always have highest priority and override the Collision Warning system. This means that the system will not intervene in situations where the driver is actively steering, braking or pressing the accelerator pedal, even if a collision is imminent.
- When Auto-brake has prevented a collision with a stationary object, your vehicle will remain at a standstill for approx. 1.5 seconds. If your vehicle has been braked for a moving vehicle ahead, your vehicle’s speed will be reduced to the same speed as that vehicle’s.
Collision warning with Full Auto-brake and Pedestrian Detection*

The camera’s limitations
The camera is used by Collision Warning with Auto-brake, Driver Alert Control (see page 165), and Lane Departure Warning (see page 168).

NOTE
- To help protect the camera in very hot conditions, it may be temporarily switched off for approximately 15 minutes after the engine has been started.
- Keep the section of the windshield in front of the camera clean and free of ice, snow, or condensation.

WARNING
- The camera has the same limitations as the human eye. In other words, its “vision is impaired” by adverse weather conditions such as heavy snowfall, dense fog, etc. These conditions may reduce the function of systems that depend on the camera or cause these systems to temporarily stop functioning.
- Never place any objects, decals, etc., on the windshield in front of the camera. This could reduce or block the camera’s function, and could cause one or more of the systems that utilize the camera to stop functioning.
- Strong sunlight, reflections from the road surface, ice or snow covering the road, a dirty road surface, or unclear lane marker lines may drastically reduce the camera’s capacity to detect the side of a lane, a pedestrian or another vehicle.

Pedestrians

The system cannot identify all pedestrians

The Collision Warning system can only identify and detect a pedestrian who is standing upright. This person can be standing still, walking or running.

This means that the system has to be able to identify a person’s head, arms, shoulders, legs, the upper and lower parts of the body and a person’s pattern of movement when walking or running.

If parts of the body are not visible to the camera, the system cannot detect the pedestrian.

The following conditions apply:
- In order to detect a pedestrian, the system must have a full view of the person’s entire...
Collision warning with Full Auto-brake and Pedestrian Detection*

Body and the person must be at least 32 in. (80 cm) tall.

- The system cannot detect a pedestrian carrying a large object.
- The camera’s capacity to see a pedestrian at dawn or dusk is limited, much as it is for the human eye.
- The camera’s function is deactivated and will not detect a pedestrian in darkness or in tunnels, even if there is street lighting in the area.

**WARNING**

- Collision Warning with Full Auto-brake and Pedestrian Detection is designed to be a supplementary driving aid. It is not, however, intended to replace the driver’s attention and judgement. The driver is always responsible for operating the vehicle in a safe manner.
- The system cannot detect all pedestrians in all situations, such as in darkness/at night and cannot detect partially hidden pedestrians, people who are less than approx. 32 in. (80 cm) tall, or people wearing clothing that obscures the contours of their bodies.

**Fault tracing and actions**

If the message *Windscreen Sensors blocked* is displayed, this means that the camera is obscured and cannot detect pedestrians, vehicles or road marker lines in front of the vehicle.

This, in turn, means that Collision Warning with Full Auto-brake and Pedestrian Detection, Lane Departure Warning, and Driver Alert Control will not have full functionality.

The table lists possible causes for this message being displayed, and suitable actions.
### Collision warning with Full Auto-brake and Pedestrian Detection*

Introduction
The Driver Alert System is designed to help a driver who may be becoming fatigued or who is inadvertently leaving the lane.

The Driver Alert System consists of two different functions that can be switched on together or separately.

- Driver Alert Control (DAC)
- Lane Departure Warning (LDW), see page 168

When one or both of the functions has been switched on, it is in standby mode and is activated when the vehicle exceeds a speed of 40 mph (65 km/h).

The function deactivates if the vehicle’s speed goes under 37 mph (60 km/h).

Both functions use a camera that is dependent on the road/lane being clearly marked by painted lines on each side.

**WARNING**
The Driver Alert System does not function in all situations and is designed to be a supplementary aid. It is not, however, intended to replace the driver’s attention and judgement.

Driver Alert Control (DAC) – introduction

This function is intended to alert the driver if his/her driving becomes erratic, such as if the driver is distracted or fatigued.

**NOTE**
The camera has certain limitations, see page 143.

A camera monitors the painted lines marking the lane in which the vehicle is traveling and compares the direction of the road with the driver’s movements of the steering wheel. The driver is alerted if the vehicle does not follow the lane smoothly.

DAC is designed to help detect a slowly changing driving pattern. It is primarily intended to be used on main roads and is not meant for use in city traffic.

**WARNING**
- DAC is not intended to extend the duration of driving. Always plan breaks at regular intervals to help remain alert.
- In certain cases, fatigue may not affect the driver’s behavior. In situations of this type, no warning will be provided. Therefore, it is important to take breaks at regular intervals, regardless of whether or not DAC has given a warning.

Limitations
In certain situations, DAC may provide warnings even if the driver’s driving pattern has not become erratic.

- if the driver is testing the LDW function
- in strong crosswinds
- on grooved road surfaces.
**Driver Alert System***

**Operating DAC**
Certain settings can be made from the menu system controlled from the center instrument panel.

The current system status can be checked on the trip computer’s display by using the buttons on the left steering wheel lever.

1. Thumb wheel. Turn this wheel until **Driver Alert** is displayed. The second line shows the alternatives **Off Driver Alert Standby <40 mph (Driver Alert Standby <65 km/h)**, **Unavailable** or the level (number of bars) will be displayed.

2. **OK** button. Confirms and erases a message in the display.

**Activating DAC**
Press **MY CAR** in the center instrument panel and go to **Car settings ➔ Driver Alert** and select **On**. See page 189 for more information on the menu system.

The function is activated when the vehicle exceeds a speed of 40 mph (65 km/h). The display will show level markings of 1–5 bars, where a low number of bars indicates erratic driving. A high number of bars indicates stable driving.

If the vehicle is being driven erratically, the driver will be alerted by an audible signal and the message **Driver Alert, Time for a break** is displayed. The warning will be repeated after a short time if the driving pattern remains the same.

**WARNING**
- An alert should be taken seriously since it is sometimes difficult for a driver to realize that he/she is fatigued.
- In the event of a warning or if the driver feels fatigued, stop as soon as possible in a safe place and rest.

Driver Alert System*

Lane Departure Warning (LDW) – introduction

This function is designed to help reduce the risk of accidents in situations where the vehicle leaves its lane and there is a risk of driving off the road or into the opposite lane. LDW consists of a camera that monitors the lane’s side marker lines. The driver is alerted by an audible signal if the vehicle crosses a side marker line or the road’s center dividing line.

Operation and function

LDW can be switched on or off by pressing the button on the center console. A light in the button illuminates when the function is on.

The trip computer display shows Lane Depart Warn Standby <40 mph (Lane Depart Warn Standby <65 km/h) when the function is in standby mode.

When LDW is in standby mode, the function is activated automatically after the camera has monitored the road’s side marker lines and the vehicle’s speed exceeds 40 mph (65 km/h). Lane Depart Warn Unavailable will be displayed.

If the vehicle’s speed falls below 37 mph (60 km/h), LDW will return to standby mode and Driver Alert Standby <40 mph will be displayed.

If the camera can no longer monitor the road’s side marker lines, Lane Depart Warn Unavailable will be displayed.

If the vehicle unexpectedly crosses the lane’s left or right side marker lines, the driver will be alerted by an audible signal.

No warning signal will be given in the following situations:

- The turn signal is being used
- The driver’s foot is on the brake pedal
- The throttle pedal is pressed quickly
- If the steering wheel is moved quickly
- In sharp turns that cause the vehicle’s body to sway

See page 161 for information on the camera’s limitations.

WARNING

The driver will only be warned once for each time the wheels cross a marker line. No alarm will be given if a marker line is between the wheels.

---

1 When Increased sensitivity has been selected, a warning will be issued if a side marker line is crossed in this situation.
**Settings**

Settings for Lane Departure Warning can be made in the menu system by pressing **My Car**. Go to **Settings ➔ Car settings ➔ Driver support systems ➔ Lane Departure Warning**.

There are two alternatives:

**On at start-up:** This selection switches LDW on each time the engine is started. Otherwise, the system will be in the mode that it was in when the engine was switched off.

**Increased sensitivity:** This selection increases the function’s sensitivity. Warnings will be given at an earlier stage and fewer limitations apply. When this setting is being used, the system only needs to monitor lane marker lines on one side of the vehicle to change status to **Lane Depart Warn Available**.

</tr>
</tbody>
</table>
**Introduction**

The park assist system is designed to assist you when driving into parking spaces, garages, etc. It utilizes ultrasound sensors in the front bumper and rear bumper(s) to measure the distance to a vehicle or an object that may be close to the front or rear of your vehicle. An audible signal and symbols in the audio system’s display indicate the distance to the object.

**WARNING**

Park Assist is an information system, NOT a safety system. This system is designed to be a supplementary aid when parking the vehicle. It is not, however, intended to replace the driver’s attention and judgement.

**NOTE**

A trailer hitch whose wiring is integrated with the vehicle’s electrical system will be included in the measurement of the available space behind the vehicle.

**Function**

*Park assist button*

The system is activated automatically when the vehicle is started. The indicator light in the button in the center console illuminates when the system is on.

- The front park assist system is active from the time the engine is started until the vehicle exceeds a speed of approximately 10 mph (15 km/h). It is also active when the vehicle is backing up.
- Rear park assist is active when the engine is running and reverse gear has been selected.

**Activating/deactivating**

The system is activated automatically when the vehicle is started.

- Press the Park assist button on the center console to temporarily deactivate the system(s).
  > The indicator light in the button will go out when the system has been deactivated.

Park assist will be automatically reactivated the next time the engine is started, or if the button is pressed (the indicator light in the button will illuminate).

**NOTE**

Park assist is disengaged automatically when the parking brake is applied.
Signals from the park assist system

View in the display (warning for objects front left/right rear)

Visual indicator
The audio system’s display gives an overview of the vehicle’s position in relation to a detected object.

The marked sectors in the display indicate that one or more of the sensors has detected an object. The closer the car symbol comes to a sector, the closer the vehicle is to the object.

If the infotainment system is switched off, the park assist system will not be able to provide a visual indicator. An audible signal will still be provided.

Audible signal
The Park Assist system uses an intermittent tone that pulses faster as you come close to an object, and becomes constant when you are within approximately 1 ft (30 cm) of an object in front of or behind the vehicle. If there are objects within this distance both behind and in front of the vehicle, the tone alternates between front and rear speakers.

Rear park assist

The distance monitored behind the vehicle is approximately 5 ft (1.5 m). The audible signal comes from the rear speakers.

The system must be deactivated when towing a trailer, carrying bicycles in a rear-mounted carrier, etc, which could trigger the rear park assist system’s sensors.

NOTE
Rear park assist is deactivated automatically when towing a trailer if Volvo genuine trailer wiring is used.
Front park assist

The distance monitored in front of the vehicle is approximately 2.5 ft (0.8 m). The audible signal comes from the audio system’s front speakers.

It may not be possible to combine auxiliary headlights and front park assist since these lights could trigger the system’s sensors.

NOTE

Front park assist is deactivated when the parking brake is applied and or when the gear selector is in the P position.

Faults in the system

If the information symbol illuminates and Park assist syst Service required is shown on the information display, this indicates that the system is not functioning properly and has been disengaged. Consult a trained and qualified Volvo service technician.

WARNING

In certain circumstances, the park assist system may give unexpected warning signals that can be caused by external sound sources that use the same ultrasound frequencies as the system. This may include such things as the horns of other vehicles, wet tires on asphalt, pneumatic brakes, motorcycle exhaust pipes, etc. This does not indicate a fault in the system.

Cleaning the sensors

The sensors must be cleaned regularly to ensure that they work properly. Clean them...
**Park assist***

with water and a suitable car washing detergent.

Ice and snow covering the sensors may cause incorrect warning signals.

**NOTE**

If the sensors are obstructed by e.g., dirt, snow, or ice, this could result in false warning signals from the park assist system.

* Option/accessory, for more information, see Introduction.
Introduction
The Park Assist Camera uses the display in the center console to show the area behind the car while you are backing up.

PAC also shows guiding lines in the on-screen image to indicate the direction that the vehicle will take as it moves rearward, which helps simplify parallel parking, backing into a tight space or when attaching a trailer to the vehicle.

NOTE
A trailer hitch whose wiring is integrated with the vehicle’s electrical system will be included in the measurement of the available space behind the vehicle.

WARNING
- PAC is designed to be a supplementary aid when parking the vehicle. It is not, however, intended to replace the driver’s attention and judgment.
- The camera has blind spots where it cannot detect objects or people behind the vehicle.
- Pay particular attention to people or animals that are close to the vehicle.

Function
The driver sees what is behind the vehicle and if a person or animal should suddenly appear from the side.

PAC is mounted on the rear of the trunk lid, near the opening handle.

The camera has built-in electronics that help reduce the “fish-eye” effect so that the image shown on the screen is as natural as possible. This may cause some objects on the screen to “lean,” which is normal.

WARNING
Objects seen on the screen may be closer than they appear to be.

Ambient lighting conditions
The camera automatically monitors the ambient lighting conditions behind the vehicle and constantly adjusts sensitivity to light. This may cause the brightness and quality of the image on the screen to vary slightly. Sensitivity to light is increased in dark conditions or in bad weather, which may affect image quality.

If the image on the screen seems too dark, brightness can be increased with the thumb wheel on the lighting panel.

NOTE
In order to function properly, the camera lens should always be kept clean. This is particularly important in bad weather. Keep the lens free of dirt, ice or snow.
04 Driver support

**Rear Park Assist Camera (PAC)**

**Using PAC**

**Activation**

With the camera zoomed in on the trailer hitch, a guiding line showing the hitch’s path toward the trailer will be projected. This feature can be activated in the MY CAR menu. See page 189 for a description of the menu system. The guiding lines for the wheels (see the following section "Guiding lines") and for the trailer hitch cannot be displayed at the same time.

If the camera shows an enlarged (zoomed) image, turn TUNE counterclockwise, or press EXIT, CAM or OK to return to a normal view.

**Deactivation**

Move the gear selector from R to another position. There is a slight delay in the PAC system, which means that the view from behind the vehicle will remain on the screen for approximately 15 seconds after the gear selector has been moved from the R position or until the vehicle reaches a forward speed of 6 mph (10 km/h). The screen will then revert to the mode that it was in before R was selected and will, for example, display navigation system information.

**Guiding lines**

The lines on the screen are projected as if they were a path on the ground behind the vehicle and are affected by the way in which the steering wheel is turned. This enables the driver to see path the vehicle will take, even if he/she turns the steering wheel while backing up.

**NOTE**

When backing up with a trailer, the guiding lines show the path that the vehicle will take, not the trailer.

**NOTE**

If any button on the center console control panel is pressed, the camera image will disappear from the display. Pressing CAM will return the camera image to the display.

PAC is activated when the gear selector is moved to R if the system is selected in the MY CAR menu system or by pressing the CAM button in the center console. See page 189 for a description of the menu system.

If the Volvo Navigation System (VNS) is in use, PAC will automatically override the navigation system to show the camera’s image on the screen instead of navigation information, for as long as reverse gear is selected.

**Zoom**

The camera can be useful when attaching a trailer. Press CAM to zoom in on the trailer hitch (and press this button again to return to the normal camera view).
**Rear Park Assist Camera (PAC)**

**WARNING**
Keep in mind that the image on the screen only shows the area behind the vehicle. The driver must always watch for people, animals, other vehicles, etc., near the sides of the vehicle when turning while backing up.

**Marker lines**

1. Marker line for a 1-foot (30-centimeter) zone behind the vehicle
2. Marker line for the clear back-up zone
3. "Wheel tracks"

The solid line (1) indicates a zone within 1 ft (30 centimeters) of the rear bumper.

The dashed line (2) indicates the clear zone of approximately 5 feet (1.5 m) behind the bumper. These lines also indicate the outmost limits that any object (door mirrors, corners of the body, etc.) extends out from the vehicle, even when the it turns.

The "wheel tracks" (3) between the side marker lines show where the wheels will roll and can extend up to approximately 10.5 ft (3.2 m) behind the bumper if there are no objects in the way.

**Vehicles equipped with Park Assist**

Colored fields (4—one per sensor) indicate distance

If the vehicle is equipped with the optional Park Assist system, the distance to an object will be indicated more exactly and colored markers in the display indicate which of the sensor(s) has detected the object.

The markers change color (from yellow to orange to red) as the vehicle comes closer to the object.

**Marker (color)** | **Distance to object**
--- | ---
Yellow | more than 5 ft (1.5 m)
Orange | 5–1 ft (0.3–1.5 m)
Red | 0–1 ft (0–0.3 m)

**Settings**
Press OK/MENU when a normal camera view is displayed and make the desired settings.

**Parking camera settings**

- Mark Guide lines to display the sidelines while backing up.
- Mark Distance bars to display the intersecting lines while backing up.

**Activating the system**

- Mark Automatic activation of rear camera to activate PAC each time reverse gear is selected.
- Mark Off to turn off PAC completely.

**Summary**

- The camera is activated when the gear selector is moved to R (this can be changed in the MY CAR menu) and the

* Option/accessory, for more information, see Introduction.
**Rear Park Assist Camera (PAC)**

- This setting can be changed in the in **MY CAR** menu.

- If there are two cameras installed on the vehicle*, to switch between cameras, turn **TUNE** (at least one of the cameras has to be active), press **CAM** repeatedly or use the center console controls. If the front camera is on, it overrides the optional park assist system’s visual indicator but there will still be an audible signal.

**Limitations**

Even if a fairly small section of the screen image appears to be obstructed, this may mean that a relatively large area behind the vehicle is hidden and objects there may not be detected until they are very near the vehicle.

**NOTE**

Bicycle carriers or other accessories mounted on the trunk may obstruct the camera’s field of view.

**Keep in mind**

- Keep the camera’s lens free of dirt, ice and snow. Remove ice and snow carefully to avoid scratching the lens.

- Clean the lens regularly with warm water and a suitable car washing detergent.
Introduction

BLIS camera

Indicator light

BLIS symbol

The Blind Spot Information System (BLIS) is an information system that indicates the presence of another vehicle moving in the same direction as your vehicle in the side-view mirror’s "blind area."

CAUTION

The BLIS system should only be repaired by a trained and qualified Volvo service technician.

WARNING

• BLIS is an information system, NOT a warning or safety system.
• BLIS does not eliminate the need for you to visually confirm the conditions around you, and the need for you to turn your head and shoulders to make sure that you can safely change lanes.
• As the driver, you have full responsibility for changing lanes in a safe manner.

The system is based on digital camera technology. The cameras are located beneath the side-view mirrors.

When one (or both) of the cameras have detected a vehicle in the blind area (up to approximately 10 ft. (3 meters) from the side of your vehicle, and up to approximately 31 ft. (9.5 meters) behind the side-view mirror), see the illustration, the indicator light in the door panel illuminates. The light will glow continuously to alert the driver of the vehicle in the blind area.

NOTE

The door panel indicator light illuminates on the side of the vehicle where the system has detected another vehicle. If your vehicle is passed on both sides at the same time, both lights will illuminate.

BLIS has an integrated function that alerts the driver if a fault should occur with the system. For example, if one or both of the system’s cameras are obscured, a message (see the table on page 181) will appear in the information display in the instrument panel. If this occurs, clean the camera lenses. If necessary, the system can be temporarily switched off (for instructions, see page 181).

Areas monitored by BLIS Distance A = approx. 31 ft. (9.5 meters), Distance B = approx. 10 ft. (3 meters)
04 Driver support

Blind Spot Information System*

**When does BLIS function**
The system functions when your vehicle is moving at speeds above 6 mph (10 km/h).

**When you pass another vehicle:**
The system reacts when you pass another vehicle at a speed of up to 6 mph (10 km/h) faster than that vehicle.

**When you are passed by another vehicle:**
The system reacts if your vehicle is passed by another vehicle at a speed of up to 43 mph (70 km/h) faster than your vehicle.

**WARNING**
- BLIS does not function in sharp curves.
- BLIS does not function when your vehicle is backing up.
- If you are towing a wide trailer, this may prevent the BLIS cameras from detecting other vehicles in adjacent lanes.

**How BLIS functions in daylight and darkness**

**Daylight**
BLIS reacts to the **shape** of surrounding vehicles. The system is designed to help detect motor vehicles such as cars, trucks, buses, motorcycles, etc.

**Darkness**
BLIS reacts to the **headlights** of surrounding vehicles. In order to be detected by BLIS, a vehicle in the blind area must have its headlights on. This means, for example, that the system will not detect a trailer without headlights that is being towed behind a car or truck.

**WARNING**
- BLIS does not react to cyclists or mopeds.
- BLIS does not react to vehicles that are standing still.
- The BLIS cameras have the same limitation as the human eye. In other words, their "vision is impaired" by adverse weather conditions such as heavy snowfall, intense light directly into the camera, dense fog, etc.

**Limitations**
In certain situations, the BLIS indicator light(s) may illuminate even when there are no other vehicles in the area monitored by the system.

**NOTE**
If the BLIS indicator lights illuminate occasionally even when there are no other vehicles in the blind area, this does not indicate a fault in the system.

In the event of a fault, **Blind spot syst. Service required** will be displayed.

The following are several examples of situations in which the BLIS indicator light(s) may illuminate even when there are no other vehicles in the area monitored by the system.

* Option/accessory, for more information, see Introduction.
The vehicle’s own shadow against a large, light, smooth surface such as barriers between lanes on a highway

Sunlight directly in the camera when the sun is low on the horizon

Cleaning the BLIS camera lenses

In order to function optimally, the BLIS camera lenses must be kept clean. They can be wiped clean with a soft cloth or wet sponge.

CAUTION

- Clean the lenses carefully to avoid scratching.
- The lenses are electrically heated to help melt ice or snow. If necessary, gently brush away snow from the lenses.

Switching BLIS on and off

BLIS is automatically activated when the ignition is switched on. The indicator lights will provide confirmation by flashing 3 times.

- The system can be switched off by pressing the BLIS button in the center console (see the illustration). The indicator light in the button goes out when the system is switched off, and a text message is displayed.
- BLIS can be switched on again by pressing the button. The indicator light in the button will illuminate and a new text message will be displayed. Press the OK button (see page 187) to erase the message.

Depending on the vehicle’s optional equipment, there may not be space for the BLIS button in the center console. In this case, BLIS can be switched on and off in the menu system by pressing MY CAR and going to Settings ➔ Car settings ➔ BLIS. See page 189 for a description of the menu system.

COMFORT AND DRIVING PLEASURE
Volvo Sensus

Introduction

Volvo Navigation System (VNS)* – NAV: see the separate VNS manual for operating instructions.

Infotainment (RADIO, MEDIA, TEL): see page 212.

Vehicle-related settings - MY CAR: see page 189.

Park assist camera - CAM*: see page 175.

Climate system: see page 195.

Volvo Sensus is the operating system in your vehicle providing a coordinated interface for a number of functions such as the individualized settings that can be made in the MY CAR menus, the climate and infotainment systems as well as other options such as the park assist camera(s), etc.

Volvo Sensus uses the screen in the center instrument panel to display information and selections are made using this panel’s controls and buttons. Certain features can also be controlled using the steering wheel keypad.

Press MY CAR to present all of the available settings related to driving and/or controlling the vehicle, such as City Safety, setting the clock, lock settings, etc.

Press RADIO, MEDIA, TEL, NAV* and CAM* to change a source and to activated systems or functions such as AM, FM1, CD, DVD, Bluetooth, navigation* and the park assist camera*.

See the respective sections in this manual for more detailed information about your vehicle’s various features and functions.

* Option/accessory, for more information, see Introduction.
Main instrument panel

Information display and menu controls

1. **OK** – access to the list of messages and message confirmation.
2. Thumb wheel – browse among menus and options in the list of functions.
3. **RESET** – reset the active function. Used in certain cases to select/activate a function, see the explanation under each respective function.

The menus shown on the information displays in the instrument panel are controlled with the left lever. The menus shown depend on ignition mode. Press **OK** to erase a message and return to the menus.

Introduction

The menu system provides access to menus for operating many of the vehicle’s functions, such as setting the clock, door mirrors, locks, etc.

Navigating in the menus is done using the buttons on the center console control panel or with the right-side steering wheel keypad.

Some of the features mentioned in this section are optional.

Operation

Center console controls

1. Press MY CAR to access the My Car menus.
2. Press OK/MENU to select a highlighted selection or to store a certain function in the system's memory.
3. Turn to navigate up/down among menu selections.
4. EXIT

EXIT functions

The results of a short press on EXIT vary, depending on where the cursor is and where you are in the menu structure.

- Reject and incoming phone call
- The current function will be cancelled
- Characters that have been entered will be erased
- The most recent selection will be cancelled
- Go back (upward) in the menu system

A long press will take you to the highest menu level (the main view), giving you access to all of the vehicles/menus. See page 213 for additional information.

Steering wheel keypad

The keypad varies according to the vehicle’s equipment

1. Turn the thumb wheel to go up/down among menu selections. Press the thumb
05 Comfort and driving pleasure

The MY CAR menus

wheel to make a selection or store a function in the system’s memory.

2 EXIT.

Paths
The current menu level is displayed at the upper right of the center console display. Menu paths are displayed as follows, for example:

Settings ➔ Car settings ➔ Lock settings ➔ Doors unlock ➔ Driver door, then all

The following is an example of how to set a function in the menu system:

1. Press the MY CAR button on the center console control panel.
2. Navigate to a menu, for example Settings using the thumb wheel (1) and press it to open a submenu.
3. Navigate to the desired submenu such as Car settings.
4. Navigate to Lock settings and press the thumb wheel to open a new submenu.
5. Navigate to Doors unlock and press the thumb wheel to open a submenu with alternatives that can be selected.
6. Use the thumb wheel to move to the desired choice and press the thumb wheel to put an X in the box.
7. Finish by exiting the menu system either one step at a time with short presses on EXIT (2) or press and hold this button to return to the main menu.

The OK/MENU (2), EXIT (4) and control (3) in the center console can be used in the same way.

MY CAR
When the MY CAR symbol has been selected, the following menu alternatives are displayed.

- My S60
- Support systems
- Settings

My S60

The display shows all of the vehicle’s driver support systems, which can be activated/deactivated here.

  Refer to the optional Volvo Navigation System manual for more information.
Introduction

Air conditioning
The vehicle is equipped with Electronic Climate Control (ECC). The climate control system cools, heats or dehumidifies the air in the passenger compartment.

NOTE
- The air conditioning can be switched off, but to ensure the best possible climate comfort in the passenger compartment and to prevent the windows from misting, it should always be on.
- In warm weather, a small amount of water may accumulate under the car when it has been parked. This water is condensation from the A/C system and is normal.

Sensor location
- The sunlight sensor is located on the top side of the dashboard.
- The temperature sensor for the passenger compartment is located below the climate control panel.
- The outside (ambient) temperature sensor is located on the door mirror.
- The humidity sensor* is located in the interior rearview mirror.

NOTE
- Do not cover or block the sensors with clothing or other objects.

Side windows and moonroof
To ensure that the air conditioning works optimally, the side windows, and the optional moonroof should be closed.

Fog on the inside of the windows
The defroster function should be used to remove fog or mist from the inside of the windows. Keeping the windows clean with a commercially available window washing spray will also help prevent fogging or misting.

Vents in the parcel shelf

NOTE
- The air vents at the rear of the parcel shelf should never be obstructed.

Temporary shut-off of the air conditioning
The air conditioning is momentarily disengaged during full-throttle acceleration or when driving uphill with a trailer. This may result in a temporary increase in cabin temperature.

Ice and snow
Always keep the air intake grille at the base of the windshield free of snow.

Climate system maintenance
Special tools and equipment are required to maintain and carry out repairs on the climate system. Work of this type should only be done by a trained and qualified Volvo service technician.

Refrigerant
Volvo cares about the environment. The air conditioning system in your car contains a CFC-free refrigerant – R134a. This substance will not deplete the ozone layer. The air condi-

* Option/accessory, for more information, see Introduction.
Comfort and driving pleasure

Climate system

The climate system contains 1.8 lbs (820 g) of R134a. The systems uses PAG oil.

Passenger compartment filter
Replace the cabin air filter with a new one at the recommended intervals. Please refer to your Warranty and Service Records Information booklet, or consult a trained and qualified Volvo service technician for these intervals. The filter should be replaced more often when driving under dirty and dusty conditions. The filter cannot be cleaned and therefore should always be replaced with a new one.

NOTE
There are different types of cabin air filters. Ensure that the correct type is installed.

Interior Air Quality System (IAQS)
A multifilter helps reduce gases and particles in the incoming air, thereby reducing the levels of odors and contaminants entering the vehicle. The air quality sensor detects increased levels of contaminants in the outside air. When the air quality sensor detects contaminated outside air, the air intake closes and the air inside the passenger compartment is recirculated, i.e. no outside air enters the vehicle. The filter also cleans recirculated passenger compartment air.

NOTE
Contact your Volvo retailer for IAQS air filter replacement intervals.

Materials used in the cabin
The materials used in the cabin have been developed to help minimize the amount of dust and make the cabin easier to keep clean. All floor mats can be easily removed for cleaning. Use car cleaning products recommended by Volvo. See also the information beginning on page 333.

Menu settings
The default settings for four of the climate system's functions can be changed in the menu system.

- Blower speed in automatic mode.
- Recirculation timer for passenger compartment air.
- Automatic rear window defrosting.
- The optional Interior Air Quality System (IAQS).

The functions can also be returned to factory settings in the menu system. See page 189 for a description of the menu system.

Air distribution

The incoming air is distributed from a number of different vents in the passenger compartment.

Air distribution is fully automatic in AUTO mode.

If desired, air distribution can be controlled manually, see page 202.
05 Comfort and driving pleasure

Climate system

Air vents in the dashboard

- **Open**
- **Closed**
- **Horizontal airflow**
- **Vertical airflow**

Direct the outer air vents toward the side windows to defrost.

Air vents in the door pillars

- **Closed**
- **Open**
- **Horizontal airflow**
- **Vertical airflow**

Direct the outer air vents toward the side windows to defrost.

Direct the vents into the passenger compartment to help maintain the desired temperature in the rear seat.
05 Comfort and driving pleasure

Climate system

Electronic climate control, ECC

1. Temperature control, driver’s side
2. Heated driver's seat*
3. Defroster (maximum effect)
4. Blower
5. Manual air distribution—floor
6. Manual air distribution—dashboard air vents
7. Manual air distribution—defroster
8. Heated rear window and door mirrors, see page 106
9. Heated front passenger's seat*
10. Temperature control, passenger's side
11. Recirculation
12. AUTO
13. A/C on/off

* Option/accessory, for more information, see Introduction.
Climate system controls

Heated front seats*

The current seat temperature is shown in the center console display.

Press the button once for the highest heat level – three indicator lights come on.

Press the button twice for a lower heat level – two indicator lights come on.

Press the button three times for the lowest heat level – one indicator light comes on.

Press the button four times to switch off the heat – no indicator lights come on.

Seat heating will automatically switch off when the engine is switched off.

Heated rear seats*

Heat control for the outboard seating positions is done in the same way as for the front seats.

Blower control

Turn the control clockwise to increase or counterclockwise to decrease the blower speed. If AUTO is selected, blower speed will be regulated automatically and this will override manual adjustment.

NOTE

If the blower is turned off completely, the air conditioning is disengaged, which may result in fogging on the windows.

Air distribution

1. Manual air distribution—defroster
2. Manual air distribution—dashboard air vents
3. Manual air distribution—floor

The figure consists of three buttons. When a button is pressed, the corresponding figure will appear in the display with an arrow indicating which manual air flow has been selected (see the following illustration). See also the air distribution chart on page 202.
Climate system

**NOTE**
Selecting the lowest blower speed may increases the risk of fog forming on the windows.

**Temperature control**
The temperatures on the driver and passenger sides can be set separately. When the vehicle is started, the most recent setting is resumed.

**NOTE**
Heating or cooling cannot be speeded up by selecting a higher/lower temperature than the actual temperature required.

**Auto**
The function automatically regulates cooling, heating, blower speed, recirculation, and air distribution to maintain the chosen temperature. If you select one or more manual functions, the other functions continue to be controlled automatically. The air quality sensor is engaged and all manual settings are switched off when AUTO is pressed. The display shows AUTO CLIMATE.

Blower speed in automatic mode can be set under Climate settings ➔ Automatic blower adjustment. Choose between Low, Normal or High.

**A/C – ON/OFF**
When the indicator light in the button is on, the air conditioning is controlled automatically. This cools/heats and dehumidifies the incoming air. When the indicator light in the button is off, the air conditioning is disengaged. Other functions are still controlled automatically. When maximum defroster is selected, the air conditioning system is set for maximum blower speed and dehumidification.

**Defroster**
This function defrosts/de-ices the windshield and front side windows. The indicator light in the defroster button lights when the function is active.

- Blower speed increases automatically and the air conditioning will switch on (if not already on and if the passenger compartment blower is not turned off) to dehumidify the air in the passenger compartment. Air conditioning can be switched off by pressing the AC button.
- Recirculation will not function while defrost is engaged.
The climate system will return to its previous settings when the defroster function is switched off.

**Recirculation/air quality system**

**Recirculation**

This function can be used to shut out exhaust fumes, smoke, etc., from the passenger compartment. The air in the passenger compartment is then recirculated, i.e., no air from outside the car is taken into the car when this function is activated. The indicator light in the button will illuminate when recirculation is selected.

If the air in the car recirculates for too long, there is a risk of condensation forming on the insides of the windows, especially in winter.

**Timer**

The timer function minimizes the risk of fogging, or stale air when the recirculation function is selected by automatically switching off the function after a certain length of time, depending on the ambient temperature. Activate/deactivate the function under Climate settings ➔ Recirculation timer. See page 189 for a description of the menu system.

**NOTE**

When Defroster is selected, recirculation is always deactivated.

**Interior Air Quality System–IAQS**

This system consists of a multfilter and an air quality sensor. The filter helps remove gases and particles from the incoming air, thereby reducing the amounts of odors and contaminants entering the vehicle. The air quality sensor detects increased levels of contaminants in the outside air. When the air quality sensor detects contaminated outside air, the air intake closes and the air inside the passenger compartment is recirculated, i.e., no outside air enters the vehicle. The filter also cleans recirculated passenger compartment air. When the AUTO button is depressed the air quality sensor is always engaged.

Activate or deactivate this function in Climate settings ➔ Interior air quality system.

**NOTE**

- The air quality sensor should always be engaged in order to obtain the best air in the passenger compartment.
- Recirculation is limited in cold weather to avoid fogging.
- If the insides of the windows start fogging, disengage the air quality sensor. Use the defroster function to increase airflow to the front, side, and rear windows.
### Air distribution table

<table>
<thead>
<tr>
<th>Air distribution</th>
<th>Use</th>
<th>Air distribution</th>
<th>Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>Air to windows. Some air flows from the dashboard air vents.</td>
<td>To remove de-fog/de-ice the front side windows and windshield quickly.</td>

Introduction

Information display and controls

1. OK—press to acknowledge/confirm/erase a message
2. Thumb wheel (used to scroll among the trip computer menus)
3. RESET—resets certain functions

To scroll through trip computer information, move the thumb wheel up or down. Continue turning to return to the starting point.

Functions

NOTE
If a warning message appears while you are using the trip computer, this message must be acknowledged in order to return to the trip computer function. Acknowledge a message by pressing OK.

Average speed
The system calculates the average speed from the last resetting. Reset using RESET.

Current speed in mph (Canadian models only)
This function provides the driver with an instantaneous conversion of the car’s current speed from km/h to mph.

Current speed in km/h (U.S. models only)
This function provides the driver with an instantaneous conversion of the car’s current speed from mph to km/h.

Current fuel consumption (Instantaneous)
Current fuel consumption is calculated every second. The information on the display is updated every few seconds. When the vehicle is stationary, "----" appears on the display.

Average fuel consumption
The average fuel consumption since the last reset. Reset using RESET.

Driving distance on current fuel reserve
This function shows the approximate distance that can be driven on the fuel remaining in the tank. The calculation is based on average fuel consumption during the last 20 miles (30 km) of driving and the amount of fuel remaining in the tank when the reading was taken. When the message ---- miles to empty tank appears in the display, refuel as soon as possible.

NOTE
The actual distance that can be driven on the usable fuel remaining in the tank may be influenced by a change in driving style.

See also page 254 for information on driving economically.

Resetting
1. Select ---- mph average speed or --.- mpg average.
2. Press and hold RESET for approx. 1 second to reset the selected function. If RESET is kept depressed for at 3 three
Trip computer

seconds, Average speed and Average fuel consumption are reset simultaneously.
Active chassis (Four C)
Active chassis, Four-C (Continuously Controlled Chassis Concept), regulates the characteristics of the shock absorbers so that the car's driving characteristics can be adjusted. There are three settings: Comfort, Sport and Advanced.

Comfort
Comfort mode offers a somewhat softer ride and the transmission shifts gears at lower rpm. This mode is particularly suitable for long-distance highway driving. The indicator light in the button will be on when this mode is selected.

Sport
In this mode, the vehicle’s body sway is reduced during cornering and steering response is more immediate. The transmission shifts up at higher rpm for sportier driving. The indicator light in the button will be on to indicate that Sport mode has been selected.

Advanced
In this mode, body sway in curves is minimal and steering response is very direct. Gear shifting is done at high rpm in each gear for dynamic and active driving.

Operation
Chassis settings
Use the buttons in the center console to change setting. The setting in use when the engine is switched off is activated the next time the engine is started.

Speed-dependent steering force*
Steering force increases with the speed of the vehicle to give the driver enhanced sensitivity. At low speed the vehicle is easy to steer in order to facilitate parking, etc.

Steering force can be changed under MY CAR ➔ Car settings ➔ Steering wheel force. Select Low, Medium or High. For a description of the menu system, see page 189.

NOTE
This steering force level menu function cannot be accessed when the vehicle is in motion.
05 Comfort and driving pleasure

Passenger compartment convenience

Storage spaces
Passenger compartment convenience

1. Compartment in door panel
2. Storage pocket on the front edge of the front seat cushions
3. Glove compartment
4. Storage compartment
5. Jacket holder
6. Storage compartment, 12-volt socket and AUX input/USB connector
7. Rear seat cup holders
8. Storage pocket

Jacket holder
The jacket hanger is located on the inboard side of the front passenger’s seat head restraint. It is only intended for hanging light garments.

Tunnel console
1. Storage compartment (for CDs, etc.) under armrest, AUX input/USB connector.
2. Includes cup holder for driver and passenger, 12-volt socket and small storage compartment.

Glove compartment
The owner’s manual and maps can be kept here. There are also holders for pens and fuel cards. The glove compartment can be locked manually with the key blade, see page 67.
Passenger compartment convenience

**Vanity mirror**

The light comes on automatically when the cover is lifted.

**12-volt sockets**

The electrical sockets can be used for 12-volt accessories such as cell phone chargers and coolers. For the socket to supply current, the ignition must be in at least mode I, see page 84.

The maximum current consumption is 10A (120W) if only one of the 12-volt sockets in the passenger compartment is in use. If both the front and rear sockets are used at the same time, the maximum current consumption per socket is 7.5A (90W).

The auxiliary sockets can also be used to power a cigarette lighter. Accessory cigarette lighters and ashtrays can be purchased from your Volvo retailer.

**WARNING**

Always keep the sockets covered when not in use.

**12-volt socket in the trunk***

*Option/accessory, for more information, see Introduction.*
Fold down the cover to access the electrical socket.

**NOTE**

The 12-volt socket in the trunk provides electrical current even when the ignition is switched off. Using the socket while the engine is not running will drain the battery.

INFOTAINMENT
**General information**

The infotainment system consists of radio and media player features and also makes it possible to communicate via a cell phone. The information is displayed on a 7” screen in the center console. Infotainment functions can be controlled from the center console or via the buttons on the steering wheel keypad. On models equipped with the optional navigation system, voice commands can also be used to e.g., set destinations, make calls from a Bluetooth®-connected cell phone, etc.

If the infotainment system was on when the ignition was switched off, the most recently used source (FM1, etc.) will restart the next time the ignition is put in mode I or higher. The driver’s door must also be closed on vehicles with keyless drive*.

The infotainment system can be operated for 15 minutes at a time while the engine is switched off by pressing the On/Off button. While the engine is being started, the infotainment system will be temporarily interrupted and will resume when the engine has started.

---

**NOTE**

To help avoid excessive battery drain, remove the remote key from the ignition slot if the infotainment system is used while the engine is switched off.

---

**Audyssey MultEQ**

The Audyssey MultEQ system has been used to optimize sound quality to help ensure a world-class listening experience.

---

1 Applies only to models with Premium Sound Multimedia.
Infotainment system overview

1 Sockets for external audio sources (AUX and USB)
2 Steering wheel keypad
3 7” display
4 Center console control panel

Basic infotainment functions

1 Infotainment controls in the center console

1 SOUND: press to access the menu for adjusting bass, treble, etc., see page 217 for additional information.
2 VOL: turn to raise or lower the volume level.
3 ON/OFF/MUTE: short press - switch the system ON. Press and hold (until the screen turns black) - switch the system OFF. A short press when the infotainment system is on will mute/unmute the sound. The entire infotainment system, including the navigation* and telephone functions, is switched on/off at the same time by using this button.
4 Mode buttons: select a mode (e.g., RADIO, MEDIA, TEL, etc.) by pressing its button on the center console. The most
recent source in the selected mode (e.g., FM1) will be displayed. The location of these buttons on the center console may vary slightly from model to model.

**OK/MENU**: confirm a menu selection. This leads to the selected mode’s (RADIO, MEDIA) menu view. Arrows at the right of the screen indicate submenus.

**TUNE**: turn to scroll among tracks/folders, radio stations, phone contacts or to navigate among the alternatives shown on the screen.

**EXIT**: short press - go upward in the menu system, cancel a current function, reject an incoming phone call or erase characters that have been entered on the screen. Press and hold - from a mode’s main view to come to the infotainment system’s main view.

**# INFO**: if more information is available than is currently displayed on the screen, press # INFO to display the remaining information.

Keypad (for preset stations, entering letters or numbers, etc).

**FAV**: this button can be used to store a shortcut to a commonly used function in AM/FM/SIRIUS/DISC, etc. See the section "* FAV—storing a shortcut" on page 217 for information on using this button.

**Steering wheel keypad**

The buttons on the right-hand steering wheel keypad can be used in the same way as some of the controls on the center console. There are two versions of the keypad, depending on your vehicle’s specifications.

**Left/right arrow keys**: a short press moves between preset radio stations or tracks on a disc. Press and hold to search within tracks or to tune to the next/previous strong radio station.

**Volume**

**EXIT**: a short press takes you upward in the menu system, cancels a current function, rejects an incoming phone call or erases characters that have been entered on the screen. Press and hold from a mode’s main view to come to the infotainment system’s main view.

Thump wheel: pressing functions in the same way OK/MENU on the center console. Turning the thumb wheel functions in the same way as TUNE on the center console.

**Voice button**: press to voice-activate certain functions on a Bluetooth®-connected cell phone and the navigation system.

**Main view**

From a mode’s normal view, pressing and holding EXIT will display the infotainment system’s main view, which enables you to select a mode.

2 Models with the optional navigation system only. On models without navigation, this button mutes/unmutes the infotainment system.
**MEDIA**: (DISC, USB, etc.)

**TEL**: Bluetooth® hands-free

**MY CAR**: Driving-related settings

**CAM**: Park assist camera*

* Option/accessory, for more information, see Introduction.
Menu navigation

An example of menu navigation in MEDIA mode when a CD is playing
Mode button (in this example, the MEDIA button). The number of buttons varies, depending on your vehicle’s specifications. Each mode has four basic views:

1. Normal view
2. Shortcut view
3. Quick scroll view
4. Menu view

Select a mode by pressing its button (1) (RADIO, MEDIA, TEL, etc.). Navigate using TUNE, OK/MENU or EXIT.

* FAV—storing a shortcut

The * FAV button can be used to store frequently used functions, making it possible to start the stored function by simply pressing * FAV. One favorite (for example, Equalizer) can be programmed for each of the following infotainment system functions:

In RADIO mode
- AM
- FM1/FM2
- SIRIUS1/SIRIUS2*

In MEDIA mode
- DISC
- USB
- iPod
- Bluetooth
- AUX

Favorites can also be stored for MY CAR, CAM* and NAV*. See page 189 for a description of the menu system.

To program a function on the * FAV button:
1. Select a mode (e.g., RADIO, MEDIA, etc.).
2. Press and hold * FAV until the "favorite" menu is displayed.

3. Turn TUNE to scroll through the list of alternatives displayed and press OK/MENU to confirm (store) your choice.

> The next time the infotainment system mode (RADIO, MEDIA, etc.) is selected, a short press on * FAV will start the stored function.

Basic sound settings

Press SOUND to display the basic sound setting menu (Bass, Treble, etc). Continue pressing SOUND or OK/MENU to display the other setting alternatives.

Adjust the setting by turning TUNE and save the new setting by pressing OK/MENU.

Continue pressing SOUND or OK/MENU to display:

- Surround:3 Can be set to On or Off. When switched on, the system will automatically select settings for the best sound quality, which is normally DPLII and □□□□□□ will appear in the display. If the recording was made using Dolby Digital technology, playback will be provided with this setting and □□□□□□ will appear in the display. If Sur-

3 Premium Sound Multimedia only
Introduction

round is switched off, audio will be provided using 3 channel stereo.

- **Bass**: Bass level.
- **Treble**: Treble level.
- **Fader**: Balance between the front and rear speakers.
- **Balance**: Balance between the right and left speakers.
- **DPL II centre level/3 channel centre level**: Volume for the center speaker.
- **DPL II surround level**: Surround level.

**Advanced sound settings**

**Equalizer**

Sound levels for different frequencies can be adjusted separately using this feature.

To do so:

1. Press **OK/MENU** to access Audio settings and select Equalizer

2. Turn **TUNE** to select one of the frequencies and press **OK/MENU**.

3. Turn **TUNE** to adjust the sound setting and confirm the change by pressing **OK/MENU**.

**MENU.** Do the same for the other frequencies.

4. When you have finished making your settings, press **EXIT** to save and return to normal view.

For general information regarding menu navigation, see page 216 and menu overview see page 219.

**Sound stage**

The sound experience can be optimized for the driver’s seat, both front seats or the rear seat. If the front and rear seats are occupied, the sound stage setting **Front seats** is recommended. Select one of the options under Audio settings **Sound stage**.

**Audio volume and automatic volume control**

The infotainment system compensates for disrupting noises in the passenger compartment by increasing the volume according to the speed of the vehicle. The level of sound compensation can be set at low, medium, high or off. Select the level under Audio settings **Volume compensation**.

**External audio source volume**

If an external device such as an MP3 player or an iPod is connected to the AUX socket, the device’s volume may be different than the volume of the internal sound sources such as the disc player or the radio. If the external sound source's volume is too high, the quality of the sound may be impaired. To help prevent this, adjust the input volume of the external audio source:

1. Press **MEDIA** and turn **TUNE** to **AUX**. Press **OK/MENU** or the thumb wheel on the steering wheel keypad.

2. Press **OK/MENU** and turn **TUNE** to **AUX input volume**. Confirm by pressing **OK/MENU**.

3. Turn **TUNE** to adjust the volume.

---

3 Premium Sound Multimedia only
4 Only when Surround is on.
5 Premium Sound Multimedia only
Optimal sound reproduction
The infotainment system is pre-calibrated for optimal sound reproduction using digital signal processing.

This calibration takes into account factors such as the speakers, amplifier, cabin acoustics, the listeners’ seating positions, etc., for each combination of vehicle/infotainment system.

There is also a dynamic calibration that takes into consideration the volume level, radio reception, and the speed of the vehicle.

The settings that are described in this manual, (Bass, Treble, Equalizer etc.) are only intended to enable the user to adapt sound reproduction to his/her personal tastes.

Radio

General functions

1. **RADIO** button for selecting the AM, FM1, FM2, SAT1* or SAT2* wavebands.
2. Keypad (buttons 0-9)
3. Navigate among the menu alternatives in the display by turning **TUNE** or the thumb wheel on the steering wheel keypad.
4. Confirm your selection or access the radio menus by pressing **OK/MENU** or the thumb wheel on the steering wheel keypad.
5. Left/right arrow keys: Press and hold to go to the next/previous strong station, press briefly to tune to a preset station.

Menu navigation

**RADIO** menu selections can be made from the center console or the steering wheel keypad, see page 214 for more information.

Selecting a station (in wavebands AM/FM1/FM2)

Automatic tuning

1. Press **RADIO**, turn **TUNE** to toggle to the desired waveband (AM, FM1, etc.) and press **OK/MENU** or the thumb wheel on the steering wheel keypad.
2. Press (\[ \] keys on the center console control panel or steering wheel keypad to search for the next available station.

List of stations (in wavebands FM1/FM2 only)

The radio automatically compiles a list of the strongest FM stations whose signals are currently being received. This enables you to find stations when driving in areas where radio stations and their frequencies are unfamiliar.

To access this list:

1. Select the desired waveband (FM1 or FM2).
2. Turn **TUNE** slightly in either direction. This displays the list of stations in the area. The currently tuned station will be indicated in the list by magnified text.
3. Turn **TUNE** again in either direction to select a station on the list.
4. Confirm by pressing **OK/MENU** or the thumb wheel on the steering wheel keypad.

**NOTE**

- This list will only display the frequencies of the stations currently being received, not a complete list of all radio frequencies on the currently selected waveband.
- If the signal from the currently tuned station is weak, this may prevent the radio from updating the list of stations. If this occurs, press **#INFO** while the list of stations is displayed to switch to manual tuning mode and select a station. If the list of stations is no longer displayed, turn **TUNE** in either direction to display the list again and press **#INFO**.

The list will disappear from the display after several seconds.

If the station list is no longer displayed, turn **TUNE** in either direction and press **#INFO** on the
keypad on the center console to switch to manual tuning (or to switch back from manual tuning to the "list of stations" function).

**Manual tuning**

By default, the list of stations of the strongest stations in the area will be displayed when you turn **TUNE** (see the preceding section, "List of stations"). While the list of stations is displayed, press **INFO** on the center console keypad to switch to manual tuning, which enables you to select a frequency from the complete list of all radio frequencies available on the currently selected waveband. In other words, in manual tuning mode, turning **TUNE** one step will change from e.g., 93.3 to 93.5, etc.).

To manually tune a station:

1. Press **RADIO**. Turn **TUNE** to scroll to the desired waveband (AM, FM1, etc.) and press **OK/MENU** or the thumb wheel on the steering wheel keypad to confirm.

2. Turn **TUNE** or the thumb wheel to select a frequency.

**NOTE**

The radio is initially set to automatically search for stations in the area in which you are driving (see the preceding section, "List of stations").

However, if you have switched to manual tuning (by pressing **INFO** on the keypad on the center console while the list of stations is displayed), the radio will remain in manual tuning mode the next time it is switched on. To switch back to "list of stations" mode, turn **TUNE** one step (to display the full list of stations) and press **INFO**.

Please note that if you press **INFO** when the list of stations is not displayed, this will activate the **INFO** function.

### Storing preset stations

Ten preset stations can be stored for each waveband (AM, FM1, etc.).

Stored preset stations are selected using the buttons on the keypad on the center console.

**Manually storing preset stations**

1. Tune to a station (see "Selecting a station" on page 222).

2. Press and hold one of the number key buttons.

   > The sound will be muted for several seconds and when it returns, the station has been stored on the number key button used.

A list of preset stations can be displayed. This function can be activated/deactivated in AM/FM mode in **FM menu ➔ Show presets** or in **AM menu ➔ Show presets**

**Scan**

The function automatically searches the current waveband for radio stations. When a station is found, it is played for several seconds before scanning is resumed. While the station is playing it can be stored as a preset in the usual way (see "Manually storing preset stations").

- To start scanning in AM/FM mode, go to **FM menu ➔ Scan** or in **AM menu ➔ Scan**.

Stop station scanning by pressing **EXIT**.

**NOTE**

Storing a station interrupts the SCAN function.

**Radio text**

Some stations transmit information on program content, artists, etc. This information can be shown on the display.
Activate/deactivate in FM mode under Show radio text.

**HD Radio™ reception (U.S. models only)**

**Introduction**

Display when the radio is receiving an HD Radio broadcast

**NOTE**

HD radio volume may fade in and out at times due to coverage limitations.

HD radio is a brand name registered by the Ibiquity digital corporation\(^1\). They are the developer of a broadcasting technology called IBOC or In Band On Channel, which refers to the method of transmitting a digital radio broadcast signal centered on the same frequency as the AM or FM station’s present frequency.

The IBOC system is referred to as a "hybrid" since it is both analogue and digital. During hybrid operation, receivers still continue to receive the analogue (non-digital) signal. HD radio receivers incorporate both modes of reception, where the receiver will automatically switch to the analogue signal if the digital signal cannot be decoded or is lost by the receiver. When you have tuned to an HD Radio station, the **̂** symbol will appear in the infotainment system display. The symbol is "grayed-out" when HD Radio is in standby mode and white when the radio is actively receiving an HD broadcast.

More information about HD radio and IBOC can be found on Ibiquity’s website, [www.hdradio.com](http://www.hdradio.com) and [www.ibiquity.com](http://www.ibiquity.com).

**Benefits of digital broadcasting**

- Better sound (FM sounds near CD quality and AM as analogue FM).
- Some FM frequencies offer a greater number of listening choices through “multicast-ing” (consisting of a frequency’s main channel and any sub-channels that may also be available on that particular frequency. See also the section "Sub-channels" below).
- When receiving a digital signal there is no multipath disturbance or hisses/pops/crackling due to outside influences.

**How HD broadcasting works**

HD Radio works similarly to conventional radio and broadcasts of this type are available in many areas of the United States. However, there are a few key differences:

- Instead of transmitting one analogue signal, stations send out a bundled signal – both analogue and digital.
- An HD radio receiver can receive both digital and analogue broadcasts. Depending on the terrain and location of the vehicle (which will influence the signal strength), the receiver will determine which signal to receive.

**Limitations**

- **Main channel vs. sub-channels (FM only):** The main channel is the only channel that can receive in hybrid mode (both digital and analogue). If a frequency has sub-channels, they are broadcast in digital...

\(^1\) HD Radio (TM) technology is manufactured under license from iBiquity Digital Corp. U.S. and Foreign Patents. HD Radio(TM) and the HD and HD Radio logos are proprietary trademarks of iBiquity Digital Corp.
mode only. The main FM channel will be displayed as, for example, 93.9 WNYC (Volvo uses the symbol ">" to indicate there are sub-channels available). The sub-FM channels will be displayed as 93.9 – 2 WNYC, 93.9 - 3 WNYC, etc.

- **Reception coverage area:** Due to current IBOC transmitter power limitations, the reception coverage area in digital mode is somewhat more limited than the station's analogue coverage area. Please be aware that as with any radio broadcast technology, terrain, time of day, foliage level and building location can have positive or negative effects on radio reception.

- **Analogue to digital/digital to analogue blending:** Analogue to digital blending will occur as the signal strength reaches a preset threshold in the receiver. This will be noticeable in fringe areas (areas with weak reception) and is normal.

### NOTE

There may be a noticeable difference in sound quality when a change from analogue to digital or digital to analogue occurs, such as:

- Volume increase or decrease
- Equalizer settings, i.e., Bass/ Midrange/ Treble cut or boost
- Time alignment (Digital program material in extreme cases can be as much as 8 seconds behind the analogue). This will noticeable as a "stuttering" effect.

**The above items are dependant on the broadcaster’s equipment settings and do not indicate a fault in the vehicle’s radio receiver or antenna systems.**

### Switching HD on or off

The factory setting for HD radio is off. If activated when driving through areas with weak HD signals (fringe areas), you may experience that the radio repeatedly switches between analogue/digital and digital/analogue reception. If this happens, it may be desirable to switch HD off. To do so:

1. Be sure the infotainment system is switched on and in one of the AM or FM modes.
2. Press **OK/MENU** in the center console control panel.
3. Turn **TUNE** and move the marker to HD Radio.
4. Press **OK/MENU** to turn HD off (the X will disappear from the box on the display screen).

This will disable the radio’s capability to receive digital broadcasts but it will continue to function as a conventional (analogue) AM/FM receiver. Please note that when HD is switched off, it will not be possible to tune to sub-channels (see the following section for a more detailed explanation of sub-channels).

Repeat steps 2-4 above to reactivate HD (an X will appear in the box on the display screen). Please note that this will only switch HD on or off for the selected waveband (AM, FM1, etc.).

### Sub-channels

**Example of an HD Radio station with sub-channels**
In many cases, a main HD Radio station (FM wavebands only) will also have sub-channels offering additional types of programming or music.

In such cases, the “-” symbol will be displayed to the left of the frequency number and a number will be displayed to the right of the frequency number indicating that the currently tuned frequency has at least one sub-channel.

Selecting sub-channels
To listen to a station’s sub-channel(s), press and hold the right arrow key on the center console or on the steering wheel keypad for approximately 1 second. To go back to the main channel, press and hold the left arrow key on the center console or on the steering wheel keypad for approximately 1 second. To go to subchannel 2 (if available), press and hold the right arrow key on the center console or on the steering wheel keypad for approximately 1 second.

If you are currently tuned to a frequency’s main channel, pressing and holding the left arrow key for approximately 1 second will tune to the next lower radio frequency.

NOTE
- When the radio has gone into HD mode, it may take several seconds before the “>” symbol (if the current frequency has any sub-channels) is displayed to the left of the frequency. Pressing and holding the arrow keys for approximately 1 second before the main-/sub-channel icon is displayed will cause the radio to tune to the next available radio station, not to the current station’s sub-channels.
- When you are no longer in broadcasting range of the currently tuned sub-channel, No reception will be displayed. The radio will then be muted and it will be necessary to tune to or search for a new radio station.

Sub-channels can also be stored as presets, see page 223 for information on storing stations.

If you press a sub-channel’s preset button, it may take up to 6 seconds before the channel becomes audible. If you press this button while you are out of digital range of the transmitter, No reception will be displayed.

SiriusXM™ satellite radio*

Listening to satellite radio
The SiriusXM™ satellite system consists of a number of high elevation satellites in geosynchronous orbit.

NOTE
- The digital signals from the satellites are line-of-sight, which means that physical obstructions such as bridges, tunnels, etc, may temporarily interfere with signal reception.
- Avoid any obstructions, such as metallic objects transported on roof racks or in a ski box, or other antennas that may impede signals from the SiriusXM™ satellites.

Selecting SiriusXM™ radio mode
1. With the infotainment system switched on, press RADIO.

2. Turn TUNE or the thumb wheel on the steering wheel keypad to scroll to the desired waveband (SAT1 or SAT2) and press OK/MENU or the thumb wheel on the steering wheel keypad.

Activating SiriusXM™ radio
1. Tune to a satellite channel that has no audio, which means that the channel is
unsubscribed and the text Subscription update needed is displayed (see also "Selecting a channel").

2. Call SiriusXM™ at 1-888-539-SIRIUS (7474).

3. If you tune to an unsubscribed channel, the SiriusXM™ ID will be displayed. The SiriusXM™ ID can also be accessed from the menu (press OK/MENU, turn TUNE to scroll to the Advanced settings menu, press OK/MENU, scroll to SIRIUS ID and press OK/MENU to display the number).

4. Updating subscription will be displayed while the subscription is being updated, after which the display will return to the normal view.

**SiriusXM™ ID**
The SiriusXM™ ID (sometimes referred to as the Electronic Serial Number or ESN) is required when contacting the SiriusXM™ Call Center. It is used to activate your account and when making any account transactions.

**Selecting a channel category**
1. Turn TUNE to display a list of channels.
2. Press EXIT.

3. Turn TUNE to scroll through the list of categories and press OK/MENU to make a selection.
   > The channels in the selected category are displayed.

**NOTE**
- The category All is default, which enables you to scroll through the entire list of available satellite channels.
- The channel categories are automatically updated several times a year. This takes approximately two minutes and will interrupt normal broadcasting. A message will be displayed while updating is in progress. Information on channel or feature updates is available at www.siriusxm.com.

**Selecting a channel**
There are three ways of tuning in a channel:
- Using the left and right arrow keys to go to the next channel. Skipped channels (see page 229) will be excluded.
- By turning the TUNE control and selecting a channel from the list
- Through direct channel entry.

**NOTE**
- The numbers of skipped or locked channels will not be displayed.
- If a channel is locked, the access code must be entered before the channel can be selected. See "Unlocking a channel" on page 229.

**Direct channel entry**
The SiriusXM™ satellite channels are in numerical order throughout all of the categories. To access a channel directly:
1. Turn TUNE to access the channel list.
2. Use the keypad buttons to enter the channel's number.
3. Press OK/MENU. The radio will tune to this channel, even if it belongs to a category other than the currently selected one.

**Scanning**
Scan automatically searches through the list of satellite channels. The search will only be carried out in the selected category, see page 223 for more detailed information on the scan function.

**Storing a channel**
A total of 20 satellite channels can be stored; 10 channels each for SAT1 and SAT2, see
Radio

page 223 for detailed information on storing channels.

- A long press on one of the number keys stores the currently tuned channel on that key.
- A short press on a number key while the radio is in SAT1 or SAT2 mode will tune to the preset satellite channel stored on that button, regardless of the currently selected channel category.

Searching for and storing songs

The Song Seek function provides notification when SiriusXM™ is broadcasting the songs selected in song memory. Song memory enables you to store the name of the song for future advance notification when that song is being played.

Song seek

When a satellite radio channel plays one of the songs stored in the song memory while the Song seek feature is activated, the listener will be alerted by a text message and an audible signal.

Press OK/MENU to listen to the song or EXIT to cancel.

To activate/deactivate the song seek function:

1. Press OK/MENU.

2. Turn TUNE to scroll to Song memory and press OK/MENU.

3. Turn TUNE to scroll to Song Seek and press OK/MENU to activate or deactivate the function.

NOTE

When the song has ended, the radio will remain tuned to the channel on which the song was played.

Song memory

Up to ten songs can be saved in the system's memory.

To add the currently playing song to the list:

1. Press OK/MENU.

2. Scroll to Song memory and press OK/MENU.

3. Scroll to Add current song to song memory and press OK/MENU.

If a new song is selected when the memory is full, you will be prompted to delete a song from the list. To do so:

1. Press OK/MENU.

2. Turn TUNE to scroll through the list of songs. Select a song and press OK/MENU to delete it from the list.

Radio text

This text provides information about the song that is currently playing. To turn this feature on or off, press OK/MENU and scroll to Show radio text and press OK/MENU to toggle between on or off.

Advanced SiriusXM™ settings

This menu function enables you to make settings on certain SiriusXM™ satellite radio functions. To access this menu:

1. Press OK/MENU.

2. Scroll to the Advanced settings menu and press OK/MENU.

WARNING

Settings should be made when the vehicle is at a standstill.

The following settings can be made in the satellite menus:

- Channel skip settings can be made
- Channel lock settings can be made
- The channel access code can be displayed or changed (see also "Locking a channel" on page 229)
- Your SiriusXM™ ID can be displayed
- Reset SiriusXM™ settings
Skip options
This function is used to remove a channel from the list of available channels.

Skipping a channel
1. Press OK/MENU.
2. Scroll to the Advanced settings menu.
3. Press OK/MENU to enter the Skip options menu.
4. Press OK/MENU to enter Channel skip list.
5. Press OK/MENU to select All categories or turn TUNE to scroll to a category and press OK/MENU to select it.
6. Press OK/MENU to select Skip all channels in the category or turn TUNE to scroll to a channel and press OK/MENU to select or deselect it. Multiple channels can be selected.

Unskip all channels
This removes all channels from the skip list and makes them available for selection.

Temporary unskip all channels
This function will temporarily unskip all channels and make them available for selection. The channels remain on the skip list and will again be skipped the next time the ignition is switched on.

Channel lock
Access to specific channels can be restricted (locked). A locked channel will not provide audio, song titles, or artist information.

NOTE
All channels are initially unlocked.

Locking a channel
1. Press OK/MENU.
2. Scroll to the Advanced settings menu.
3. Press OK/MENU and turn TUNE to scroll to the Lock options menu and press OK/MENU.
4. Use the keypad in the central control panel to enter the channel access code2 and press OK/MENU.
5. Press OK/MENU to enter the Channel lock list.
6. Press OK/MENU to select All categories or turn TUNE to scroll to a category and press OK/MENU to select it.

Unlocking a channel
A channel’s access code2 is required to unlock a channel.

Unlock all channels
This permanently removes all channels from the locked list and makes them available for selection.

Temporarily unlock all channels
This function will temporarily unlock all channels and make them available for selection. The channels remain on the locked list and will again be locked the next time the ignition is switched on.

CHANGE CODE
This function makes it possible to change the channel access code. The default code is 0000.

To change the code:

---

2 The default code is 0000. If you have changed the code and forgotten it, see the section “If you have forgotten the access code.”
1. Select Change code in the Lock options menu and press OK/MENU.
2. Enter the new code and press OK/MENU.
3. Confirm the new code and press OK/MENU.

If an incorrect code is entered, the text Incorrect code is displayed.

If you have forgotten the access code:
1. Select SIRIUS ID in the Advanced settings menu and press OK/MENU.
2. Press and hold the OK/MENU button for several seconds.
3. The current code will be displayed.

Your Volvo retailer can also provide you with assistance.

SiriusXM™ ID
This function displays the 12-digit SiriusXM™ activation ID.
**Media player**

**CD/DVD** functions

1. Disc slot
2. **MEDIA** button, the most recently used active source will start when **MEDIA** is pressed. Pressing this key from Media mode’s main view will display a shortcut menu.
3. Eject
4. Keypad
5. **TUNE**: Turn to navigate among menu selections/folders/tracks (or turn the thumb wheel on the steering wheel keypad).

**OK/MENU**: Press to confirm your selection or access the menus for the currently selected source (e.g., Disc) or press the thumb wheel on the steering wheel keypad.

6. **Left/right arrow keys**: Fast back/forward and change track or chapter.

The media player supports and can play the following main types of discs and files:
- Purchased CDs (CD Audio)
- Home-burned CDs with audio and/or video files
- Home-burned DVDs with audio and/or video files
- Purchased DVDs

For a list of compatible formats, see page 234.

**Playing a disc**

Press **MEDIA** and scroll to **Disc**. Press **OK/MENU** or the thumb wheel on the steering wheel keypad. If there is a disc in the player, it will begin playing automatically. Otherwise, **Insert disc** will be displayed. Insert the disc into the slot with the text side upward and it will begin playing automatically.

If a disc with audio/video files is inserted, its folder structure will be read by the system. It may take several seconds until the disc begins playing, depending on its quality and the amount of information it contains.

**Disc eject**

For reasons of traffic safety, an ejected disc must be removed within 12 seconds or it will be automatically drawn back into the slot.

**Pause**

When the infotainment system volume is turned off completely or the sound is muted, the player will pause. It will resume playing when the volume is turned up again or if the sound is unmuted. **Pause** is also available via the menu system, select **Play/Pause**.

---

1. The media player can only play DVDs in models equipped with the optional navigation system.
2. DVDs only
Navigating a disc and playing tracks

**CD audio discs**

Turn **TUNE** to access the disc's playlist and to navigate in this list. Press **OK/MENU** to confirm a choice and begin listening. Press **EXIT** to cancel. Press and hold **EXIT** to return to the playlist's root level.

The **/** buttons on the center console or steering wheel keypad can also be used to change tracks.

**Home-burned CD/DVD audio/video files**

Turn **TUNE** to access the disc's playlist and to navigate in this list. Press **OK/MENU** to confirm a choice and begin listening. Use **EXIT** to stop or to go back in the disc's folder structure. Press and hold **EXIT** to return to the playlist's root level.

The **/** buttons on the center console or steering wheel keypad* can also be used to change audio/video files.

The following symbols are used in the display:

- 🎶 - audio files
- 🎥 - video files
- 🗃️ - folders

When a file has been played, the player will continue to play the rest of the files (of the same type) in the current folder. When all of the files in the folder have been played, the player will automatically go to the next folder and play the files in it (unless **Repeat folder** is activated).

The system automatically detects and changes settings if a disc containing only audio or only video files is inserted in the player and will play these files. However, the system will not change settings if a disc containing both audio and video files is inserted and the player will continue to play the current type of file.

**NOTE**

Video images will only be visible when the vehicle is not moving. When the vehicle is traveling faster than approximately 4 mph (6 km/h), **No visual media available while driving** will be displayed. Sound from the film will still be audible and video images will be shown again when the vehicle stops.

**NOTE**

Some copy protected audio files or home-burned audio files may not be read by the player.

**DVD videos**

For information, see page 231.

**Fast forward/reverse**

Press and hold the **/></** buttons to fast forward/reverse. This is done at one speed for audio files but several speeds can be chosen for video files. Press the **/></** buttons several times to increase the speed. Release the button to return to normal viewing speed.

**Scan**

This function plays the first ten seconds of each track/audio file. To start scanning:

1. Press **OK/MENU**.
2. Scroll to **Scan**.
   > The first ten seconds of each track/audio file will be played.
3. Stop scanning by pressing **EXIT**. The current track/audio file will continue playing.

**Random**

This function plays the tracks in random order (shuffle). The random tracks/sound files can be scrolled through in the normal way. To listen to tracks in random order:

1. Press **OK/MENU**,
2. Scroll to Random
3. Press OK/MENU to activate/deactivate the random play function.

Press the ❯❯/⏮ ⤪ buttons on the center console or steering wheel keypad to change tracks/audio files.

Repeat folder
This function makes it possible to play files in a folder repeatedly. When the last file has been played, the first file will begin again. To activate:
1. Press OK/MENU.
2. Turn TUNE to Repeat folder.
3. Press OK/MENU to activate/deactivate the function.

Playing video DVDs
Play
When playing a video DVD, a disc menu may appear on the display, giving you access to extra functions and settings such as choice of subtitle and language, scene selection, etc.

Choosing a chapter
1. Turn TUNE to access the list of chapters and navigate in this list (the film will pause if it is currently playing). Press OK/MENU to choose a chapter and return to the normal view in the display (if a film was playing, it will resume). Press EXIT to access the list of titles.

In the list of titles, turn TUNE to make a selection and press OK/MENU to confirm. This also returns you to the list of chapters. Press EXIT to cancel and return to the normal view (without having made a selection).

It is also possible to change chapters by pressing ❯❯/⏮ on the center console control panel or on the steering wheel keypad.

Advanced settings
Angle
If the DVD supports this function, it is possible to select a camera angle for a certain scene.

This can be done in DVD mode under DVD disc menu ➔ Advanced settings ➔ Angle.

DivX® Video On Demand
The media player can be registered to play DivX VOD files from home-burned discs or USB. The registration code can be found by pressing the MY CAR button, and going to Settings ➔ Information ➔ DivX® VOD code. See page 189 for more information about the menu system.

4 Applies to audio/video files on home-burned discs/USB only.
See also www.divx.com/vod for more information.

**Screen settings**

Screen settings can be made (when the vehicle is not moving) for:

- Brightness
- Contrast

1. Press **OK/MENU** and choose **Image settings** and confirm by pressing **OK/MENU**.
2. Turn **TUNE** to the desired setting and press **OK/MENU**.
3. Change the setting by turning **TUNE** and confirm the change by pressing **OK/MENU**.

Press **OK/MENU** or **EXIT** to return to the screen settings list.

To return to the factory settings, select **Reset**.

**Compatible formats**

The media player can play a number of different types of files and disc formats, and is compatible with the formats listed in the following table.

**Audio formats**
- CD-Audio, mp3, wma, aac, m4a

**Video formats**
- CD-Video, DVD-Video, divx, avi, asf

---

**NOTE**

Dual format (double-sided discs) such as DVD Plus or CD-DVD are thicker than normal discs and may not play in your infotainment system.

If a disc containing both CDDA and MP3 tracks is played, all MP3 tracks will be ignored.
Connecting external devices

Sockets for auxiliary devices in the storage compartment between the front seats

An auxiliary device, such as an iPod® or MP3 player can be connected to the infotainment system via one of the sockets in the center console storage compartment. A device connected to the USB socket can be operated using the vehicle’s infotainment system controls.

An iPod® or an MP3 player with rechargeable batteries will also be charged if the device is connected to the USB socket (if the vehicle’s ignition is on or if the engine is running).

To connect a device:

1. Press MEDIA and turn TUNE to select the desired source (iPod, USB or AUX). Press OK/MENU.
   > For example, if a USB device has been selected, the text Connect USB will be displayed.

2. Connect the device to one of the sockets in the center console storage compartment (see the illustration).

   The text Reading USB will be displayed while the system reads the device’s folders. This may take a short time, depending on the folder structure and the number of files.

   When this information has been loaded, track information will be displayed and a track can be selected.

NOTE
- The system supports a number of iPod® models produced in 2005 or later.
- In order to help avoid damage to the USB socket, it will be switched off if there is a short circuit or if the connected device uses too much current (which can happen if the device does not comply with the USB standard). The USB socket will reactivate the next time the ignition is switched on if the problem no longer exists. If the problem persists, contact a trained and authorized Volvo service technician.

Media menu selections can be made from the center console or the steering wheel keypad, see page 214 for more information.

Navigating and playing tracks

Turn TUNE to access the device’s playlist and to navigate in this list. Press OK/MENU to either select a sub-folder or confirm a choice and begin playback. Press EXIT to cancel and exit the playlist or to go back in the folder structure. Press and hold EXIT to go to the highest level in the playlist.

1 USB and iPod® only
06 Infotainment

AUX/USB sockets

The \( \text{\textgreater{} or \textless{}} \) buttons on the center console or steering wheel keypad can also be used to change tracks/files.

The following symbols are used in the display:

- \( \text{\textbullet{}} \) - audio files
- \( \text{\textbullet{}} \) - video files
- \( \text{\textbullet{}} \) - folders

When a file has been played, the player will continue to play the rest of the files (of the same type) in the current folder. When all of the files in the folder have been played, the player will automatically go to the next folder\(^1\) (unless Repeat folder is activated) and play the files in it.

The system automatically detects and changes settings if a device containing only audio or only video files is connected to the USB socket and will play these files. However, the system will not change settings if the device contains both audio and video files and will continue to play the current type of file.

Fast forward/reverse\(^1\)
For information, see page 232.

Scan\(^1\)
For information, see page 232.

Random\(^1\)
For information, see page 232.

Search\(^1\)
The keypad in the center console can be used to search for a file in the currently selected folder.

Start the search by either turning TUNE (to access the folders) or by pressing one of the character keys to enter a letter/number. Possible search results will be displayed as characters are entered.

Play the file by pressing OK/MENU.

Repeat\(^2\)
This function makes it possible to play files in a folder repeatedly. When the last file has been played, the first file will begin again. For information, see page 233.

Pause
When the infotainment system volume is turned off completely or the sound is muted, the player will pause. It will resume playing when the volume is turned up again or if the sound is unmuted. Pause is also available via the menu system, select Play/Pause.

External sound sources

USB flash drive
To simplify the use of a USB flash drive, it is advisable to only store music files on the drive. It will take considerably longer for the system to index the files on the drive if it contains anything other than compatible music files.

NOTE

- The system supports removable media that uses the USB 2.0 standard and the FAT32 file system. It can index up to 1,000 folders and a maximum of 254 sub-folders/files for each folder. However, the highest folder level can support up to 1,000 sub-folders/files.
- When using a longer type of USB device, connecting it with a USB adapter cable will help reduce mechanical wear on the USB socket and on the device.

USB hub
A USB hub can be connected to the USB socket, making it possible to connect several USB devices at the same time. To select one of the devices, go to the menu USB menu ➔ Select USB device

---

\(^1\) USB and iPod\(^6\) only
\(^2\) USB only
MP3 player
Many MP3 players have a file indexing system that is not supported by the vehicle’s infotainment system. In order to use an MP3 player, the system must be set to **USB Removable device/Mass Storage Device**.

**iPod**
An iPod® receives current and its battery is charged through the USB cable.
The system will only play audio files from an iPod®.

**NOTE**
When an iPod® is used as a sound source, the vehicle’s infotainment system has a menu structure similar to the one in the iPod®. See the iPod’s manual for detailed information.

**Compatible file formats via the USB socket**
The following audio and video files are supported by the system when playing a device connected to the USB socket.

<table>
<thead>
<tr>
<th>Audio formats</th>
<th>mp3, wma, aac, m4a</th>
</tr>
</thead>
<tbody>
<tr>
<td>Video formats</td>
<td>divx, avi, asf</td>
</tr>
</tbody>
</table>
**Introduction**

The vehicle’s media player is equipped with Bluetooth® and can play streaming audio files from a Bluetooth® device such as a cell phone or mp3 player. Navigation and control of the device can be done through the vehicle’s center console control panel or the steering wheel keypad. On certain external devices, it is also possible to change tracks from the device.

**NOTE**

Any Bluetooth cell phones used must support Audio/Video Remote Control Profile (AVRCP) and Advanced Audio Distribution Profile (A2DP). The phone must use AVRCP version 1.3 and A2DP 1.2. If older versions of these standards are used, certain features (e.g., scan or random) may not function.

Not all cell phones are fully compatible with the vehicle’s Bluetooth system. A list of compatible phones is available at your Volvo retailer or at www.volvocars.us.

**Menu navigation**

Choices can be made in the Bluetooth menus from the center console control panel or the steering wheel keypad. For additional information about navigating the various menus, see page 214.

The vehicle’s media player can only play audio files through the Bluetooth® function.

**Overview**

1. **VOL:** Volume control
2. **MEDIA** button, the most recently used active source will start when MEDIA is pressed. Pressing this key from Media mode’s main view will display a shortcut menu.
3. **TUNE:** Turn to navigate among menu alternatives and folders shown in the display.
4. **OK/MENU:** Press to confirm your selection or access the menus.
5. **EXIT:** Press to go back in the menu structure or cancel a function.
6. **Left/right arrow keys:** Short press: change tracks. Long press: fast forward/reverse within a track. The arrow keys on the steering wheel keypad can be used in the same way.

**Pairing and connecting an external device**

Before an external device can be connected, it must be paired to the infotainment system. The procedure for connecting an external device varies, depending whether or not the device has previously been paired to the infotainment system. A maximum of 10 external devices can be paired and each device only needs to be paired once. To pair a device, see page 241.

**Automatic connection**

When the Bluetooth® function is active and the most recently used device is within range, it is automatically connected. When the infotainment system searches for the most recently used device, its name is shown in the display. To connect another paired device, press EXIT. See the following section for information about switching to another device.
Switching to another device
It is possible to switch among paired Bluetooth® devices that are in the vehicle. To do so:

1. Press MEDIA, scroll to Bluetooth and press the thumb wheel on the steering wheel keypad or OK/MENU.
2. Be sure the Bluetooth® device is discoverable (refer to its user manual if necessary).
3. Press the thumb wheel or OK/MENU.
4. Turn the thumb wheel or TUNE to Change device and confirm by pressing the thumb wheel or OK/MENU.
   > After several seconds, the names of any paired external devices will be displayed.
5. Scroll to the device to be connected and press the thumb wheel or OK/MENU.
   > The device will be connected.

Audio files can now be selected using the ▶/◀ buttons in the center console or on the steering wheel keypad.

Disconnecting an external device
The external device is automatically disconnected from the infotainment system if it is moved out of range.

Removing a paired device
1. In Bluetooth mode, press OK/MENU.
2. Scroll to Remove Bluetooth device and press the thumb wheel or OK/MENU.
3. Scroll to the device to be removed by turning the thumb wheel or TUNE and confirm by pressing the thumb wheel or OK/MENU.
   > A question asking if you would like to remove the device will be displayed.
4. Press the thumb wheel or OK/MENU to confirm or EXIT to cancel.

Random
This function plays the audio files on the external device in random order (shuffle). This function can be activated/deactivated under: Bluetooth menu ➔ Random

Press the ▶/◀ buttons on the center console or steering wheel keypad to change tracks.

Scanning audio files on an external device
This function plays the first ten seconds of each audio file. This function can be activated/deactivated under: Bluetooth menu ➔ Scan. Scanning can be canceled by pressing EXIT.

Bluetooth® version information
This feature offers information about the Bluetooth® version installed in the vehicle’s infotainment system. This information can be found under Bluetooth menu ➔ Bluetooth software version in car.

---

1 Function is not supported on all cell phones.
**Bluetooth® hands-free connection**

**Introduction**
This feature makes it possible to set up a wireless connection between a Bluetooth®-enabled cell phone or other device and the vehicle’s infotainment system. This enables the infotainment system to function as a hands-free connection and allows you to remote-control a number of the phone’s functions. The microphone used by this system is located near the driver’s side sun visor (2). The buttons and other controls on the cell phone can always be used regardless of whether or not the phone is connected to the hands-free system.

**NOTE**
Not all cell phones are fully compatible with the hands-free system. A list of compatible phones is available at your Volvo retailer or at www.volvocars.us

**WARNING**
Never use the hands-free feature or any other device in your vehicle in a way that distracts you from the task of driving safely. Distraction can lead to a serious accident.

**Compliance**

**FCC/IC common sentence**
This device complies with Part 15 of FCC Rules and RSS-Gen of IC Rules. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of this device.

USA: FCC ID A269ZUA130
FCC WARNING
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

**IC RSS-Gen**
This equipment complies with FCC/IC radiation exposure limits set forth for uncontrolled equipment and meets the FCC radio frequency (RF) Exposure Guidelines in Supplement C to OET65 and RSS-102 of the IC radio frequency (RF) Exposure rules. This equipment has very low levels of RF energy that it deemed to comply without maximum permissive exposure evaluation (MPE). But it is desirable that it should be installed and operated with at least 8 in. (20 cm) and more between the radiator and person’s body (excluding extremities: hands, wrists, feet and ankles).

Canada: IC 700BIAM2101

**Menu navigation**
**TEL** menu selections can be made from the center console or the steering wheel keypad. For additional information about navigating the various menus, see page 214.

**System overview**
1. Cell phone
2. Location of the microphone
3. Steering wheel keypad
4. Center console control panel and display
Bluetooth® functions in the center console control panel

Control panel in the center console.

1 Keypad containing letters and numbers for dialing numbers, adding phone book entries, etc.

2 TEL: Press this button to activate/deactivate the Bluetooth® function. If TEL is already active, pressing this button again will display a shortcut menu with commonly used functions.

3 TUNE: From TEL mode’s normal view, turn clockwise to display the phone book or counterclockwise for the phone list. It can also be used for navigating in displayed menus. The thumb wheel in the steering wheel keypad can be used in the same way.

4 OK/MENU: Press to answer an incoming call, confirm your selection or access the phone menus. Incoming calls can also be answered by pressing the thumb wheel on the steering wheel keypad.

5 EXIT: Press to end or reject calls, erase characters that have been entered, end an ongoing function and goes back in the menus. This button on the steering wheel keypad can also be used in the same way.

Getting started
Use the controls on the steering wheel keypad and in the center console to access, navigate and make selections in the hands-free system’s menus.

Activation
A short press on the TEL button in the center console activates the Bluetooth® hands-free system. If the system is already activated when the button is pressed, a shortcut menu will be displayed. The symbol at the upper right of the display indicates that the hands-free system is active.

Pairing (connecting) external Bluetooth® devices
A maximum of 10 cell phones or other devices can be paired with the hands-free system. Pairing only needs to be done once for each phone. After pairing, the cell phone no longer needs to be in sight or discoverable.

Two Bluetooth® devices (e.g., a phone and an iPod®) can be active at the same. However, two phones cannot be used at the same time to make calls.

There are two ways of pairing a cell phone to the hands-free system for the first time:

Method 1: Search for the external device using the infotainment menus

1. Activate the cell phone’s Bluetooth® function to make it discoverable (refer to the phone’s user manual if necessary) or go to www.volvocars.com
2. Press TEL.
   > The infotainment system will search for previously paired devices.
3. Press the thumb wheel on the steering wheel keypad or OK/MENU and select Add phone.¹

¹ Select Change phone if the cell phone or device has already been paired with the infotainment system. If several phones or devices have already been paired, their names will also be displayed. Scroll to the device to be connected and press the thumb wheel on the steering wheel keypad or OK/MENU.
4. With the cell phone in discoverable mode, press **OK/MENU**.
   > The infotainment system will search for cell phones or devices that are in range, which takes approximately 30 seconds. Any phones detected will be displayed using their Bluetooth® names. The hands-free system’s Bluetooth® name will appear in the cell phone’s display as **My Volvo Car**.
5. Turn the thumb wheel or **TUNE** to select one of the cell phones shown in the center console display and press the thumb wheel or **OK/MENU**.
6. Using the cell phone’s keypad, enter the digits (PIN code) shown in the center console display and press the button on the cell phone used to confirm a choice.

The external device is now paired and can be controlled from the infotainment system.

If the connection failed: Press **EXIT** and connect with method 2 below.

**Method 2:** Search for the vehicle using the external device’s Bluetooth® function.

1. Press **TEL**. If a phone or external device is already connected, disconnect it.
   > The Bluetooth® function will search for previously paired devices.
2. Make the vehicle discoverable by pressing the thumb wheel or **OK/MENU** and selecting **Phone settings ➔ Discoverable**.
3. Search for the vehicle using the phone or external device’s Bluetooth® function. Refer to its user manual if necessary.
4. Select **My Volvo Car** on the phone or external device’s screen and follow the directions provided.
5. Enter a PIN code of your choice in the external device and press its button to pair the device. When prompted, enter the same PIN code in the vehicle using the center console keypad.
6. Pair **My Volvo Car** from the external device.

When the external device has been paired, its Bluetooth® name appear in the center console display. This device can now be controlled from the infotainment system.

**Connect automatically**
When the hands-free system is active and the most recently connected cell phone is within range, it will be connected automatically. If this phone is not within range, the hands-free system will attempt to connect one of the other paired cell phones. When the infotainment system searches for the most recently connected phone, its name appears in the display.

**Connect manually**
To connect a phone other than the one that was most recently connected or to switch between cell phones that are already paired with the hands-free system, go to **Phone menu ➔ Change phone**.

**Changing phones or devices**
More than one device can be used in the vehicle as long as this device has been paired. To do so, see page 241.

**Changing devices:**

1. Check that the external device is discoverable.
2. Press **TEL** and select **Change phone**.
   > The infotainment system will search for previously paired devices. Those that are detected will be displayed on the screen.
3. Select the desired device by turning the thumb wheel or **TUNE** and confirm by pressing the thumb wheel or **OK/MENU**.
   > The device will be connected.

**Making a call**

1. Ensure that 📞 is shown at the top of the center console display and that the hands-free function is in telephone mode.
2. Dial the desired phone number using the center console keypad or use the speed dial function (see page 247). In normal view (see page 213 for information about the various display views), it is also possible to turn TUNE clockwise to access the phone book and then counter-clockwise for the call list. See page 247 for more information about the phone book.

3. Press the thumb wheel or OK/MENU. End or reject a call by pressing EXIT.

Disconnecting the cell phone
The cell phone is automatically disconnected from the infotainment system if it is moved out of range.

The cell phone can be manually disconnected from the hands-free system by pressing and holding TEL or in phone mode, going to Phone menu ➔ Disconnect phone. See also page 244 for more information about connections.

The hands-free system is also deactivated when the ignition is switched off (or if the driver’s door is opened).

When the cell phone is disconnected from the hands-free system, a call in progress can be continued using the cell phone’s own speaker and microphone. Even if the cell phone has been disconnected manually, some phones may reconnect automatically, for example when a new call is initiated.

Removing a paired device
A paired phone or device can be removed from the list. To do so:
1. Press TEL.
2. Select Phone menu ➔ Remove Bluetooth device.

Handling calls

Incoming calls
- Press OK/MENU (or the thumb wheel on the steering wheel keypad) to answer a call, even if the infotainment system is currently in another mode (e.g., RADIO or MEDIA).

Press EXIT to reject a call.

Auto answer
This function means that incoming calls will be answered automatically. Activate or deactivate the function in the menu system under Phone menu ➔ Call options ➔ Auto answer.

Call settings
While a call is in progress, press OK/MENU or the thumb wheel on the steering wheel keypad to access the following functions:
- Mute: mute the infotainment system’s microphone.
- Mobile phone: transfer the call from hands-free to the cell phone. On certain cell phones, the connection will be broken, which is normal. The hands-free function will ask if you would like to reconnect.
- Dial number: dial a third party during an ongoing call using the keypad (the current call will be put on hold).

Call lists
Call lists are copied to the hands-free function each time a cell phone is connected and the lists are updated while the phone is connected. In normal view, turn TUNE counter-clockwise to see the All calls list.

In phone mode, the various call lists can be displayed in Phone menu ➔ Call lists:
- All calls
- Missed calls
- Answered calls
- Dialed calls (certain cell phones show this list in reverse order)
- Call duration
Bluetooth® hands-free connection

If no number has been stored, this menu can be accessed by pressing and holding 1.

Voice mail
In normal view, a speed dial number for voice mail can be programmed and accessed by pressing and holding 1.

The number for voice mail can be changed in phone mode in Phone menu ➔ Call options ➔ Voicemail number ➔ Change number.

Sound settings

Call volume
Call volume can be only be adjusted during a call. Use the buttons in the steering wheel keypad or the infotainment system’s VOL control.

Infotainment system volume
If no phone call is in progress, volume for the infotainment system can be adjusted in the normal way with the infotainment system’s VOL control or from the steering wheel keypad.

Infotainment system sound can be automatically muted when a phone call is received in Phone menu ➔ Phone settings ➔ Sounds and volume ➔ Mute radio/media.

Ringing volume
In phone mode, go to Phone menu ➔ Phone settings ➔ Sounds and volume ➔ Ring volume and adjust the volume by turning VOL. Save the setting by pressing EXIT.

Ringing tones
The hands-free system’s integrated ringing tones can be selected in Phone menu ➔ Phone settings ➔ Sounds and volume ➔ Ring signals ➔ Ring signal 1, etc.

Phone book
The hands-free system uses two phone books (one with the cell phone’s list of contacts and one with contacts saved directly in the infotainment system), which are combined to form one phone book.

- The infotainment system downloads the phone book from a connected cell phone. This phone book will only be displayed when this cell phone is connected to the hands-free system.
- The infotainment system also has an integrated phone book made up of contacts that have been saved in the system, regardless of which cell phone is currently connected when the contact is saved. These contacts will be displayed regardless of the cell phone that is connected. If a contact has been saved in the infotainment system, the symbol will be displayed next to it.

Phone book

If you prefer to use the connected cell phone’s ring tone\(^2\), go to Phone menu ➔ Phone settings ➔ Sounds and volume ➔ Ring signals ➔ Mobile phone ring signal.

\(^2\) Not supported by all cell phones.
NOTE

Changes made from the infotainment system to a contact in the cell phone’s phone book will result in a new contact being added to the infotainment system’s phone book. However, this contact will not be saved in the cell phone’s phone book. The infotainment system’s display will show duplicate contacts with different icons.

Please also note that if a speed dial number is saved or if a contact’s information is edited, this will result in a new contact in the infotainment system’s phone book.

The symbol must be displayed before the phone book can be used and the hands-free function must be in phone mode.

The infotainment system saves a copy of each paired cell phone’s phone book. This phone book can be copied each time the phone is connected.

- Activate/deactivate this function in phone mode in Phone menu ➔ Phone settings ➔ Download phone book.

If the phone book contains information about someone who is trying to call you, this information will be shown in the display.

Contact shortcuts

A quick way of searching the phone book for contacts in normal view is to turn TUNE clockwise to access the phone book and then counter-clockwise to select a contact from the list. Press OK/MENU to call.

Each name in the phone book has a default phone number. If the # symbol is displayed to the right of it, this indicates that there are additional phone numbers for this contact. To use a phone number other than the default one, press the button on the center console control panel. Turn TUNE to select a different phone number and press OK/MENU to call.

It is also possible to search for a contact by using the center console keypad to enter the first letter(s) of the contact’s name (see also the following table "Buttons in the center console" for each button’s function).

The list of contacts can also be accessed from normal view by pressing and holding the button on the center console keypad with the first letter of the contact’s name. For example, pressing and holding button 6 would provide direct access to the section of the list with contacts whose names begin with M.

Searching for contacts

1. List of characters
2. Switch between character entry modes (see the following table)
3. Phone book (list of contacts)

To search for or edit a contact in phone mode, go to Phone menu ➔ Phone book ➔ Search.

1. Turn TUNE to the desired letter and press OK/MENU to confirm. The number/letter keys on the center console can also be used.
2. Continue to the next letter, etc. The results of the search will be displayed in the phone book (3).

3. To switch from letter entry mode to the entry mode for numbers or special characters, or to go to the phone book, turn TUNE to one of the selections (see the explanation in the following table) in the list for switching character entry mode (2) and press OK/MENU.

Character entry modes

| 123/ABC | Toggle between letters and numbers by pressing OK/MENU. |
| More    | Switch to special characters by pressing OK/MENU. |
| =>      | This leads to the phone book (3). Turn TUNE to select a contact and press OK/MENU to display the contact’s information. |

Press EXIT briefly to erase a single character. Press and hold EXIT to erase all of the characters that have been entered.

If a number button on the center console is pressed while the text wheel is displayed, a list of characters (1) will be displayed. Briefly press the button once to enter its first letter, twice to enter the second letter, etc. Continue to press the button to display other characters. Continue with the next character, etc.

To enter a number, press and hold the button.

Adding a new contact

1. Switch between character entry modes (see the following table)
2. Character entry field

New contacts can be added in phone mode in Phone menu ➔ Phone book ➔ New contact.

1. When Name is highlighted, press OK/MENU to go to the character entry mode (see the illustration).
2. Turn TUNE to the desired letter and press OK/MENU to confirm. The number/letter keys on the center console can also be used.
3. Continue to the next letter, etc. The name entered will be displayed in the character entry field (2).

4. To switch from letter entry mode to the entry mode for numbers or special characters, or to toggle between upper and lower case letters, etc., turn TUNE to one of the selections (see the explanation in the following table) in the list (1) and press OK/MENU.

When you have finished entering the name, select OK in the list in the display (1) and press OK/MENU. Continue by entering the phone number in the same way.

When you have entered the phone number, press OK/MENU and select a tag for the number (Mobile phone, Home, Work or General). Press OK/MENU to confirm.

When all of the contact’s information has been entered, select Save contact in the menu to save.

| 123/ABC | Toggle between letters and numbers by pressing OK/MENU. |
| More | Switch to special characters by pressing OK/MENU. |
| OK | Save and return to Add contact by pressing OK/MENU. |

Speed dial
Speed dial numbers can be added in phone mode in Phone menu ➔ Phone book ➔ Speed dial.

To use speed dial to make a call in phone mode, press a button on the center console keypad followed by OK/MENU. If a contact has not been saved on the speed dial number used, you will be prompted to save a contact on the number selected.

Accept vCards
vCards from other cell phones can be added to the infotainment system’s phone book. To enable this feature, put the infotainment system in discoverable mode for Bluetooth®. The feature is activated in Phone menu ➔ Phone book ➔ Receive vCard.

Memory status
In phone mode, the memory status of the infotainment system’s phone book and the connected cell phone’s phone book can be seen in Phone menu ➔ Phone book ➔ Memory status.

Clearing the phone book
In phone mode, all entries in the infotainment system’s phone book can be cleared in Phone menu ➔ Phone book ➔ Clear phone book.

NOTE
Clearing the entries in the infotainment system’s phone book does not delete entries in the cell phone’s phone book.

Bluetooth® version information
For information about the Bluetooth® version installed in the vehicle, go to Phone menu ➔ Phone settings ➔ Bluetooth software version in car.
Introduction
The infotainment system's voice control feature enables the driver to voice-activate certain functions in a Bluetooth-connected cell phone or the navigation system.

NOTE
- The information in this section applies to using voice commands to operate a Bluetooth-connected cell phone. See also the section "Bluetooth hands-free connection" beginning on page 240 for detailed information about using a cell phone with the vehicle's infotainment system.
- The navigation system has a separate user's guide containing information about voice commands for operating that system.

Voice commands offer convenience and help avoid distractions so that you can concentrate on driving and focus your attention on road and traffic conditions.

WARNING
As the driver, you have full responsibility for operating the vehicle safely and adhering to all applicable traffic regulations.

The voice control feature provides access to a number of functions in the Bluetooth hands-free and navigation systems while allowing you to keep your hands on the steering wheel. Input is in dialogue form using spoken commands from the user and verbal prompts from the system. Voice control uses the same microphone as the Bluetooth hands-free system (see the illustration on page 240) and system prompts are provided through the infotainment system's front speakers.

Languages

List of languages.
Voice control is not available for all languages. The available languages are indicated by the icon. The language can be changed in the MY CAR menu system under MY CAR ➔ Settings ➔ System options ➔ Language.

1 Available in vehicles equipped with the optional Volvo Navigation System only
Getting started

Voice control button (1) on the steering wheel.

Activating the system
Before any phone voice commands can be used, a Bluetooth®-enabled cell phone must be paired with the infotainment system. If a phone command is given, the system will inform you if there is no cell phone paired. See page 241 for information on pairing a cell phone.

Press the voice control button (1 in the illustration) to activate the system and initiate a command dialogue. The system will display commonly used commands on the screen when the button has been pressed.

While using the voice control system, keep the following points in mind:

- When giving commands, speak at your usual speed and in a normal tone of voice after the tone
- The vehicle’s doors, windows and moonroof should be closed when using the voice control system
- Avoid background noises in the cabin when using the system

Voice control commands can be cancelled by:
- Saying "cancel"
- Not speaking
- Pressing and holding the voice control button
- Pressing EXIT or one of the mode buttons (RADIO, MEDIA, etc.).

NOTE
If you are uncertain of the commands that you can use, saying "help" will prompt the system to provide a number of commands that can be used in a specific situation.

NOTE
The tutorial feature can only be started when the vehicle is parked and the parking brake is applied.

- By pressing the voice control button and saying "Voice tutorial."
- By pressing MY CAR and going to Settings ➔ Voice settings ➔ Voice tutorial. Press OK/MENU to begin the tutorial lesson.

The tutorial is divided into three lessons, which take a total of approximately 5 minutes to complete.

By default, the system will begin with the first lesson. To skip to the next lesson, press the voice control button and say "next." Go back to a previous lesson by saying "previous."

Press and hold the voice control button to exit the tutorial.
Cell phone voice control

Voice output volume
Press MY CAR and go to Settings ➔ Voice settings ➔ Voice output volume. Press OK/ MENU and turn TUNE to raise or lower the volume. Press EXIT to save the change and exit the menu.

Using voice commands
The driver initiates a voice command dialogue by pressing the voice control button (see the illustration on page 249).

When a dialogue has been initiated, commonly used commands will be shown in the display. Grayed-out texts or texts in parentheses are not part of the spoken command.

Once you become familiar with the system, you can speed up the command dialogue by briefly pressing the voice control button to skip prompts from the system.

Commands can be given in several ways.
For example, the command "Phone call contact" can be spoken as:

- "Phone > Call contact" — say "Phone," wait for a system response, and then continue by saying "Call contact."
- "Phone call contact" — give the entire command at one time

The following is a list of features that can be voice-controlled with a Bluetooth®-connected cell phone.

Shortcuts
Shortcut commands for using the phone can be found in the MY CAR menu system, under Settings ➔ Voice settings ➔ Voice command list ➔ Phone commands and General commands. See page 189 for more information on the menu system.

Dialing a number
The system understands the digits zero to nine. These numbers can be spoken individually, in groups of several digits at a time, or the entire number can be given at once. Numbers above nine will not be recognized.

The following is an example of a voice command dialogue. The system’s response may vary depending on the situation.

The user initiates the dialogue by saying:
Phone > dial number
or
Phone dial number
System response
Number please

User action
Begin saying the digits in the phone number. If you say several digits and pause, the system will repeat them and prompt you by saying "Continue."

Continue saying the digits. When you have finished, complete the command by saying "Dial."

- You can also change the number by using the commands "Correction" (which deletes the last group of digits spoken) or "Delete" (which will erase the entire phone number).

Dialing from a call list
The dialogue below enables you to make a call from one of your cell phone’s call lists.

The user initiates the dialogue by saying:
Phone > dial from call list
or
Phone dial from call list
Continue by responding to the system’s prompts.

Calling a contact
The dialogue below enables you to call the pre-defined contacts in your cell phone. See the phone’s user’s guide if necessary.
The user initiates the dialogue by saying:
Phone > call contact

or

Phone call contact

Continue by responding to the system’s prompts.

When calling contacts, keep the following in mind:

• If there are several contacts with similar names, they will be presented in the display in numbered lines and the system will prompt you to pick a line number.

• If there are more lines in the list than can be displayed at one time, saying "Down" will enable you to scroll downward in the list (and saying "up" will take you back up through the list).

Dialing voice mail
The dialogue below enables you to call your voice mail to check any messages that you may have received. Your voice mail phone number must be registered in the Bluetooth® function, see page 244.

The user initiates the dialogue by saying:
Phone > dial voice mail

or

Phone dial voice mail

Continue by responding to the system’s prompts.

DURING YOUR TRIP
General information

Economical driving conserves natural resources
Better driving economy may be obtained by thinking ahead, avoiding rapid starts and stops and adjusting the speed of your vehicle to immediate traffic conditions.

Observe the following rules:
- Bring the engine to normal operating temperature as soon as possible by driving with a light foot on the accelerator pedal for the first few minutes of operation. A cold engine uses more fuel and is subject to increased wear.
- Whenever possible, avoid using the vehicle for driving short distances. This does not allow the engine to reach normal operating temperature.
- Drive carefully and avoid rapid acceleration and hard braking.
- Use the transmission’s Drive (D) position as often as possible and avoid using kick-down.
- Using the transmission’s Sport mode¹ may increase fuel consumption somewhat. Use the transmission’s Drive (D) position as often as possible. See page 119 for additional information about Sport mode.
- Do not exceed posted speed limits.
- Avoid carrying unnecessary items (extra load) in the vehicle.
- Maintain correct tire pressure. Check tire pressure regularly (when tires are cold).
- Remove snow tires when threat of snow or ice has ended.
- Note that roof racks, ski racks, etc, increase air resistance and also fuel consumption.
- At highway driving speeds, fuel consumption will be lower with the air conditioning on and the windows closed than with the air conditioning off and the windows open.
- Using the onboard trip computer’s fuel consumption modes can help you learn how to drive more economically.

Other factors that decrease gas mileage are:
- Dirty air cleaner
- Dirty engine oil and clogged oil filter
- Dragging brakes
- Incorrect front end alignment

¹ Certain models only.

WARNING

Driving with the trunk open: Driving with the trunk open could lead to poisonous exhaust gases entering the passenger compartment. If the trunk must be kept open for any reason, proceed as follows:
- Close the windows
- Set the ventilation system control to air flow to floor, windshield and side windows and the blower control to its highest setting.

Weight distribution affects handling
At the specified curb weight your vehicle has a tendency to understeer, which means that the steering wheel has to be turned more than might seem appropriate for the curvature of a bend. This ensures good stability and reduces the risk of rear wheel skid. Remember that these properties can alter with the vehicle load. The heavier the load in the trunk, the less the tendency to understeer.

Handling, roadholding
Vehicle load, tire design and inflation pressure all affect vehicle handling. Therefore, check that the tires are inflated to the recommended pressure according to the vehicle load. See the "Tire pressure" section. Loads should be dis-
tributed so that capacity weight or maximum permissible axle loads are not exceeded.

**Driving through water**
- The vehicle can be driven through water up to a depth of approximately 10 in. (25 cm), at a maximum speed of 6 mph (10 km/h).
- Take particular care when driving through flowing water.
- Clean the electrical connections for trailer wiring after driving in mud or water.
- When driving through water, maintain low speed and do not stop in the water.

**WARNING**
After driving through water, press lightly on the brake pedal to ensure that the brakes are functioning normally. Water or mud can make the brake linings slippery, resulting in delayed braking effect.

**CAUTION**
- Engine damage will occur if water is drawn into the air cleaner.
- If the vehicle is driven through water deeper than 10 in (25 cm), water may enter the differential and the transmission. This reduces the oil’s lubricating capacity and may shorten the service life of these components.
- Do not allow the vehicle to stand in water up to the door sills longer than absolutely necessary. This could result in electrical malfunctions.
- If the engine has been stopped while the vehicle is in water, do not attempt to restart it. Have the vehicle towed out of the water.

**CAUTION**
- Engine damage will occur if water is drawn into the air cleaner.
- If the vehicle is driven through water deeper than 10 in (25 cm), water may enter the differential and the transmission. This reduces the oil’s lubricating capacity and may shorten the service life of these components.
- Do not allow the vehicle to stand in water up to the door sills longer than absolutely necessary. This could result in electrical malfunctions.
- If the engine has been stopped while the vehicle is in water, do not attempt to restart it. Have the vehicle towed out of the water.

**WARNING**
The cooling fan may start or continue to operate (for up to 6 minutes) after the engine has been switched off.

- Remove any auxiliary lights from in front of the grille when driving in hot weather conditions.
- Do not exceed engine speeds of 4500 rpm if driving with a trailer in hilly terrain. The oil temperature could become too high.

**Conserving electrical current**
Keep the following in mind to help minimize battery drain:
- When the engine is not running, avoid using ignition mode II. Many electrical systems (the audio system, the optional navigation system, power windows, etc) will function in ignition modes 0 and I. These modes reduce drain on the battery.
- Please keep in mind that using systems, accessories, etc., that consume a great deal of current when the engine is not running could result in the battery being completely drained. Driving or having the engine running for approximately 15 minutes will help keep the battery charged.

**Engine and cooling system**
Under special conditions, for example when driving in hilly terrain, extreme heat or with heavy loads, there is a risk that the engine and cooling system will overheat. Proceed as follows to avoid overheating the engine.
- Maintain a low speed when driving with a trailer up long, steep hills.
- Do not turn the engine off immediately when stopping after a hard drive.
Driving recommendations

Before a long distance trip
It is always worthwhile to have your vehicle checked by a trained and qualified Volvo service technician before driving long distances. Your retailer will also be able to supply you with bulbs, fuses, spark plugs and wiper blades for your use in the event that problems occur.

As a minimum, the following items should be checked before any long trip:

- Check that engine runs smoothly and that fuel consumption is normal.
- Check for fuel, oil, and fluid leakage
- Have the transmission oil level checked.
- Check condition of drive belts.
- Check state of the battery’s charge.
- Examine tires carefully (the spare tire as well), and replace those that are worn. Check tire pressures.
- The brakes, front wheel alignment, and steering gear should be checked by a trained and qualified Volvo service technician only.
- Check all lights, including high beams.
- Reflective warning triangles are legally required in some states/provinces.
- Have a word with a trained and qualified Volvo service technician if you intend to drive in countries where it may be difficult to obtain the correct fuel.

- Consider your destination. If you will be driving through an area where snow or ice are likely to occur, consider snow tires.

Cold weather precautions
If you wish to check your vehicle before the approach of cold weather, the following advice is worth noting:

- Make sure that the engine coolant contains 50 percent antifreeze. Any other mixture will reduce freeze protection. This gives protection against freezing down to –31 °F (–35 °C). The use of "recycled" antifreeze is not approved by Volvo. Different types of antifreeze must not be mixed.
- Volvo recommends using only genuine Volvo antifreeze in your vehicle’s radiator.
- Try to keep the fuel tank well filled – this helps prevent the formation of condensation in the tank. In addition, in extremely cold weather conditions it is worthwhile to add fuel line de-icer before refueling.
- The viscosity of the engine oil is important. Oil with low viscosity (thinner oil) improves cold-weather starting as well as decreasing fuel consumption while the engine is warming up. 0W-30 oil is recommended for driving in areas with sustained low temperatures.
- The load placed on the battery is greater during the winter since the windshield wipers, lighting, etc., are used more often.

Moreover, the capacity of the battery decreases as the temperature drops. In very cold weather, a poorly charged battery can freeze and be damaged. It is therefore advisable to check the state of charge more frequently and spray an anti-rust oil on the battery posts.

- Volvo recommends the use of snow tires on all four wheels for winter driving, see page 286.

- To prevent the washer fluid reservoir from freezing, add washer solvents containing antifreeze. This is important since dirt is often splashed on the windshield during winter driving, requiring the frequent use of the washers and wipers. Volvo Washer Solvent should be diluted as follows: Down to 14 °F (–10 °C): 1 part washer solvent and 4 parts water Down to 5 °F (–15 °C): 1 part washer solvent and 3 parts water Down to 0 °F (–18 °C): 1 part washer solvent and 2 parts water Down to –18 °F (–28 °C): 1 part washer solvent and 1 part water.

- Use Volvo Teflon Lock Spray in the locks.
- Avoid using de-icing sprays as they can cause damage to the locks.
Fuel requirements

Deposit control gasoline (detergent additives)
Volvo recommends the use of detergent gasoline to control engine deposits. Detergent gasoline is effective in keeping injectors and intake valves clean. Consistent use of deposit control gasolines will help ensure good drivability and fuel economy. If you are not sure whether the gasoline contains deposit control additives, check with the service station operator.

NOTE
Volvo does not recommend the use of external fuel injector cleaning systems.

Unleaded fuel
Each Volvo has a three-way catalytic converter and must use only unleaded gasoline. U.S. and Canadian regulations require that pumps delivering unleaded gasoline be labeled "UNLEADED". Only these pumps have nozzles which fit your vehicle's filler inlet. It is unlawful to dispense leaded fuel into a vehicle labelled "unleaded gasoline only". Leaded gasoline damages the three-way catalytic converter and the heated oxygen sensor system. Repeated use of leaded gasoline will lessen the effectiveness of the emission control system and could result in loss of emission warranty coverage. State and local vehicle inspection programs will make detection of misfueling easier, possibly resulting in emission test failure for misfueled vehicles.

NOTE
Some U.S. and Canadian gasolines contain an octane enhancing additive called methylcyclopentadienyl manganese tricarbonyl (MMT). If such fuels are used, your Emission Control System performance may be affected, and the Check Engine Light (malfunction indicator light) located on your instrument panel may light. If this occurs, please return your vehicle to a trained and qualified Volvo service technician for service.

Gasoline containing alcohol and ethers, "Oxygenated fuels"
Some fuel suppliers sell gasoline containing "oxygenates" which are usually alcohols or ethers. In some areas, state or local laws require that the service pump be marked indicating use of alcohols or ethers. However, there are areas in which the pumps are unmarked. If you are not sure whether there is alcohol or ethers in the gasoline you buy, check with the service station operator. To meet seasonal air quality standards, some areas require the use of "oxygenated" fuel.

Volvo allows the use of the following "oxygenated" fuels; however, the octane ratings listed on page 258 must still be met.

Alcohol – Ethanol
Fuels containing up to 10% ethanol by volume may be used. Ethanol may also be referred to as Ethyl alcohol, or "Gasohol".

Ethers – MTBE: Fuels containing up to 15% MTBE may be used.

Methanol
Do not use gasolines containing methanol (methyl alcohol, wood alcohol). This practice can result in vehicle performance deterioration and can damage critical parts in the fuel system. Such damage may not be covered under the New Vehicle Limited Warranty.
07 During your trip

Refueling

Octane rating

Minimum octane

Minimum Octane Rating
(R + M)/2 Method

87

Typical pump octane label

Volvo recommends premium fuel for best performance, but using 87 octane\(^1\) or above will not affect engine reliability.

Demanding driving

In demanding driving conditions, such as operating the vehicle in hot weather, towing a trailer, or driving for extended periods at higher altitudes than normal, it may be advisable to switch to higher octane fuel (91 or higher) or to change gasoline brands to fully utilize your engine’s capacity, and for the smoothest possible operation.

**NOTE**

When switching to higher octane fuel or changing gasoline brands, it may be necessary to fill the tank more than once before a difference in engine operation is noticeable.

**Fuel Formulations**

Do not use gasoline that contains lead as a knock inhibitor, and do not use lead additives. Besides damaging the exhaust emission control systems on your vehicle, lead has been strongly linked to certain forms of cancer.

Many fuels contain benzene as a solvent. Unburned benzene has been strongly linked to certain forms of cancer. If you live in an area where you must fill your own gas tank, take precautions. These may include:

- standing upwind away from the filler nozzle while refueling
- refueling only at gas stations with vapor recovery systems that fully seal the mouth of the filler neck during refueling
- wearing neoprene gloves while handling a fuel filler nozzle.

**Use of Additives**

With the exception of gas line antifreeze during winter months, do not add solvents, thickeners, or other store-bought additives to your vehicle’s fuel, cooling, or lubricating systems. Overuse may damage your engine, and some of these additives contain organically volatile chemicals. Do not needlessly expose yourself to these chemicals.

**WARNING**

Never carry a cell phone that is switched on while refueling your vehicle. If the phone rings, this may cause a spark that could ignite gasoline fumes, resulting in fire and injury.

**WARNING**

Carbon monoxide is a poisonous, colorless, and odorless gas. It is present in all exhaust gases. If you ever smell exhaust fumes inside the vehicle, make sure the passenger compartment is ventilated, and immediately return the vehicle to a trained and qualified Volvo service technician for correction.

---

\(^1\) AKI (ANTI KNOCK INDEX) is an average of the Research Octane Number (RON) and the Motor Octane Number (MON), MON+RON/2.
Opening/closing the fuel filler door

The fuel filler door is located on the right rear fender (indicated by an arrow beside the fuel tank symbol on the information display).

With the ignition switched off, press and release the button on the lighting panel to unlock the fuel filler door. Please note that the fuel filler door will remain unlocked until the vehicle begins to move forward. An audible click will be heard when the fuel filler door relocks.

- If you intend to leave your vehicle while it is being refueled, this feature enables you to lock the doors/trunk while leaving the fuel filler door unlocked.
- You can also keep the vehicle locked if you remain inside it during refueling. The central locking button does not lock the fuel filler door.
- Be sure the fuel filler door is not obstructed and is completely closed after refueling.
- Open the fuel filler cap slowly during hot weather.

Close the fuel filler door by pressing it; a click indicates that it is closed.

CAUTION

- Avoid spilling gasoline during refueling. In addition to causing damage to the environment, gasolines containing alcohol can cause damage to painted surfaces, which may not be covered under the New Vehicle Limited Warranty.

Manually opening the fuel filler door

If necessary, the fuel filler door can be opened manually:

1. Open the side hatch in the trunk (on the same side as the fuel filler door).
2. Grasp the green cord with a handle.
3. Gently pull the cord straight rearward until the fuel filler door clicks open.
Refueling

Opening/closing the fuel cap

Fuel vapor expands in hot weather. Open the filler cap slowly.

After refueling, close the fuel filler cap by turning it clockwise until it clicks into place.

**CAUTION**

- Do not refuel with the engine running\(^2\). Turn the ignition off or to position I. If the ignition is on, an incorrect reading could occur in the fuel gauge.
- Avoid overfilling the fuel tank. Do not press the handle on the filler nozzle more than one extra time. Too much fuel in the tank in hot weather conditions can cause the fuel to overflow. Overfilling could also cause damage to the emission control systems.

Emission controls

**Three-way catalytic converter**

- Keep your engine properly tuned. Certain engine malfunctions, particularly involving the electrical, fuel or distributor ignition systems, may cause unusually high three-way catalytic converter temperatures. Do not continue to operate your vehicle if you detect engine misfire, noticeable loss of power or other unusual operating conditions, such as engine overheating or backfiring. A properly tuned engine will help avoid malfunctions that could damage the three-way catalytic converter.
- Do not park your vehicle over combustible materials, such as grass or leaves, which can come into contact with the hot exhaust system and cause such materials to ignite under certain wind and weather conditions.
- Excessive starter cranking (in excess of one minute), or an intermittently firing or flooded engine can cause three-way catalytic converter or exhaust system overheating.
- Remember that tampering or unauthorized modifications to the engine, the Engine Control Module, or the vehicle may be illegal and can cause three-way catalytic converter or exhaust system overheating. This includes: altering fuel injection settings or components, altering emission system components or location or removing components, and/or repeated use of leaded fuel.

**NOTE**

Unleaded fuel is required for vehicles with three-way catalytic converters.

---

\(^2\) If the fuel filler cap is not closed tightly or if the engine is running when the vehicle is refueled, the Check Engine Light (malfunction indicator lamp) may indicate a fault. However, your vehicle’s performance will not be affected. Use only Volvo original or approved fuel filler caps.
Heated oxygen sensors
The heated oxygen sensors monitor the oxygen content of the exhaust gases. Readings are fed into a control module that continuously monitors engine functions and controls fuel injection. The ratio of fuel to air into the engine is continuously adjusted for efficient combustion to help reduce harmful emissions.
Introduction
The load carrying capacity of your vehicle is determined by factors such as the number of passengers, the amount of cargo, the weight of any accessories that may be installed, etc.

To increase loading space, the rear seat backrests can be folded down, see page 89.

When loading the trunk, keep the following in mind:

- Load objects in the trunk against the backrest whenever possible.
- Unstable loads can be secured to the load anchoring eyelets with straps or web lashings to help keep them from shifting.
- Stop the engine and apply the parking brake when loading or unloading long objects. The gear selector can be knocked out of position by long loads, which could set the vehicle in motion.

**WARNING**
- Stop the engine, put the gear selector in P, and apply the parking brake when loading or unloading long objects.
- The vehicle’s driving characteristics may change depending on the weight and distribution of the load.
- A 44-pound (20 kg) object produces a force of 2,200 pounds (1,000 kg) in a head-on collision at 30 mph (50 km/h).
- The rear seat should not be loaded to a level higher than 2 in. (5 cm) below the upper edge of the rear side windows. Objects placed higher than this level could impede the function of the Volvo Inflatable Curtain.

Folding down the rear seat backrests
The rear seat backrests can be folded down for additional loading space, see page 90.

Load anchoring eyelets
The load anchoring eyelets on both sides of the vehicle are used to fasten straps, etc., to help anchor items in the trunk.

* Option/accessory, for more information, see Introduction.*
WARNING

- Cover sharp edges on long loads to help prevent injury to occupants. Secure the load to help prevent shifting during sudden stops.
- Always secure large and heavy objects with a seat belt or cargo retaining straps.
- Always secure the load to help prevent it from moving in the event of sudden stops.
- Switch off the engine, apply the parking brake and put the gear selector in P when loading and unloading the vehicle.

Grocery bag holder*

The grocery bag holder holds shopping bags in place.
1. Open the hatch in the floor of the trunk.
2. Secure the shopping bags with the strap.

Ski hatch

There is a hatch in the right section of the rear seat backrest that can be opened for transportation.
1. Fold the right backrest forward.
2. Release the hatch in the rear seat backrest by sliding the catch up while folding the hatch forward.
3. Return the backrest to the upright position with the hatch open.
Use the seat belt to prevent the load from moving.

Grocery bag holder under the floor of the trunk
07 During your trip

Loading

**WARNING**

- Always secure the load to help prevent it from moving in the event of sudden braking.
- Switch off the engine, apply the parking brake and put the gear selector in **P** when loading and unloading the vehicle.

The cover on the rear seat armrest/child seat has no hinge. The cover must be removed before the ski hatch is used.

**Removal:**
- Open the cover 30 degrees and lift straight up.

**Installation:**
- Insert the cover in the grooves behind the upholstery and close the cover.

**Roof loads**

**Using load carriers**

Load carriers are available as Volvo accessories. Observe the following points when in use:
- To avoid damaging your vehicle and to achieve maximum safety when driving, we recommend using the load carriers that Volvo has developed especially for your vehicle.
- Volvo-approved removable roof racks are designed to carry the maximum allowable roof load for this vehicle: 220 lbs (100 kg). For non-Volvo roof racks, check the manufacturer's weight limits for the rack.
- Never exceed the rack manufacturer’s weigh limits and never exceed the maximum rated roof load of 220 lbs (100 kg).
- Avoid single-point loads. Distribute loads evenly.
- Place heavier cargo at the bottom of the load.
- Secure the cargo correctly with appropriate tie-down equipment.
- Check periodically that the load carriers and load are properly secured.
- Remember that the vehicle’s center of gravity and handling change when you carry a load on the roof.
- The vehicle’s wind resistance and fuel consumption will increase with the size of the load.
- Drive smoothly. Avoid rapid starts, fast cornering and hard braking.
Introduction

Volvo recommends the use of Volvo trailer hitches that are specially designed for the vehicle.

NOTE

See page 344 for the maximum trailer and tongue weights recommended by Volvo.

- Observe the legal requirements of the state/province in which the vehicles are.
- All Volvo models are equipped with energy-absorbing shock-mounted bumpers. Trailer hitch installation should not interfere with the proper operation of this bumper system.

Trailer towing does not normally present any particular problems, but take into consideration:

- Increase tire pressure to recommended full pressure. See the tire inflation table on page 279.
- When your vehicle is new, avoid towing heavy trailers during the first 620 miles (1,000 km).
- Maximum speed when towing a trailer: 50 mph (80 km/h).
- Engine and transmission are subject to increased loads. Therefore, engine coolant temperature should be closely watched when driving in hot climates or hilly terrain. Use a lower gear and turn off the air conditioner if the temperature gauge needle enters the red range.
- If the automatic transmission begins to overheat, a message will be displayed in the text window.
- Avoid overload and other abusive operation.
- Hauling a trailer affects handling, durability, and economy.
- It is necessary to balance trailer brakes with the towing vehicle brakes to provide a safe stop (check and observe state/local regulations).
- Do not connect the trailer’s brake system directly to the vehicle’s brake system.
- More frequent vehicle maintenance is required.
- Remove the ball holder when the hitch is not being used.
- Volvo recommends the use of synthetic engine oil when towing a trailer over long distances or in mountainous areas.

WARNING

- Bumper-attached trailer hitches must not be used on Volvos, nor should safety chains be attached to the bumper.
- Trailer hitches attaching to the vehicle rear axle must not be used.
- Never connect a trailer’s hydraulic brake system directly to the vehicle brake system, nor a trailer's lighting system directly to the vehicle lighting system. Consult your nearest authorized Volvo retailer for correct installation.
- When towing a trailer, the trailer's safety wire must be correctly fastened to the hole or hook provided in the trailer hitch on the vehicle. The safety wire should never be fastened to or wound around the drawbar ball.
Towing a trailer

**NOTE**

- When parking the vehicle with a trailer on a hill, apply the parking brake before putting the gear selector in P. Always follow the trailer manufacturer’s recommendations for wheel chocking.
- When starting on a hill, put the gear selector in D before releasing the parking brake. See also page 125 for more detailed information about starting off on a hill while towing a trailer.
- If you use the manual (Geartronic) shift positions while towing a trailer, make sure the gear you select does not put too much strain on the engine (using too high a gear).
- The drawbar assembly/trailer hitch may be rated for trailers heavier than the vehicle is designed to tow. Please adhere to Volvo’s recommended trailer weights.
- Avoid driving with a trailer on inclines of more than 15%.

**Trailer cable**

An adapter is required if the vehicle’s trailer hitch has a 13-pin connector and the trailer has 7 pins. Use an adapter cable approved by Volvo. Make sure the cable does not drag on the ground.

**Detachable trailer hitch (accessory)**

![Detachable trailer hitch diagram]

- **A** Ball holder
- **B** Locking bolt
- **C** Cotter pin
- **D** Hitch assembly
- **E** Safety wire attachment

**Installing the ball holder**

1. If necessary, remove the cotter pin from the locking bolt and slide the locking bolt out of the hitch assembly.
2. Slide the ball holder into the hitch assembly.
3. Align the hole in the ball holder with the one in the hitch assembly.
4. Slide the locking bolt through the hitch assembly/ball holder.
5. Insert the cotter pin in the hole at the end of the locking bolt.

**Removing the ball holder**

1. Remove the cotter pin from the locking bolt and slide the locking bolt out of the ball holder/hitch assembly.
2. Pull the ball holder out of the hitch assembly.

**NOTE**

A cover for the hitch assembly is also included in the kit.

**Trailer Stability Assist (TSA)**

Trailer Stability Assist is a system designed to help stabilize a vehicle that is towing a trailer when the vehicle and trailer have begun to sway and is part of the Dynamic Stability and Traction Control system (DSTC). See page 130 for information on DSTC.

**Function**

A vehicle towing a trailer may begin to sway for various reasons. Normally this only occurs at high speeds but, for example, if the trailer is overloaded or if the load is unevenly distributed in the trailer, there is risk of swaying at speeds...
Towing a trailer

between approximately 45-55 mph (70-90 km/h).

Swaying may be caused by factors such as:

- The vehicle and trailer are hit by a sudden, strong crosswind
- The vehicle and trailer are traveling on an uneven road surface or drive over a bump
- Sudden movements of the steering wheel

Facts about TSA

- TSA intervenes at speeds above approximately 40 mph (60 km/h)
- The DSTC symbol (▲) in the instrument panel will flash when TSA is working
- If the driver switches off the DSTC system’s Spin Control function, TSA will also be switched off (but will be on again the next time the engine is started)
- TSA may not intervene when the vehicle and trailer begin to sway if the driver tries to compensate for the swaying motion by moving the steering wheel rapidly

How TSA works

Once swaying has begun, it can be very difficult to stop, which makes it difficult to control the vehicle and trailer.

The TSA system continuously monitors the vehicle’s movements, particularly lateral movement. If the system detects a tendency to sway, the brakes are applied individually on the front wheels, which has a stabilizing effect on the vehicle and trailer. This is often enough to enable the driver to regain control of the vehicle.

If this is not adequate to stop the swaying motion, the brakes are applied to all of the wheels on the vehicle and on the trailer if it is equipped with brakes, and engine power is temporarily reduced. As the swaying motion begins to decrease and the vehicle-trailer have once again become stable, TSA will no stop regulating the brakes/engine power and the driver regains control of the vehicle.
Emergency towing

Towing eyelet

1 The towing eyelet is located under the floor of the trunk. This eyelet must be screwed into the positions provided on the right sides of either the front or rear bumper (see illustration).

2 There are two different types of covers over the openings for the towing eyelet and they have to be opened differently.
   - If the cover has a notch, insert a coin, etc., into the notch and pry open the edge of the cover. Open the cover completely and remove it.
   - If the cover has a mark along one edge or in a corner, press the mark while prying out the opposite side/corner using a coin, etc. Open the cover and remove it.

Screw the towing eyelet in place, first by hand and then using the tire iron until it is securely in place.

After the vehicle has been towed, the eyelet should be removed and returned to its storage location.

Press the cover for the attachment point back into position.

NOTE
On certain models equipped with a trailer hitch, the towing eyelet cannot be screwed into the hole in the rear bumper. The towing rope should be attached to the trailer hitch instead. For this reason, the detachable section of the trailer hitch should be safely stowed in the vehicle at all times.
During your trip

Emergency towing

---

**WARNING**

- When the vehicle is being towed, the ignition should be in mode II (in mode I, all of the vehicle’s airbags are deactivated). See page 85 for more information about ignition modes.
- Never remove the remote key from the ignition slot when the vehicle is being towed. For vehicles with keyless drive, the remote key must remain inside the vehicle.
- The power brakes and power steering will not function when the engine is not running. Approximately 5 times more pressure will be required on the brake pedal and the steering wheel will be considerably harder to turn.
- The towing eyelets must not be used for pulling the vehicle out of a ditch or for any similar purpose involving severe strain. Do not use the towing eyelets to pull the vehicle up onto a flat bed tow truck.

---

**Towing the vehicle**

1. With the remote key fully pressed into the ignition slot\(^1\), press **START/STOP ENGINE** for approximately 2 seconds to activate ignition mode II.
2. The remote key must remain in the ignition slot\(^2\) for the entire time that the vehicle is being towed.
3. Keep the tow rope taut when the towing vehicle slows down by applying light pressure on the brake pedal. This will help prevent jarring movements of the vehicle being towed.
4. Be prepared to apply the brakes to stop the vehicle being towed.

---

**CAUTION**

General towing precautions:

- Please check with state and local authorities before attempting this type of towing, as vehicles being towed are subject to regulations regarding maximum towing speed, length and type of towing device, lighting, etc.
- If the vehicle’s battery is dead, attach jumper cables (see page 116) to provide current for releasing the electric parking brake and to move the gear selector from the P position to N. If this is not possible, see page 120 for information about manually overriding the shiftlock system to move the gear selector from P to N.
- Maximum speed: 50 mph (80 km/h). Do not exceed the maximum allowable towing speed.
- Maximum distance with front wheels on ground: 50 miles (80 km).
- The vehicle should only be towed in the forward direction.

---

\(^1\) Not necessary in vehicles with the optional keyless drive.
\(^2\) For vehicles with the optional keyless drive, the remote key must be in the vehicle.
Having the vehicle towed by a tow truck

Call for professional help from an authorized towing company. Volvo recommends the use of flat bed equipment.

⚠️ CAUTION

- The vehicle should always be towed in the forward direction.
- Vehicles with All Wheel Drive (AWD)* that are being towed with the front wheels off the ground should not be towed at a speed above approx. 45 mph (70 km/h) and should not be towed farther than 30 miles (50 km).
- If the vehicle is being towed on a flat bed truck, the towing eyelet must not be used to pull the vehicle up onto the flat bed or to secure the vehicle on the flat bed. Consult the tow truck operator.
WHEELS AND TIRES
General information

Introduction
Your vehicle is equipped with tires according to the vehicle’s tire information placard on the B-pillar (the structural member at the side of the vehicle, at the rear of the driver’s door opening).

**CAUTION**
Some Volvo models are equipped with an Ultra High Performance tire and wheel combination designed to provide maximum dry pavement performance with consideration for hydroplaning resistance. They may be more susceptible to road hazard damage and, depending on driving conditions, may achieve a tread life of less than 20,000 miles (30,000 km). Even if this vehicle is equipped with Volvo’s advanced AWD or DSTC system, these tires are not designed for winter driving, and should be replaced with winter tires when weather conditions dictate.

The tires have good road holding characteristics and offer good handling on dry and wet surfaces. It should be noted however that the tires have been developed to give these features on snow/ice-free surfaces.

Most models are equipped with "all-season" tires, which provide a somewhat higher degree of road holding on slippery surfaces than tires without the "all-season" rating. However, for optimum road holding on icy or snow-covered roads, we recommend suitable winter tires on all four wheels.

When replacing tires, be sure that the new tires are the same size designation, type (radial) and preferably from the same manufacturer, on all four wheels. Otherwise there is a risk of altering the car’s roadholding and handling characteristics.

**New Tires**

Remember that tires are perishable goods. As of 2000, the manufacturing week and year (Department of Transportation (DOT) stamp) will be indicated with 4 digits (e.g., 1510 means that the tire illustrated was manufactured during week 15 of 2010).

**Tire rotation**
Your vehicle has no required tire rotation. Tire wear is affected by a number of factors such as tire inflation, ambient temperature, driving style, etc.

**NOTE**
- If the tires are rotated, they should only be moved from front to rear or vice versa. They should never be rotated left to right/right to left.
- Ideally, tire rotation should be done the first time after approximately 3,000 miles (5,000 km) and thereafter at 6,000-mile (10,000-km) intervals. Some customers find that tire rotation may help to get extra mileage from tire life.
- Tire rotation should only be performed if front/rear tire wear is fairly even and tread height is above 1/16" (1.6 mm).

**Tire age**
Tires degrade over time, even when they are not being used. It is recommended that tires generally be replaced after 6 years of normal service. Heat caused by hot climates, frequent high loading conditions or Ultra Violet (U.V.) exposure can accelerate the aging process. The temporary spare¹ should also be replaced

¹ Option or accessory on some models
at 6-year intervals, even if it has never been used.

A tire’s age can be determined by the DOT stamp on the sidewall (see the illustration).

A tire with e.g., visible cracks or discoloration should be replaced immediately.

**Tread wear indicator**

The tires have wear indicator strips running across or parallel to the tread. The letters TWI are printed on the side of the tire. When approximately 1/16" (1.6 mm) is left on the tread, these strips become visible and indicate that the tire should be replaced. Tires with less than 1/16" (1.6 mm) tread offer very poor traction.

When replacing worn tires, it is recommended that the tire be identical in type (radial) and size as the one being replaced. Using a tire of the same make (manufacturer) will prevent alteration of the driving characteristics of the vehicle.

**Improving tire economy**

- Maintain correct tire pressure. See the tire inflation table on page 279.
- Drive smoothly: avoid fast starts, hard braking and tire screeching.
- Tire wear increases with speed.
- Correct front wheel alignment is very important.
- Unbalanced wheels impair tire economy and driving comfort.
- Tires must maintain the same direction of rotation throughout their lifetime.
- When replacing tires, the tires with the most tread should be mounted on the rear wheels to reduce the chance of oversteer during hard braking.
- Hitting curbs or potholes can damage the tires and/or wheels permanently.

**Summer and winter tires**

The arrows show the direction of rotation of the tire

- When switching between summer and winter tires, mark the tires to indicate where they were mounted on the car, e.g., LF = left front, RR = right rear
- Tires with tread designed to roll in only one direction are marked with an arrow on the sidewall.
- Incorrectly mounted tires impair the car’s braking properties and ability to force aside rain, snow and slush.
- The tires with the most tread should always be at the rear (to reduce the risk of skidding).
- Contact a Volvo workshop if you are unsure about the tread depth.
Storing wheels and tires
When storing complete wheels (tires mounted on rims), they should be suspended off the floor or placed on their sides on the floor.

Tires not mounted on rims should be stored on their sides or standing upright, but should not be suspended.

**CAUTION**
Tires should preferably be stored in a cool, dry, dark place, and should never be stored in close proximity to solvents, gasoline, oils, etc.

**WARNING**
- The wheel and tire sizes for your Volvo are specified to meet stringent stability and handling requirements. Unapproved wheel/tire size combinations can negatively affect your vehicle’s stability and handling.
- Any damage caused by installation of unapproved wheel/tire size combinations will not be covered by your new vehicle warranty. Volvo assumes no responsibility for death, injury, or expenses that may result from such installations.
Inflation placard

Tire inflation placard

Tire inflation
Check tire inflation pressure regularly.

See the tire inflation table on page 279. A tire inflation pressure placard is also located on the driver's side B-pillar (the structural member at the side of the vehicle, at the rear of the driver's door opening). This placard indicates the designation of the factory-mounted tires on your vehicle, as well as load limits and inflation pressure.

NOTE
- The placards shown indicate inflation pressure for the tires installed on the vehicle at the factory only.
- A certain amount of air seepage from the tires occurs naturally and tire pressure fluctuates with seasonal changes in temperature. Always check tire pressure regularly.
- Use a tire gauge to check the tire inflation pressure, including the spare\(^1\), at least once a month and before long trips. You are strongly urged to buy a reliable tire pressure gauge, as automatic service station gauges may be inaccurate.
- Use the recommended cold inflation pressure for optimum tire performance and wear.
- Under-inflation or over-inflation may cause uneven treadwear patterns.

WARNING
- Under-inflation is the most common cause of tire failure and may result in severe tire cracking, tread separation, or "blow-out," with unexpected loss of vehicle control and increased risk of injury.
- Under-inflated tires reduce the load carrying capacity of your vehicle.

When weather temperature changes occur, tire inflation pressures also change. A 10-degree temperature drop causes a corresponding drop of 1 psi (7 kPa) in inflation pressure. Check your tire pressures frequently and adjust them to the proper pressure, which can be found on the vehicle’s tire information placard or certification label.

Checking tire pressure
Cold tires
Inflation pressure should be checked when the tires are cold.

The tires are considered to be cold when they have the same temperature as the surrounding (ambient) air.

This temperature is normally reached after the vehicle has been parked for at least 3 hours.

\(^1\) Available as an accessory
08 Wheels and tires

Tire inflation

After driving a distance of approximately 1 mile (1.6 km), the tires are considered to be hot. If you have to drive farther than this distance to pump your tire(s), check and record the tire pressure first and add the appropriate air pressure when you get to the pump.

If checking tire pressure when the tire is hot, never "bleed" or reduce air pressure. The tires are hot from driving and it is normal for pressures to increase above recommended cold pressures. A hot tire at or below recommended cold inflation pressure could be significantly under-inflated.

To check inflation pressure:
1. Remove the cap from the valve on one tire, then firmly press the tire gauge onto the valve.
2. Add air to reach the recommended air pressure.
3. Replace the valve cap.
4. Visually inspect the tires to make sure there are no nails or other objects embedded that could puncture the tire and cause an air leak.
5. Check the sidewalls to make sure there are no gouges, cuts, bulges or other irregularities.
6. Repeat this procedure for each tire, including the spare².

**NOTE**
- If you overfill the tire, release air by pushing on the metal stem in the center of the valve. Then recheck the pressure with your tire gauge.
- Some spare tires (available as an accessory) require higher inflation pressure than the other tires. Consult the tire inflation pressure table on page 279 or see the inflation pressure placard.

<sup>A</sup> Run-flat tire  
<sup>B</sup> Available as an accessory

**NOTE**

Please consult a Volvo retailer’s Parts department for the most up-to-date specifications.
Federal law mandates that tire manufacturers place standardized information on the sidewall of all tires (see the illustration).

The following information is listed on the tire sidewall:

1. **215**: the width of the tire (in millimeters) from sidewall edge to sidewall edge. The larger the number, the wider the tire.
2. **65**: The ratio of the tire's height to its width in percent.
3. **R**: Radial tire (the designation RF and the symbol indicate that the vehicle is equipped with optional self-supporting run flat tires\(^1\). See page 300 for more information about these tires).
4. **15**: The diameter of the wheel rim (in inches).
5. **95**: The tire's load index. In this example, a load index of 95 equals a maximum load of 1521 lbs (690 kg).
6. **H**: The tire's speed rating, or the maximum speed at which the tire is designed to be driven for extended periods of time, carrying a permissible load for the vehicle, and with correct inflation pressure. For example, H indicates a speed rating of 130 mph (210 km/h).
7. **M+S or M/S = Mud and Snow, AT = All Terrain, AS = All Season**
8. **U.S. DOT Tire Identification Number (TIN)**: This begins with the letters "DOT" and indicates that the tire meets all federal standards. The next two numbers or letters are the plant code where it was manufactured, the next two are the tire size code and the last four numbers represent the week and year the tire was built. For example, 1510 means that the tire was manufactured during week 15 of 2010. The numbers in between are marketing codes used at the manufacturer’s discretion. This information helps a tire manufacturer identify a tire for safety recall purposes.
9. **Tire Ply Composition and Material Used**: Indicates the number of plies indicates or the number of layers of rubber-coated fabric in the tire tread and sidewall. Tire manufacturers also must indicate the ply materials in the tire and the sidewall, which include steel, nylon, polyester, and others.

\(^1\) Self-supporting run flat tires may not be available on all models
10. **Maximum Load**: Indicates the maximum load in pounds and kilograms that can be carried by the tire. Refer to the vehicle's tire information placard located on the B-Pillar for the correct tire pressure for your vehicle.

11. **Treadwear, Traction, and Temperature grades**: see page 285 for more information.

12. **Maximum permissible inflation pressure**: the greatest amount of air pressure that should ever be put in the tire. This limit is set by the tire manufacturer.
Glossary of tire terminology

Terms
The tire suppliers may have additional markings, notes or warnings such as standard load, radial tubeless, etc.

- **Tire information placard**: A placard showing the OE (Original Equipment) tire sizes, recommended inflation pressure, and the maximum weight the vehicle can carry.
- **Tire Identification Number (TIN)**: A number on the sidewall of each tire providing information about the tire brand and manufacturing plant, tire size and date of manufacturer.
- **Inflation pressure**: A measure of the amount of air in a tire.
- **Standard load**: A class of P-metric or Metric tires designed to carry a maximum load at 35 psi [37 psi (2.5 bar) for Metric tires]. Increasing the inflation pressure beyond this pressure will not increase the tire’s load carrying capability.
- **Extra load**: A class of P-metric or Metric tires designed to carry a heavier maximum load at 41 psi [43 psi (2.9 bar) for Metric tires]. Increasing the inflation pressure beyond this pressure will not increase the tire’s load carrying capability.
- **kPa**: Kilopascal, a metric unit of air pressure.
- **PSI**: Pounds per square inch, a standard unit of air pressure.
- **B-pillar**: The structural member at the side of the vehicle behind the front door.
- **Bead area of the tire**: Area of the tire next to the rim.
- **Sidewall of the tire**: Area between the bead area and the tread.
- **Tread area of the tire**: Area of the perimeter of the tire that contacts the road when mounted on the vehicle.
- **Rim**: The metal support (wheel) for a tire or a tire and tube assembly upon which the tire beads are seated.
- **Maximum load rating**: a figure indicating the maximum load in pounds and kilograms that can be carried by the tire. This rating is established by the tire manufacturer.
- **Maximum permissible inflation pressure**: the greatest amount of air pressure that should ever be put in the tire. This limit is set by the tire manufacturer.
- **Recommended tire inflation pressure**: inflation pressure, established by Volvo, which is based on the type of tires that are mounted on a vehicle at the factory. This information can be found on the tire inflation placard(s) located on the driver’s side B-pillar and in the tire inflation table in this chapter.
- **Cold tires**: The tires are considered to be cold when they have the same temperature as the surrounding (ambient) air. This temperature is normally reached after the vehicle has been parked for at least 3 hours.
 Loads
Properly loading your vehicle will provide maximum return of vehicle design performance.

Before loading your vehicle, familiarize yourself with the following terms for determining your vehicle’s weight ratings, with or without a trailer, from the vehicle’s Federal/Canadian Motor Vehicle Safety Standards (FMVSS/CMVSS) label, and the vehicle's tire information placard:

Curb weight
The weight of the vehicle including a full tank of fuel and all standard equipment. It does not include passengers, cargo, or optional equipment.

Capacity weight
All weight added to the curb weight, including cargo and optional equipment. When towing, trailer hitch tongue load is also part of cargo weight.

Gross vehicle weight (GVW)
The vehicle’s curb weight + cargo + passengers.

 Permissible axle weight
The maximum allowable weight that can be carried by a single axle (front or rear). These numbers are shown on the Federal/Canadian Motor Vehicle Safety Standards (FMVSS/CMVSS) label. The total load on each axle must never exceed its maximum permissible weight.

 Steps for Determining Correct Load Limit
1. Locate the statement “the combined weight of occupants and cargo should never exceed XXX pounds” on your vehicle’s placard.
2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.
3. Subtract the combined weight of the driver and passengers from XXX kilograms or XXX pounds.
4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the “XXX” amount equals 1400 lbs. and there will be five 150 lb. passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400 – 750 \((5 \times 150) = 650 \text{ lbs.})
5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.
6. If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual\(^1\) to determine how this reduces the available cargo and luggage load capacity of your vehicle.

\(^1\) See page 265.
**WARNING**

- Exceeding the permissible axle weight, gross vehicle weight, or any other weight rating limits can cause tire overheating resulting in permanent deformation or catastrophic failure.

- Do not use replacement tires with lower load carrying capacities than the tires that were original equipment on the vehicle because this will lower the vehicle’s GVW rating. Use only tires with the correct load carrying capacity. Consult your Volvo retailer for information.
Uniform Tire Quality Grading

Quality grading information

ALL PASSENGER VEHICLE TIRES MUST CONFORM TO FEDERAL SAFETY REQUIREMENTS IN ADDITION TO THESE GRADES

Quality grades can be found, where applicable, on the tire sidewall between the tread shoulder and maximum section width. For example:

Treadwear 200 Traction AA Temperature A

**TREADWEAR**
The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and many depart significantly from the norm due to variation in driving habits, maintenance practices and differences in road characteristics and climate.

**TRACTION**
The traction grades, from highest to lowest, are AA, A, B, and C, as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance. The traction grade assigned to this tire is based on braking (straight-ahead) traction tests and is not a measure of cornering (turning) traction.

**TEMPERATURE**
The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a minimum level of performance that all passenger vehicle tires must meet under the Federal Motor Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

**WARNING**
The traction grade assigned to this tire is based on braking (straight-ahead) traction tests and is not a measure of cornering (turning) traction.

**WARNING**
The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, under-inflation, or excessive loading, either separately or in combination, can cause heat buildup and tire failure.
Snow chains, snow tires, studded tires

Winter driving conditions

Snow chains
Snow chains can be used on your Volvo with the following restrictions:

- Snow chains should be installed on front wheels only. Use only Volvo approved snow chains.
- If accessory, aftermarket or "custom" tires and wheels are installed and are of a size different than the original tires and wheels, chains in some cases CANNOT be used. Sufficient clearances between chains and brakes, suspension and body components must be maintained.
- Some strap-on type chains will interfere with brake components and therefore CANNOT be used.
- All Wheel Drive models: Snow chains should only be installed on the front wheels.
- Certain size tires may not allow the assembly of snow chains/traction devices.

Consult your Volvo retailer for additional snow chain information.

CAUTION

- Check local regulations regarding the use of snow chains before installing.
- Use single-sided snow chains only.
- Always follow the chain manufacturer’s installation instructions carefully. Install chains as tightly as possible and retighten periodically.
- Never exceed the chain manufacturer’s specified maximum speed limit. (Under no circumstances should you exceed 31 mph (50 km/h).
- Avoid bumps, holes or sharp turns when driving with snow chains.
- The handling of the vehicle can be adversely affected when driving with chains. Avoid fast or sharp turns as well as locked wheel braking.

Snow tires, studded tires

Tires for winter use:

- Owners who live in or regularly commute through areas with sustained periods of snow or icy driving conditions are strongly advised to fit suitable winter tires to help retain the highest degree of traction.
- It is important to install winter tires on all four wheels to help retain traction during cornering, braking, and accelerating. Failure to do so could reduce traction to an unsafe level or adversely affect handling.
- Do not mix tires of different design as this could also negatively affect overall tire road grip.
- Winter tires wear more quickly on dry roads in warm weather. They should be removed when the winter driving season has ended.
- Studded tires should be run-in 300 – 600 miles (500 – 1000 km) during which the vehicle should be driven as smoothly as possible to give the studs the opportunity to seat properly in the tires. The tires should have the same rotational direction throughout their entire lifetime.

NOTE

Please consult state or provincial regulations restricting the use of studded winter tires before installing such tires.

1 Where permitted
Spare tire
A spare tire can be purchased for your vehicle as an accessory. Follow the instructions included with the spare tire regarding use and stowing in the vehicle. See also page 294 for additional information.
The vehicle is equipped with a tire sealing system that enables you to temporarily seal a hole in the tread surface and re-inflate a flat tire, or to adjust a tire’s inflation pressure.

The system consists of an air compressor, a container for the sealing compound, wiring to connect the system to the vehicle’s electrical system via one of the 12-volt sockets, and a hose used to connect the system to the tire’s inflation valve.

### NOTE
- The tire sealing system is only intended to seal holes on the tire’s tread area, not the sidewall.
- Tires with large holes or tears cannot be repaired with the tire sealing system.
- After use, stow the tire sealing system properly to help prevent rattling.

### WARNING
- After using the tire sealing system, the vehicle should not be driven farther than approximately 120 miles (200 km).
- Have the tire inspected by a trained and qualified Volvo service technician as soon as possible to determine if it can be permanently repaired or must be replaced.
- The vehicle should not be driven faster than 50 mph (80 km/h) while using a tire that has been temporarily repaired with the tire sealing system.
- After using the tire sealing system, drive carefully and avoid abrupt steering maneuvers and sudden stops.
Tire sealing system—overview

1. Speed limit sticker
2. On/Off switch
3. Electrical wire
4. Bottle holder (orange cover)
5. Protective hose cover
6. Air release knob
7. Hose
8. Bottle with sealing compound
9. Air pressure gauge

**WARNING**

Please keep the following points in mind when using the tire sealing system:

- The sealing compound bottle (no. 8 in the illustration) contains 1) rubber latex, natural and 2) ethanediol. These substances are harmful if swallowed.
- The contents of this bottle may cause allergic skin reactions or otherwise be potentially harmful to the respiratory tract, the skin, the central nervous system, and the eyes.

**Precautions:**

- Keep out of reach of children.
- Do not ingest the contents.
- Avoid prolonged or repeated contact with the skin.
- Wash thoroughly after handling.

**First aid:**

- Skin: Wash affected areas of skin with soap and water. Get medical attention if symptoms occur.
- Eyes: Flush with plenty of water for least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical attention if symptoms occur.

**NOTE**

- Inhalation: Move the exposed person to fresh air. If irritation persists, get medical attention.
- Ingestion: Do **NOT** induce vomiting unless directed to do so by medical personnel. Get medical attention.
- Disposal: Dispose of this material and its container to a hazardous or special waste collection point.

Do not break the seal on the bottle. This occurs automatically when the bottle is screwed into the holder.
Tire Sealing System

Tire sealing system—temporarily repairing a flat tire

Temporarily repairing a flat tire is done in two stages:

- **Stage 1:** The hole is sealed by pumping sealing compound into the tire. The car is then driven a short distance to distribute the sealing compound in the tire.

  **NOTE**
  Do not remove any foreign objects (nails, etc.) from the tire before using the sealing system.

  - **Stage 2:** The tire’s inflation pressure is checked and adjusted if necessary.

  **WARNING**
  - Never leave the tire sealing system unattended when it is operating.
  - Keep the tire sealing system away from children.
  - Be sure the vehicle is parked safely off the road and away from moving traffic.
  - Apply the parking brake.

  4. Unscrew the orange cover over the bottle holder and unscrew the cap on the bottle of sealing compound.

  **NOTE**
  Do not break the seal on the bottle. This occurs automatically when the bottle is screwed into the holder.

  5. Screw the bottle into the bottle holder.

  **WARNING**
  The bottle is equipped with a catch to keep it securely in place and help prevent sealing compound leakage. Once in place, the bottle cannot be unscrewed. This must be done by a trained and qualified Volvo service technician.

  6. Remove the valve cap from the tire’s inflation valve and screw the tire sealing system’s hose connector onto the valve as tightly as possible by hand.
7. Connect the electrical wire to the nearest 12-volt socket in the vehicle.

**NOTE**
Be sure that none of the other 12-volt sockets is being used while the compressor is in operation.

8. Start the vehicle’s engine.

**WARNING**
The vehicle’s engine should be running when the tire sealing system is used to avoid battery drain. Therefore, be sure the vehicle is parked in a well ventilated place, or outdoors, before using the system.

9. Start the tire sealing system’s compressor by pressing the on/off switch to position I.

**WARNING**
- Never stand next to the tire being inflated when the compressor is in operation.
- If cracks, bubbles, etc. form on the tire, switch off the compressor immediately.
- If there is visible damage to the sidewall or the rim, the tire cannot be repaired. The vehicle should not be driven if this occurs. Contact a towing service or Volvo On Call Roadside Assistance if applicable.

**NOTE**
The air pressure gauge will temporarily show an increase in pressure to approximately 88 psi (6 bar) while the sealing compound is being pumped into the tire. The pressure should return to a normal level after approximately 30 seconds.

10. Within seven minutes, inflate the tire to between 22—44 psi (1.8—3.0 bar). Switch off the compressor briefly to get a clear reading from the pressure gauge.

11. Switch off the compressor and disconnect the electrical wire from the 12-volt socket.

12. Unscrew the hose from the tire’s inflation valve and reinstall the valve cap.

13. Immediately drive the vehicle for approximately 2 miles (3 km) at a maximum speed of 50 mph (80 km/h) to distribute the sealing compound in the tire.

**CAUTION**
The compressor should not be used for more than 10 minutes at a time to avoid overheating.

**WARNING**
If the pressure remains below 22 psi (1.8 bar) after approximately seven minutes, turn off the compressor. In this case, the hole is too large to be sealed and the vehicle should not be driven.
Tire Sealing System

**CAUTION**

If your vehicle is equipped with the Tire Pressure Monitoring System (TPMS), the use of the sealing compound may lead to incorrect tire pressure readings or in rare cases, damage to the tire pressure sensor. Use the tire sealing system to check and adjust the damaged tire's inflation pressure.

**NOTE**

- Safely stow the tire sealing system in a convenient place as it will soon be used again to check the tire's inflation pressure.
- The empty bottle of sealing compound cannot be removed from the bottle holder. Consult a trained and qualified Volvo service technician to have the bottle removed and properly disposed of.

**WARNING**

If heavy vibrations, unsteady steering behavior, or noises should occur while driving, reduce speed and park the vehicle in a safe place. Recheck the tire for bumps, cracks, or other visible damage, and recheck its inflation pressure. If the pressure is below 19 psi (1.3 bar), do not continue driving. Have the vehicle towed to a trained and qualified Volvo service technician.

**Stage 2: Checking inflation pressure**

1. Connect the tire sealing system as described in stage 1.
2. Refer to the inflation pressure table in this chapter for the correct inflation pressure. If the tire needs to be inflated, start the tire sealing system's compressor. If necessary, release air from the tire by turning the air release knob counterclockwise.

**CAUTION**

The compressor should not be used for more than 10 minutes at a time to avoid overheating.

**WARNING**

If you interrupt your trip for more than 1 hour, check the inflation pressure in the damaged tire again before continuing.

**Replacing the sealing compound container**

The sealing compound container must be replaced if:

- the tire sealing system has been used to repair a tire
- the container's expiration date has passed (see the date on decal).

**NOTE**

- After use, the sealing compound bottle, the hose, and certain other system components must be replaced. Please consult your Volvo retailer for replacement parts.
- If the sealing compound bottle’s expiration date has passed, please take it to a Volvo retailer or a recycling station that can properly dispose of harmful substances.
Inflating tires
The tire sealing system can be used to inflate the tires. To do so:

1. Park the car in a safe place.
2. The compressor should be switched off. Ensure that the on/off switch is in position 0 (the 0 side of the switch should be pressed down).
3. Take out the electrical wire and hose.
4. Remove the valve cap from the tire’s inflation valve and screw the hose connector onto the valve as tightly as possible by hand.
5. Connect the electrical wire to the nearest 12-volt socket in the vehicle.
6. Start the vehicle’s engine.
7. Check the tire’s inflation pressure on the gauge. Switch off the compressor briefly to get a clear reading from the pressure gauge.
8. Refer to the tire inflation table in this chapter for the correct inflation pressure. If the tire needs to be inflated, start the tire sealing system’s compressor (press the on/off switch to position I). If necessary, release air from the tire by turning the air release knob counterclockwise.
9. Turn off the compressor (press the on/off switch to position 0) when the correct inflation pressure has been reached.
10. Unscrew the hose from the tire’s inflation valve and reinstall the valve cap.
11. Disconnect the electrical wire from the 12-volt socket.

WARNING
- The vehicle’s engine should be running when the tire sealing system is used to avoid battery drain. Therefore, be sure the vehicle is parked in a well ventilated place, or outdoors, before using the system. The parking brake should be securely applied and the gear selector should be in the P (park) position.
- Children should never be left unattended in the vehicle when the engine is running.

CAUTION
The compressor should not be used for more than 10 minutes at a time to avoid overheating.
Changing a wheel

Removing a wheel

Location of jack and tools

Spare wheel
The following instructions only apply if you have purchased an accessory temporary spare wheel for your vehicle. If there is no temporary spare wheel in your vehicle, please see page 288 for instructions on using the tire sealing system.

The accessory temporary spare wheel is provided in a bag that must be securely strapped in place in the trunk while the vehicle is being driven.

The spare wheel is only intended for temporary use. Replace it with a normal wheel as soon as possible. The vehicle’s handling may be altered by the use of the spare wheel. The correct tire pressure is stated in the tire pressure table on page 279 and in the tire inflation placard on the driver’s side door jamb at the rear of the driver’s door opening.

Vehicle with two loading hooks
Turn the handle on the spare wheel bag in toward the rear seat. Secure the stitched strap hooks in the loading eyelets. Secure the long strap in one of the loading eyelets, wrap the strap around the spare wheel and through the lower handle. Secure the short strap on the long strap. Secure in the other loading eyelet and tighten.

Vehicle with four loading hooks
Turn the handle on the spare wheel bag out toward you. Secure the stitched strap hooks in the front loading eyelets. Secure the long strap in one of the front loading eyelets, wrap the strap diagonally over the spare wheel and through the upper handle. Secure the short strap on the long strap. Secure in the rear loading eyelet and tighten.

WARNING
Current legislation prohibits the use of the “Temporary Spare” tire other than as a temporary replacement for a punctured tire. It must be replaced as soon as possible by a standard tire. Road holding and handling may be affected with the “Temporary Spare” in use.
**CAUTION**
The vehicle must never be driven with more than one temporary spare wheel.

**Taking out the spare wheel**
1. Release the bag's retaining straps.
2. Lift the bag out of the vehicle and remove the spare wheel from the bag.
3. Fold up the floor hatch in the trunk.
4. Remove the jack* and tools* from the foam block and change the wheels (see the instructions in the following section "Changing a wheel").
5. After changing wheels, return the jack and tools to the foam block and close the floor hatch.
6. If possible, place the wheel with the punctured tire in the bag.
7. If there is a wheel in the bag, strap the bag securely in place in the trunk.

**WARNING**
- If there is a wheel in the bag, the bag must be securely restrained using its straps and the load anchoring eyelets in the trunk. Carefully follow the instructions on page 294.
- If the wheel with the punctured tire is too big to fit in the bag, it should be securely restrained in the trunk using suitable straps, a net for anchoring cargo, etc.

**Changing a wheel**
1. Apply the parking brake and put the gear selector in P.
2. Take out the jack*, lug wrench*, the towing eyelet and the wheel cover removal tool* stowed under the floor of the trunk.
3. Remove the wheel cover (where applicable) using the removal tool or remove the wheel cover by hand.
4. Block the wheels that are on the ground with wooden blocks or large stones.
5. Screw the towing eyelet into the lug wrench as shown in the illustration.

**CAUTION**
The towing eyelet must be screwed into the lug wrench as far as possible.
Changing a wheel

6. With the vehicle still on the ground, use the lug wrench/towing eyelet to loosen the wheel nuts $\frac{1}{2} – 1$ turn by exerting downward (counterclockwise) pressure.

7. There are two jack attachment points on each side of the vehicle. Position the jack correctly in the attachment (see the illustration) and crank while simultaneously guiding the base of the jack to the ground. The base of the jack must be flat on a level, firm, non-slippery surface. Before raising the vehicle, check that the jack is still correctly positioned in the attachment.

8. Raise the vehicle until the wheel to be changed is lifted off the ground.

9. Unscrew the wheel nuts completely and remove the wheel.

**WARNING**

- The jack must correctly engage the jack attachment.
- Be sure the jack is on a firm, level, non-slippery surface.
- Never allow any part of your body to be extended under a vehicle supported by a jack.
- Use the jack intended for the vehicle when changing a tire. For any other job, use stands to support the vehicle.
- Apply the parking brake and put the gear selector in the Park (P) position.
- Block the wheels standing on the ground, use rigid wooden blocks or large stones.
- The jack should be kept well-greased and clean, and should not be damaged.
- No objects should be placed between the base of jack and the ground, or between the jack and the attachment bar on the vehicle.
NOTE
The jack provided with your vehicle is intended to be used only in temporary situations such as changing wheels in the event of a flat tire. Only the jack that came with your particular model should be used to lift the vehicle. If the vehicle needs to be lifted more frequently or for a prolonged period, using a garage jack or hoist is recommended. Always follow this device’s instructions for use.

Re-installing the wheel
1. Clean the contact surfaces on the wheel and hub.
2. Lift the wheel and place it on the hub.
3. Install the wheel nuts and tighten hand-tight. Using the lug wrench, tighten cross-wise until all nuts are snug.
4. Lower the vehicle to the ground and alternately tighten the bolts crosswise to 103 ft. lbs. (140 Nm).
5. Install the wheel cover (where applicable). The opening in the wheel cover for the tire’s inflation valve must be positioned over the valve.

Tighten the lug nuts
Tire Pressure Monitoring System (TPMS)

Introduction

NOTE

USA – FCC ID: KR5S122780002

This device complies with part 15 of the FCC rules. Operation is subject to the following conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

The tire pressure monitoring system uses sensors mounted in the tire valves to check inflation pressure levels. When the vehicle is moving at a speed of approximately 20 mph (30 km/h) or faster, these sensors transmit inflation pressure data to a receiver located in the vehicle.

When low inflation pressure is detected, TPMS will light up the tire pressure warning light ( ![Tire pressure low](image-url) ) (also referred to as a telltale) in the instrument panel and will display one of the following messages in the text window: Tire pressure low or Tire needs air now.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

1 Not available in all markets or in all models.
2 Available as an accessory
TPMS indicates low tire pressure but does not replace normal tire maintenance. For information on correct tire pressure, please refer to the tire inflation pressure table in this chapter or consult your Volvo retailer.

### Erasing warning messages

When a low tire pressure warning message has been displayed, and the tire pressure warning light has come on:

1. Use a tire pressure gauge to check the inflation pressure of all four tires.
2. Re-inflate the tire(s) to the correct pressure (consult the tire pressure placard or the inflation pressure table on page 279).
3. In certain cases, it may be necessary to drive the vehicle for several minutes at a speed of 20 mph (30 km/h) or faster. This will erase the warning text and the warning light will go out.

**WARNING**

Incorrect inflation pressure could lead to tire failure, resulting in a loss of control of the vehicle.

### Changing wheels with TPMS

Please note the following when changing or replacing the factory installed TPMS wheels/tires on the vehicle:

- Only the factory-mounted wheels are equipped with TPMS sensors in the valves.
- If the vehicle is equipped with a temporary spare tire, this tire does not have a TPMS sensor.
- If wheels without TPMS sensors are mounted on the vehicle, TIRE PRESS SYST SERVICE REQUIRED will be displayed each time the vehicle is driven above 25 mph (40 km/h) for 10 minutes or more.
- Once TPMS sensors are properly installed, the warning message should not reappear. If the message is still displayed, drive the vehicle for several minutes at a speed of 20 mph (30 km/h) or faster to erase the message.
- Volvo recommends that TPMS sensors be fitted on all wheels used on the vehicle. Volvo does not recommend moving sensors back and forth between sets of wheels.

**CAUTION**

When inflating tires with TPMS valves, press the pump's mouthpiece straight onto the valve to help avoid bending or otherwise damaging the valve.

### Recalibrating TPMS (Canadian models only)*

In certain cases, it may be necessary to re-calibrate TPMS to conform to Volvo's recommended tire inflation pressures (see the infla-
Tire Pressure Monitoring System (TPMS)

- The tire pressure table on page 279, for example, if higher inflation pressure is necessary when transporting heavy loads, etc.

- This is done in the vehicle's menu system. See page 189 for a description of the menu system.

To recalibrate:
1. Switch off the engine.
2. Inflate the tires to the desired pressure and put the ignition in mode I or II (see page 85 for additional information).
3. Press the MY CAR key in the center console control panel and select Settings ➔ Car settings ➔ Tyre pressure
4. Press OK/MENU, select Calibrate tyre pressure and press OK/MENU again.
5. Drive the vehicle at a speed above 25 mph (40 km/h) continuously for at least 10 minutes.
   > When the calibration message is no longer displayed, TPMS has been recalibrated to the new inflation pressure.

Self-supporting run flat tires (SST)*

Self-supporting run flat tires are available as optional equipment. The vehicle must be equipped with the Tire Pressure Monitoring System (TPMS) if tires of this type are installed.

- Tires of this type have specially reinforced sidewalls that make it possible to continue driving to a limited extent even though the tire has lost some or all of its inflation pressure.
- These tires are mounted on special rims (normal tires can also be mounted on these rims).

- If an SST tire loses inflation pressure, the yellow TPMS symbol illuminates in the instrument panel and a text message is also displayed. If this happens, reduce speed to not more than 50 mph (80 km/h). The tire should be replaced as soon as possible.

- Drive carefully; it may be difficult to determine which tire is damaged. To find the damaged tire, check the inflation pressure in all four tires.

WARNING
- SST tires should only be mounted by service technicians who are familiar with tires of this type.
- SST tires may only be mounted on vehicles equipped with TPMS.
- Do not drive faster than 50 mph (80 km/h) if TPMS indicates that a tire has lost inflation pressure.
- Do not drive farther than 50 miles (80 km) before replacing a damaged SST tire.
- Drive carefully and avoid e.g., hard braking or fast turns.
- SST tires must be replaced if they are damaged. A tire of this type cannot be repaired.
Introduction
Volvo advises you to follow the maintenance program outlined in the Warranty and Service Records Information booklet. This maintenance program contains inspections and services necessary for the proper function of your vehicle. The maintenance services contain several checks that require special tools and training, and therefore must be performed by a qualified technician. To keep your Volvo in top condition, specify time-tested and proven Genuine Volvo Parts and Accessories.

The Federal Clean Air Act – U.S.
The Federal Clean Air Act requires vehicle manufacturers to furnish written instructions to the ultimate purchaser to assure the proper servicing and function of the components that control emissions. These services, which are listed in the "Warranty and Service Records Information" booklet, are not covered by the warranty. You will be required to pay for labor and material used.

Maintenance
Your Volvo passed several major inspections before it was delivered to you, in accordance with Volvo specifications. The maintenance procedures outlined in the Warranty and Service Records Information booklet, many of which will positively affect your vehicle's emissions, should be performed as indicated. It is recommended that receipts for vehicle emission maintenance be retained in case questions arise concerning maintenance. Inspection and maintenance should also be performed anytime a malfunction is observed or suspected.

Applicable warranties – U.S./Canada
In accordance with applicable U.S. and Canadian regulations, the following list of warranties is provided.

- New Vehicle Limited Warranty
- Parts and Accessories Limited Warranty
- Corrosion Protection Limited Warranty
- Seat Belt and Supplemental Restraint Systems Limited Warranty
- Emission Design and Defect Warranty
- Emission Performance Warranty

These are the federal warranties; other warranties are provided as required by state/provincial law. Refer to your separate Warranty and Service Records Information booklet for detailed information concerning each of the warranties.

Periodic maintenance helps minimize emissions
Periodic maintenance will help keep your vehicle running well. Your Warranty and Service Records Information booklet provides a comprehensive periodic maintenance schedule up to 150,000 miles (240,000 km) of vehicle maintenance. The schedule includes components that affect vehicle emissions. This page describes some of the emission-related components.
**Owner maintenance**

Periodic maintenance requirements and intervals are described in your vehicle's Warranty and Service Records Information booklet.

The following points can be carried out between the normally scheduled maintenance services.

**Each time the car is refueled:**
- Check the engine oil level.
- Clean the windshield, windshield wipers, headlights, and taillights.

**Monthly:**
- Check cold tire pressure in all tires. Inspect the tires for wear.
- Check that engine coolant and other fluid levels are between the indicated "min" and "max" markings.
- Clean interior glass surfaces with a glass cleaner and soft paper towels.
- Wipe driver information displays with a soft cloth.
- Visually inspect battery terminals for corrosion. Corrosion may indicate a loose terminal connector, or a battery near the end of its useful service life. Consult your Volvo retailer for additional information.

**As needed:**
- Wash the car, including the undercarriage, to reduce wear that can be caused by a buildup of dirt, and corrosion that can be caused by salt residues.
- Clean leaves and twigs from air intake vents at the base of the windshield, and from other places where they may collect.

**NOTE**

Complete service information for qualified technicians is available online for purchase or subscription at www.volvotechinfo.com.

**Emission inspection readiness**

**What is an Onboard Diagnostic System (OBD II)?**

OBD II is part of your vehicle's computerized engine management system. It stores diagnostic information about your vehicle's emission controls. It can light the Check Engine light (MIL) if it detects an emission control "fault." A "fault" is a component or system that is not performing within an expected range. A fault may be permanent or temporary. OBD II will store a message about any fault.

**How do states use OBD II for emission inspections?**

Many states connect a computer directly to a vehicle's OBD II system. The inspector can then read "faults." In some states, this type of
Maintaining your car

inspection has replaced the tailpipe emission test.

How can my vehicle fail OBD II emission inspection?
Your vehicle can fail OBD II emission inspection for any of the following reasons.

- If your Check Engine (MIL) light is lit, your vehicle may fail inspection.
- If your vehicle’s Check Engine light was lit, but went out without any action on your part, OBD II will still have a recorded fault. Your vehicle may pass or fail, depending on the inspection practices in your area.
- If you had recent service that required disconnecting the battery, OBD II diagnostic information may be incomplete and “not ready” for inspection. A vehicle that is not ready may fail inspection.

How can I prepare for my next OBD II emission inspection?

- If your Check Engine (MIL) light is lit – or was lit but went out without service, have your vehicle diagnosed and, if necessary, serviced by a qualified Volvo technician.
- If you recently had service for a lit Check Engine light, or if you had service that required disconnecting the battery, a period of driving is necessary to bring the OBD II system to “ready” for inspection. A half-hour trip of mixed stop-and-go/high-way driving is typically needed to allow OBD II to reach readiness. Your Volvo retailer can provide you with more information on planning a trip.
- Maintain your vehicle in accordance with your vehicle’s maintenance schedule.
Opening and closing the hood

1. Turn the handle located under the left side of the dash approximately 20-25 degrees clockwise to release the hood lock.

2. Lift the hood slightly. Press the release control (located under the right front edge of the hood) to the left, and lift the hood.

**WARNING**
Check that the hood locks properly when closed.

Engine compartment, overview

1. Coolant expansion tank
2. Power steering fluid reservoir
3. Dipstick-engine oil
4. Filler cap-engine oil
5. Cover over brake fluid reservoir
6. Battery
7. Relay/fuse box
8. Washer fluid reservoir

The appearance of the engine compartment may vary depending on engine model.

**WARNING**
The cooling fan (located at the front of the engine compartment, behind the radiator) may start or continue to operate (for up to 6 minutes) after the engine has been switched off.

**WARNING**
Before performing any operations in the engine compartment, the ignition should always be completely switched off (in mode 0, see page 85) and there should be no remote keys in the passenger compartment. The gear selector should be in the P (park) position. If the engine has been running, wait until it has cooled before touching any components in the engine compartment.

The distributor ignition system operates at very high voltages. Special safety precautions must be followed to prevent injury. Always turn the ignition off when:

- Replacing distributor ignition components e.g. plugs, coil, etc.
- Do not touch any part of the distributor ignition system while the engine is running. This may result in unintended movements and body injury.
Checking the engine oil

The oil level should be checked at regular intervals, particularly during the period up to the first scheduled maintenance service.

- See page 346 for oil specifications.
- Refer to the Warranty and Service Records Information booklet for information on the oil change intervals.

**CAUTION**

- Not checking the oil level regularly can result in serious engine damage if the oil level becomes too low.
- Oil that is lower than the specified quality can damage the engine.
- Volvo does not recommend the use of oil additives.
- Always add oil of the same type and viscosity as already used.
- Never fill oil above the **MAX** mark. This could cause an increase in oil consumption.
- Oil changes should be carried out by a trained and qualified Volvo service technician.

Checking and adding oil

**NOTE**

Before checking the oil:

- The car should be parked on a level surface.
- **If the engine is warm,** wait for at least 10 – 15 minutes after the engine has been switched off.

The oil level must be between the **MIN** and **MAX** marks on the dipstick

Checking the oil

1. Pull out the dipstick and wipe it with a lint-free rag.
2. Reinsert the dipstick, pull it out, and check the oil level. The level must be between the **MIN** and **MAX** marks.
3. Add oil if necessary. If the level is close to the MIN mark, add approximately 0.5 US quarts (0.5 liters) of oil.

4. Recheck the level and add more oil if necessary until the level is near the MAX mark.

**WARNING**

Do not allow oil to spill onto or come into contact with hot exhaust pipe surfaces.
Coolant

Location of the coolant reservoir

Normally, the coolant does not need to be changed. If the system must be drained, consult a trained and qualified Volvo service technician.

See page 347 for information on cooling system capacities.

⚠️ CAUTION

- If necessary, top up the cooling system with Volvo Genuine Coolant/Antifreeze only (a 50/50 mix of water and anti-freeze).
- Different types of antifreeze/coolant may not be mixed.
- If the cooling system is drained, it should be flushed with clean water or premixed anti-freeze before it is refilled with the correct mixture of water/anti-freeze.
- The cooling system must always be kept filled to the correct level, and the level must be between the MIN and MAX marks. If it is not kept filled, there can be high local temperatures in the engine which could result in damage. Check coolant regularly!
- Do not top up with water only. This reduces the rust-protective and anti-freeze qualities of the coolant and has a lower boiling point. It can also cause damage to the cooling system if it should freeze.
- Do not use chlorinated tap water in the vehicle's cooling system.

⚠️ WARNING

- Never remove the expansion tank cap while the engine is warm. Wait until the engine cools.
- If it is necessary to top off the coolant when the engine is warm, unscrew the expansion tank cap slowly so that the overpressure dissipates.

Brake fluid

Location of the brake fluid reservoir

Checking the level

The fluid reservoir is concealed under the round cover at the rear of the engine compartment. The round cover must be removed first before the reservoir cap can be accessed.
The brake fluid should always be between the MIN and MAX marks on the inside of the reservoir. Check, without removing the cap, that there is sufficient fluid in the reservoir.

**Fluid type:** DOT 4+ boiling point >536 °F (>280 °C), P/N 9437433

**Replace:** The fluid should be replaced according to the intervals specified in the Warranty and Service Records Information booklet.

When driving under extremely hard conditions (mountain driving, etc), it may be necessary to replace the fluid more often. Consult a trained and qualified Volvo service technician.

Always entrust brake fluid changing to a trained and qualified Volvo service technician.

**WARNING**

- If the fluid level is below the MIN mark in the reservoir or if a brake-related message is shown in the information display: **DO NOT DRIVE.** Have the car towed to a trained and qualified Volvo service technician and have the brake system inspected.

- Dot 4+ should never be mixed with any other type of brake fluid.

**Filling**

1. Turn and open the cover.

2. Unscrew the reservoir cap and fill the fluid. The level must be between the MIN and MAX marks.

**Power steering fluid**

Check the level frequently. The fluid does not require changing. The fluid level must be between the MIN and MAX marks. For capacities and recommended fluid grade, see page 347.

**WARNING**

If a problem should occur in the power steering system or if the vehicle has no electrical current and must be towed, it is still possible to steer the vehicle. However, keep in mind that greater effort will be required to turn the steering wheel.

**CAUTION**

Keep the area around the power steering fluid reservoir clean when checking.
Replacing bulbs

Introduction
All bulb specifications are listed on page 317. The following bulbs should only be replaced by a trained and qualified Volvo service technician:

- Dome lighting
- Reading lights
- Glove compartment lighting
- Footwell lighting
- Turn signals in the door mirrors
- Approach lighting in the door mirrors
- Active Bending Lights and LED bulbs

**NOTE**
For information regarding any other bulbs not mentioned in this section, please contact your Volvo retailer or a trained and authorized Volvo service technician.

**WARNING**
- The engine should not be running when changing bulbs.
- If the engine has been running just prior to replacing bulbs in the headlight housing, please keep in mind that components in the engine compartment will be hot.

**NOTE**
- Always switch off the ignition before starting to replace a bulb.
- The optional Active Bending Light bulbs contain trace amounts of mercury. These bulbs should always be disposed of by a trained and qualified Volvo service technician.

**CAUTION**
Never touch the glass of bulbs with your fingers. Grease and oils from your fingers vaporize in the heat and will leave a deposit on the reflector, which will damage it.

**Headlight housing**
The entire headlight housing must be lifted out when replacing all front bulbs.

---

* Option/accessory, for more information, see Introduction.
Removing the headlight housing
1. Switch off the ignition by briefly pressing the START/STOP ENGINE button.
2. Remove the remote key from the ignition slot 1.
3. (Upper illustration under "Headlight housing")
   1. Withdraw the headlight housing’s locking pins.
   2. Remove the headlight housing by alternatively pulling the front and rear edges until it can be lifted out.

! CAUTION
When disconnecting the connector, pull on the connector itself and not on the wiring.

4. (Lower illustration under "Headlight housing")
   3. Unplug the wiring connector by holding down the clip with your thumb.
   4. Pull out the connector with the other hand.
5. Lift out the housing and place it on a soft surface to avoid scratching the lens.

6. Replace the defective bulb(s).

Reinserting the headlight housing
1. Plug in the connector until it clicks into place.
2. Reinstall the headlight housing and locking pins. The short locking pin should be closest to the grille. Check that they are correctly inserted. The headlight housing must be properly inserted and secured in place before the lighting is switched on or the remote key is inserted into the ignition slot.
3. Check that the lights function properly.

Removing the cover to access the bulbs

NOTE
Before starting to replace a bulb, see page 312.

1. Loosen the cover’s four retaining screws with the tool (1) provided in the vehicle’s tool kit (see page 294). The screws should not be removed completely.
Replacing bulbs

**CAUTION**
Use the tool from the vehicle's tool kit to loosen the screws. A screwdriver or other sharp object could scratch the headlight.

2. Push the cover to the side. Reinstall the cover in the reverse order.

**Low beam, Halogen**

1. Remove the headlight housing from the vehicle (see page 312).
2. Remove the cover over the bulbs (see page 313).
3. Unplug the connector from the bulb.
4. Remove the bulb by pulling it straight out.
5. The guide lug on the new bulb should be straight up when the bulb is inserted into the holder and the bulb should snap into place.
6. Put the cover back into position and reinstall the headlight housing.

**High beam, Halogen**

1. Remove the headlight housing from the vehicle (see page 312).
2. Remove the cover over the bulbs (see page 313).
3. Remove the bulb by turning it counterclockwise and pulling it straight out.
4. Remove the connector from the bulb.
5. Press the new bulb into the socket and turn it clockwise to put it in place. It can only be secured in one position.
6. Reinsert the bulb holder into the headlight housing.
7. Put the cover back into position and reinstall the headlight housing.

**Extra high beam**

1. Remove the headlight housing from the vehicle (see page 312).
2. Remove the cover over the bulbs (see page 313).

# Extra high beam

2 Models with optional Active Bending Lights only.
3. Remove the bulb by turning it counterclockwise and pulling it straight out.
4. Remove the connector from the bulb.
5. Press the new bulb into the socket and turn it clockwise to put it in place. It can only be secured in one position.
6. Put the cover back into position and reinstall the headlight housing.

**Replacing bulbs**

**Turn signals**

1. Remove the headlight housing from the vehicle (see page 312).
2. Remove the cover by pulling it straight out.
3. Pull the holder to access the bulb.
4. Press in the bulb and turn it to remove it from the holder.

5. Press and turn the new bulb into place.
6. Reinsert the bulb holder into the headlight housing.
7. Put the cover back into position and reinstall the headlight housing.

**Taillight housing**

The bulbs in the taillight cluster are replaced from inside the trunk (not the LED functions).

**NOTE**

Before starting to replace a bulb, see page 312.

1. Remove the covers in the left/right panel to access the bulb holder.
2. Press the catches together and pull out the bulb holder.
3. Remove the defective bulb by pressing it in slightly and turning counterclockwise before pulling it out.
4. Insert a new bulb, press it in slightly and turn it clockwise.
5. Press the bulb holder until it clicks into place and reinstall the cover.

**Location of taillight bulbs**

Taillight lens, right side

1. Brake lights (LEDs)
2. Brake light
3. Backup light
Replacing bulbs

4. Turn signals
5. Rear fog light (driver’s side only)

NOTE
If an error message remains in the display after a faulty bulb has been replaced, contact an authorized Volvo workshop.

Backup lights

1. Open the panel on the inside of the trunk lid.
2. Remove the bulb holder by turning it counterclockwise.
3. Remove the defective bulb by pressing it in slightly and turning it counterclockwise before pulling it out.

4. Insert a new bulb, press it in slightly and turn it clockwise.
5. Put the bulb holder in place and turn it clockwise.

License plate lighting

1. Remove the screws with a screwdriver.
2. Carefully detach the entire bulb housing and pull it out.
3. Replace the bulb.
4. Reinsert the entire bulb housing and tighten the screws.

NOTE
Before starting to replace a bulb, see page 312.

The trunk lighting is located on opposite sides of the trunk.

1. Insert a screwdriver and gently turn so that the bulb housing comes loose.
2. Replace the bulb.
3. Check that the bulb illuminates and press it back into the bulb housing.
### Vanity mirror lighting

**Removing the lens**

1. Insert a screwdriver underneath the side of the lens and carefully pry up the lug on the edge.
2. Carefully detach and lift out the lens.
3. Use needle nose pliers to pull the bulb straight to the side. Replace the bulb. Do not exert too much pressure on the bulb with the pliers to help avoid damaging it.

**Reinstalling the lens**

1. Put the lens back into position.
2. Press it into place.

**NOTE**

Please consult a Volvo retailer’s Parts department for the most up-to-date specifications.
Wiper blades
The windshield wiper blades are different lengths. The blade on the driver’s side is longer than the one on the passenger side.

Service position

1. Insert the remote key into the ignition slot¹ and press the START/STOP ENGINE button briefly to put the ignition in mode I (see page 85 for detailed information about the ignition modes).
2. Press the START/STOP ENGINE button again briefly to switch the ignition off.
3. Within 3 seconds, move the right steering wheel lever up and hold it for at least 1 second.
   > The wipers will then move to the vertical (service) position on the windshield.

NOTE
After the wiper arms have been in the service position, the wipers must be switched on and off at least once before the service position can be used again.

Replacing the windshield wiper blades

¹ Not necessary on vehicles with the optional keyless drive.
With the wipers in the service position, fold out the wiper arm from the windshield. Press the button on the wiper blade attachment and pull the wiper blade straight out, parallel with the wiper arm.

Slide in the new wiper blade until it clicks into place.

Check that the blade is securely in place.

Press the wipers back against the windshield.

To return the wipers from the service position to the normal position, fold the wipers back against the windshield and press the START/STOP ENGINE button briefly to put the ignition in mode I (or start the engine).

Cleaning
Keeping the windshield and wiper blades clean helps improve visibility and prolongs the service life of the wiper blades. Clean the wiper blades with a stiff-bristle brush and lukewarm soap solution or car washing detergent.

Filling washer fluid

The windshield and headlight washers share a common reservoir. The washer fluid reservoir is located on the driver's side of the engine compartment. During cold weather, the reservoir should be filled with windshield washer solvent containing antifreeze. For capacities, see page 347.
Warning symbols on the battery

- **Wear protective goggles.**
- **Keep away from children.**
- **Avoid smoking, open flames, and/or sparks.**
- **See the owner’s manual.**
- **Contains corrosive acid.**

### Risk of explosion

### Recycle properly

### NOTE

A used battery should be disposed of in an environmentally responsible manner. Consult your Volvo retailer or take the battery to a recycling station.

### Handling

- Check that the battery cables are correctly connected and tightened.
- Never disconnect the battery when the engine is running (for example, when replacing the battery).
- If the battery is fully discharged a number of times, this may shorten its service life.
- The service life of a battery is affected by factors such as the number of starts, driving conditions and climate. Extreme cold may also further decrease the battery’s starting capacity.

- Because the battery’s starting capacity decreases with time, it may be necessary to recharge it if the vehicle is not driven for an extended period of time or if the vehicle is usually only driven short distances.
- Never use a quick charger to charge the battery.

### CAUTION

The infotainment system’s energy-saving feature may not function correctly or at all, and/or a message may be displayed if a battery charger or jumper cables are not connected properly.

- The negative terminal on the battery must **never** be used to connect a jumper cable or a battery charger. Only the ground point on the chassis may be used.

See page 116 for an illustration and additional information.
WARNING

• Never expose the battery to open flame or electric spark.
• Do not smoke near the battery.
• Battery fluid contains sulfuric acid. Do not allow battery fluid to contact eyes, skin, fabrics or painted surfaces. If contact occurs, flush the affected area immediately with water. Obtain medical help immediately if eyes are affected.

NOTE

The life of the battery is shortened if it becomes discharged repeatedly.

Maintenance

• Use a screwdriver to open the caps or cover and a flashlight to inspect the level.
• If necessary, add distilled water. The level should never be above the indicator.
• The fluid level should be checked if the battery has been recharged.
• After inspection, be sure the cap over each battery cell or the cover is securely in place.
• Check that the battery cables are correctly connected and properly tightened.

CAUTION

• Never disconnect the battery when the engine is running, or when the key is in the ignition. This could damage the vehicle’s electrical system.
• The battery should be disconnected from the vehicle when a battery charger is used directly on the battery.
• To help keep the battery in good condition, the vehicle should be driven for at least 15 minutes a week or connected to a charger with an automatic charging function.
• If the battery is fully discharged a number of times, this may shorten its service life. Keeping the battery fully charged helps prolong its service life.
• The service life of a battery is affected by factors such as driving conditions and climate. Extreme cold may also further decrease the battery’s starting capacity.
• Because the battery’s starting capacity decreases with time, it may be necessary to recharge it if the vehicle is not driven for an extended period of time or if the vehicle is usually only driven short distances.

Changing

1
2
3

CAUTION

• Always use distilled or deionized water (battery water).
• Never fill above the level mark in the cell.
Battery

**Removal**
Switch off the ignition, remove the remote key from the ignition slot and wait at least 5 minutes before disconnecting the battery so that all information in the vehicle’s electrical system can be stored in the control modules.

1. Open the clips on the front cover and remove the cover.
2. Release the rubber molding so that the rear cover is free.
3. Remove the rear cover by pulling it away.
4. Detach the black negative cable.
   - Detach the red positive cable
   - Detach the ventilation hose from the battery
   - Loosen the screw holding the battery clamp.
5. Move the battery to the side and lift it up.

**WARNING**
Connect and disconnect the positive and negative cables in the correct sequence.

**WARNING**

PROPOSITION 65 WARNING!
Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the state of California to cause cancer and reproductive harm. Wash hands after handling.

**Rally bar R-Design models**

Vehicles with the optional R-Design package are equipped with a rally bar in the engine compartment that must be removed before the battery can be replaced.

1. Remove the hatch in the bulkhead on both sides of the engine compartment (pry them up carefully with a plastic knife or similar object).
2. Remove the screw on each side of the engine compartment holding the rally bar in place.
3. Lift out the rally bar.
   - The battery can now be removed (see the instructions in the previous section).
After a new battery has been installed (see the following section), reinstall the rally bar in the reverse order.

**NOTE**

When reinstalling the rally bar, tighten the screws to 22 ft lbs (30 Nm).

**Installation**

1. Lower the battery into the battery box.

2. Move the battery inward and to the side until it reaches the rear edge of the box.

3. Tighten the clamp that secures the battery.

4. Connect the ventilation hose.
   > Be sure that it is correctly connected to the battery and the vent in the vehicle’s body.

5. Connect the red positive cable.

6. Connect the black negative cable.

7. Press in the rear cover. (See Removal).

8. Reinstall the molding. (See Removal).

9. Reinstall the front cover and secure it with the clips. (See Removal).
Replacing fuses
There are relay/fuse boxes located in the engine compartment, the passenger compartment, and the trunk.

If an electrical component fails to function, this may be due to a blown fuse. The easiest way to see if a fuse is blown is to remove it.

To do so:
1. Pull the fuse straight out. If a fuse is difficult to remove, a special fuse removal tool is located on the inside of the engine compartment fuse box cover.

2. From the side, examine the curved metal wire in the fuse to see if it is intact.

If the wire is broken, insert a new fuse of the same color and amperage (written on the fuse).

If fuses burn out repeatedly, have the electrical system inspected by a trained and qualified Volvo service technician.

⚠️ WARNING

Never use metal objects or fuses with higher amperage than those stated on the following pages. Doing so could seriously damage or overload the vehicle’s electrical system.
Engine compartment

A

B

C
### Fuses

A Engine compartment, upper  
B Engine compartment, front  
C Engine compartment, lower

#### Positions
These fuses are all located in the engine compartment box. Fuses in C are located under A.

#### NOTE
- Fuses 16 – 33 and 35 – 41 may be changed at any time when necessary.  
- Fuses 1 – 15, 34 and 42 – 44 are relays/circuit breakers and should only be removed or replaced by a trained and qualified Volvo service technician.  
- There is a special fuse removal tool on the underside of the cover.

NOTE

Please consult a Volvo retailer’s Parts department for the most up-to-date specifications.

* Option/accessory, for more information, see Introduction.
Vehicle care

Washing the car
The following points should be kept in mind when washing and cleaning the car:

- The car should be washed at regular intervals since dirt, dust, insects and tar spots adhere to the paint and may cause damage. To help prevent corrosion, it is particularly important to wash the car frequently in the wintertime.
- Avoid washing your car in direct sunlight. Doing so may cause detergents and wax to dry out and become abrasive. To avoid scratching, use lukewarm water to soften the dirt before you wash with a soft sponge, and plenty of sudsy water.
- **Bird droppings**: Remove from paintwork as soon as possible. Otherwise the finish may be permanently damaged.
- A detergent can be used to facilitate the softening of dirt and oil.
- Dry the car with a clean chamois and remember to clean the drain holes in the doors and rocker panels.
- Tar spots can be removed with tar remover after the car has been washed.
- A stiff-bristle brush and lukewarm soapy water can be used to clean the wiper blades. Frequent cleaning of the windshield and wiper blades improves visibility considerably and also helps prolong the service life of the wiper blades.
- Wash off the dirt from the underside (wheel housings, fenders, etc).
- In areas of high industrial fallout, more frequent washing is recommended.

**NOTE**
When washing the car, remember to remove dirt from the drain holes in the doors and sills.

**CAUTION**
- Avoid waxing or polishing plastic or rubber components
- Polishing chromed strips can wear away or damage the surface
- Polishes containing abrasive substances should not be used

Exterior components
Volvo recommends the use of special cleaning products, available at your Volvo retailer, for cleaning colored plastic, rubber, or ornamental components such as chromed strips on the exterior of your vehicle. The instructions for using these products should be followed carefully. Solvents or stain removers should not be used.

**CAUTION**
- Avoid high pressure washing, the spray mouthpiece must never be closer to the vehicle than 13” (30 cm). Do not spray into the locks.
- Dirt, snow, etc., on the headlights can reduce lighting capacity considerably. Clean the headlights regularly, for example when refueling.

Special moonroof cautions:
- Always close the moonroof and sun shade before washing your vehicle.
- Never use abrasive cleaning agents on the moonroof.
- Never use wax on the rubber seals around the moonroof.

Automatic car wash
- We do NOT recommend washing your car in an automatic wash during the first few months (because the paint will not have hardened sufficiently).
- An automatic wash is a simple and quick way to clean your car, but it is worth remembering that it may not be as thorough as when you yourself go over the car with sponge and water. Keeping the underbody clean is most important, especially in the winter. Some automatic washers do
not have facilities for washing the under-body.

**CAUTION**

- Before driving into an automatic car wash, turn off the optional rain sensor to avoid damaging the windshield wipers.
- Make sure that side view mirrors, auxiliary lamps, etc, are secure, and that any antenna(s) are retracted or removed. Otherwise there is risk of the machine dislodging them.
- **Chromed wheels**: Clean chrome-plated wheels using the same detergents used for the body of the vehicle. Aggressive wheel-cleaning agents can permanently stain chrome-plated wheels.

**WARNING**

- When the vehicle is driven immediately after being washed, apply the brakes, including the parking brake, several times in order to remove any moisture from the brake linings.
- Engine cleaning agents should not be used when the engine is warm. This constitutes a fire risk.

**Exterior lighting**

Condensation may form temporarily on the inside of the lenses of exterior lights such as headlights, fog lights, or taillights. This is normal and the lights are designed to withstand moisture. Normally, condensation will dissipate after the lights have been on for a short time.

**Polishing and waxing**

- Normally, polishing is not required during the first year after delivery, however, waxing may be beneficial.
- Before applying polish or wax the vehicle must be washed and dried. Tar spots can be removed with kerosene or tar remover. Difficult spots may require a fine rubbing compound.
- After polishing use liquid or paste wax.
- Several commercially available products contain both polish and wax.
- Waxing alone does not substitute for polishing a dull surface.
- A wide range of polymer-based waxes can be purchased today. These waxes are easy to use and produce a long-lasting, high-gloss finish that protects the bodywork against oxidation, road dirt and fading.

- Do not polish or wax your vehicle in direct sunlight (the surface of the vehicle should not be warmer than 113 °F (45 °C).

**CAUTION**

Volvo does not recommend the use of long-life or durable paint protection coatings, some of which may claim to prevent pitting, fading, oxidation, etc. These coatings have not been tested by Volvo for compatibility with your vehicle’s clear coat. Some of them may cause the clear coat to soften, crack, or cloud. Damage caused by application of paint protection coatings may not be covered under your vehicle’s paint warranty.

**Cleaning the interior**

Only use cleaning agents and car care products recommended by Volvo. Clean regularly and follow the instructions included with the car care product.

**Upholstery care**

**Fabric**

Clean with soapy water or a detergent. For more difficult spots caused by oil, ice cream, shoe polish, grease, etc., use a clothing/fabric stain remover. Consult your Volvo retailer.

**Alcantera™ suede-like material**

Suede-like upholstery can be cleaned with a soft cloth and mild soap solution.
Leather care
Volvo’s leather upholstery is manufactured with a protectant to repel soiling. Over time, sunlight, grease and dirt can break down the protection. Staining, cracking, scuffing, and fading can result.

Volvo offers an easy-to-use, non-greasy leather care kit formulated to clean and beautify your vehicle’s leather, and to renew the protective qualities of its finish. The cleaner removes dirt and oil buildup. The light cream protectant restores a barrier against soil and sunlight.

Volvo also offers a special leather softener that should be applied after the cleaner and protectant. It leaves leather soft and smooth, and reduces friction between leather and other finishes in the vehicle.

Volvo recommends cleaning, protecting and conditioning your vehicle’s leather two to four times a year. Ask your Volvo retailer about Leather Care Kit 951 0251 and Leather Softener 943 7429.

CAUTION
- Under no circumstances should gasoline, naphtha or similar cleaning agents be used on the plastic or the leather since these can cause damage.
- Take extra care when removing stains such as ink or lipstick since the coloring can spread.
- Use solvents sparingly. Too much solvent can damage the seat padding.
- Start from the outside of the stain and work toward the center.
- Sharp objects (e.g. pencils or pens in a pocket) or Velcro fasteners on clothing may damage the textile upholstery.
- Clothing that is not colorfast, such as new jeans or suede garments, may stain the upholstery.

Cleaning leather upholstery
1. Pour leather cleaner on a damp sponge and squeeze it until the cleaner foams.
2. Apply the foam to the stain by moving the sponge with circular movements.
3. Dampen the stain thoroughly with the sponge. Let the sponge absorb the stain, do not rub.
4. Dry the stain with soft paper towels or a towel, and allow the leather to dry completely.

Protecting leather upholstery
1. Put a small amount of protectant cream on a cloth and apply a thin coating of cream to the upholstery with light circular movements.
2. Allow the leather to dry for 20 minutes. This will help the leather resist staining and protect against sunlight’s harmful UV rays.

Cleaning a leather-covered steering wheel
- Remove soil, dust, etc., with a damp sponge and a neutral soap solution.
- Leather should be allowed to breath. Never cover the steering wheel with a plastic protector.
- Volvo recommends cleaning, protecting and conditioning the steering wheel with Volvo’s Leather Care Kit 951 0251 and Leather Softener 943 7429.
If there are stains on the steering wheel:

**Type 1** (ink, wine, coffee, milk, sweat or blood)
- Use a soft cloth or sponge. Wipe the wheel with a solution with 5% ammonia. For blood stains, mix approx. 1 cup (2 dl) of water and one ounce (25g) of salt and wipe the stain.

**Type 2** (fat, oil, sauces, or chocolate)
1. Same procedure as for type I stains.
2. Finish by rubbing the wheel with absorbent paper or a towel.

**Type 3** (dry soil or dust)
1. Remove the soil/dust with a soft brush.
2. Same procedure as for type I stains.

**CAUTION**
Sharp objects, such as rings, could damage the leather on the steering wheel.

Cleaning the seat belts
Clean only with lukewarm water and a mild soap solution.

Cleaning floor mats
The floor mats should be vacuumed or brushed clean regularly, especially during winter when they should be taken out for drying. Spots on textile mats can be removed with a mild detergent. For best protection in winter, Volvo recommends the use of Volvo rubber floor mats. Consult your Volvo retailer.

**Spots on interior plastic, metal, or wood surfaces**
Cleaning interior plastic components should be done with a cleaning agent specially designed for this purpose. Consult your Volvo retailer.

**Touching up paintwork**

![Paint code on the model plate](image)

**Paint code on the model plate**

Paint damage requires immediate attention to avoid rusting. Make it a habit to check the finish regularly, for instance washing the vehicle. Touch-up if necessary.

Paint repairs require special equipment and skill. Contact your Volvo retailer for any extensive damage.

Minor scratches can be repaired by using Volvo touch-up paint.

**Color code**
Make sure you have the right color. The color code number is stated on the model plate.

**Minor stone chips and scratches**
Material:
- Primer – can
- Paint – touch-up pen
- Brush
- Masking tape

If the stone chip has not gone down to the bare metal and an undamaged color coat remains, you can add paint immediately after removing dirt.

**NOTE**
When touching up the vehicle, it should be clean and dry. The surface temperature should be above 60 °F (15 °C).
**Minor scratches on the surface**
If the stone chip has not penetrated down to the metal and an undamaged layer of paint remains, the touch-up paint can be applied as soon as the spot has been cleaned.

**Repairing stone chips**

1. Place a strip of masking tape over the damaged surface. Pull the tape off so that any loose flakes of paint adhere to it.
2. Thoroughly mix the primer and apply it with a small brush.
3. When the primer surface is dry, the paint can be applied using a brush. Mix the paint thoroughly; apply several thin paint coats and let dry after each application.
4. If there is a longer scratch, you may want to protect surrounding paint by masking it off.
5. After a few days, polish the touched-up areas. Use a soft rag and a small amount of polish.

10 Specifications

Label information

Location of labels
List of labels

1 Model plate. Vehicle Identification Number (VIN). Codes for color and upholstery, etc. The model plate is located on the rear side of the B-pillar (the pillar between the front and rear passenger doors) and the rear passenger’s door must be open in order to see it.

2 Federal Motor Vehicle Safety Standards (FMVSS) specifications (USA) and Ministry of Transport (CMVSS) standards (Canada). Your Volvo is designed to meet all applicable safety standards, as evidenced by the certification label on the driver’s side B-pillar (the structural member at the side of the vehicle, at the rear of the driver’s door opening). For further information regarding these regulations, please consult your Volvo retailer.

3 Tire inflation pressures. This label indicates the correct inflation pressures for the tires that were on the vehicle when it left the factory. Canadian models have the upper decal; U.S. models have the lower one.

4 Vehicle Identification Number (VIN). The VIN plate is located on the top left surface of the dashboard. The Vehicle Identification Number (VIN) should always be quoted in all correspondence concerning your vehicle with the retailer and when ordering parts.

5 Vehicle Emission Control Information. Your Volvo is designed to meet all applicable emission standards, as evidenced by the certification label on the underside of the hood. For further information regarding these regulations, please consult your Volvo retailer.

**Oil specifications**

Engine oil must meet the minimum ACEA A5/B5. Lower quality oils may not offer the same fuel economy, engine performance, or engine protection.

**Oil additives must not be used.**

**Oil viscosity**

Incorrect viscosity oil can shorten engine life under normal use. SAE 5W-30 will provide good fuel economy and engine protection. See the viscosity chart.

**Extreme engine operation**

SAE 0W-30 oil meeting ACEA A5/B5 requirements is recommended for driving in areas with sustained low temperatures.

</table>

$^A$ Under normal driving conditions the transmission oil does not need changing during its service life. However, it may be necessary under adverse driving conditions.

$^B$ Models without headlight washers
Specifications

**Electrical system**

**General information**
12 volt system with a voltage-regulated alternator. Single pole system in which the chassis and engine block are used as conductors. The negative terminal is connected to the chassis.

</table>

**WARNING**

PROPOSITION 65 WARNING!
Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the state of California to cause cancer and reproductive harm. Wash hands after handling.

**CAUTION**

If the battery is replaced, replace it with a battery of the same cold start capacity and reserve capacity as the original (see the decal on the battery).
Introduction
The symbols in the vehicle’s various displays are divided into three main categories:
• Warning symbols
• Indicator symbols
• Information symbols

The following tables list the most common symbols, their meaning and the pages in this manual that provide more detailed information.

Warning symbol
The red warning symbol 🚨 lights up to indicate a problem related to safety and/or drivability. A message will also appear in the main instruments panel’s display.

Information symbol
The information symbol 🚩 lights up and a text message is displayed to provide the driver with necessary information about one of the vehicle’s systems.

Volvo programs

**Volvo On Call Roadside Assistance**
Your new Volvo comes with a four year ON CALL roadside assistance. Additional information, features, and benefits are described in a separate information package in your glove compartment.

If you require assistance, dial:

**In the U.S.** 1-800-638-6586 (1-800-63-VOLVO)

**In Canada** 1-800-263-0475

**Technician certification**
In addition to Volvo factory training, Volvo supports certification by the National Institute for Automotive Service Excellence (A.S.E.). Certified technicians have demonstrated a high degree of competence in specific areas. Besides passing exams, each technician must also have worked in the field for two or more years before a certificate is issued. These professional technicians are best able to analyze vehicle problems and perform the necessary maintenance procedures to keep your Volvo at peak operating condition.
